REPORT

TO

The Right Honourable Sir GEORGE GREY, Bart., G.C.B., M.P., Her Majesty's Principal Secretary of State for the Home Department, &c. &c. &c.

General Register Office, Somerset House,
30th April 1866.

SIR,

I HAVE the honour to submit to you my Annual Report for the year 1864.

360,774 persons married, 740,275 children were born alive, and 495,531 persons died. The names therefore of 1,596,580 persons were added during the year to the registers deposited and indexed in the office: it is the greatest number ever recorded in one year, and raises the total number to more than *thirty-five and a half millions* since the commencement of registration in 1837.

The natural increase of population by the excess of births over deaths was 244,744, or 669 daily. The population of England and Wales in the

1863	20,554,137	173,510	347,020	727,417	473,837	253,580
1864	20,772,308	180,387	360,774	740,275	495,531	244,744

* The Population of each of the years since 1851 is deduced from the ascertained rate of increase observed in the twenty years, 1841-61; and an allowance is made for the decrease in the rate during the latter ten years. On another hypothesis the numbers would differ slightly from the estimate here given, but as the rates of births, deaths, and marriages have been calculated on these numbers it is not considered advisable to give any other estimate of Population.

middle of 1864 probably amounted to about 20,772,308. The number of emigrants who left the ports of the United Kingdom at which Government agents are stationed during the year was 208,900; of whom 58,000 were of English origin, 15,319 of Scotch, 118,061 of Irish, and 17,520 were of foreign origin; the numbers are corrected proportionally for the 4877 whose birthplace was not recorded. Of the emigrants 147,042 departed for the United States, 12,721 for the North American colonies, 40,942 for the Australian colonies, and 8195 for other places.

Marriages.

Marriage in England is a public ceremony. It can only be performed in churches, in registered chapels, in Quakers' meeting houses, in synagogues; that is, in some recognized place of public worship, and in the office of the Superintendent Registrar. To render the contract valid, six persons must be present in the office; the Superintendent Registrar, the Marriage Registrar, two credible witnesses, the bridegroom, and the bride. The Superintendent Registrar receives the declarations; the Registrar records the particulars of the transaction; and all the six persons sign the register. In registered chapels the minister or the priest takes the place of the Superintendent Registrar; the presence of the Marriage Registrar is indispensable. This appears to be an excellent arrangement, as it relieves the minister of a secular duty. The Registrar is not present at marriages in churches of the Establishment; and this is in some respects to be regretted, as the clergy, who are very naturally wrapt in the sacred functions of their office, sometimes do not write the names distinctly, and sometimes omit to mention whether the marriage is by licence or by banns. Only five persons are necessarily present at marriages in churches, and sign the register.

Mean . .	·822	1·643	3·342	2·234	122	61	30	45

Note.—The Table may be read thus:—In the year 1838 to every 100,000 persons living there were 771 marriages or 1542 persons married, 3029 births, 2238 deaths; the number of persons living to every marriage, person married, birth or death, was 130, 65, 33, and 45 respectively. A correction for increase of population has been made in calculating the above results.

To prevent unsuitable marriages in moments of passion, or marriages within the prohibited degrees, or marriages of minors without the consent of their parents and lawful guardians, some delay is interposed between the expressed intention and the consummation of marriage, except in the Established Church, where a man who has resided 15 days in a parish can obtain a licence without notice from the surrogate, and be married in an hour. Special licence of the Archbishop of Canterbury allows marriage to be solemnized "at any convenient time and place." The most common practice is marriage after banns, proclaimed upon three

* In the case of mixed marriages between Protestants and Roman Catholics some couples are married twice, and are counted twice in the Registers.

several Sundays in the church or churches of the parishes in which the parties reside; thus involving a delay of at least 15 days.

The *licence* of the *Superintendent Registrar* can be obtained on due notice entered in the "Marriage Notice Book," kept open for inspection during one whole day; so the marriage of which notice is given at the register office on a Monday may be performed on the Wednesday following at that office, or at a registered place of worship, as stated in the notice. The *certificate* of the Superintendent Registrar is issued after a notice of 21 days, during which it is suspended in his office, while the particulars are recorded in the "Marriage Notice Book," always accessible to the public, and affording an opportunity for "forbidding" the marriage or for entering a "caveat." Upon the grant of the certificate the marriage may take place either in the register office or in a registered place of worship, with the consent of the officiating minister. Thus the marriages of the Roman

* Disregarding the decimal point, this will read: — 804 marriages were celebrated to every 100,000 of the population; of these, 910 may be taken to represent the marriages of the higher and middle classes, and 787 those of the classes below.

Catholics and of the members of all religious bodies, including Quakers and Jews, take place without hindrance, and without any other necessary delay than that required by law for the grant either of the licence or the certificate of the Superintendent Registrar.

14,611 marriages in the year were performed in the Superintendent Registrars' offices without any religious ceremony, and some of the parties were neither connected with the Church nor Dissent. But probably, as marriage is a civil contract by common law, many of the 14,611 men and 14,611 women were members of religious bodies. This class of marriages is very unequally distributed over the country. There are few such marriages in London; and of these a large proportion is performed in St. Pancras and Islington. The greater part of the civil marriages in the South-eastern Counties takes place at Portsmouth, (Portsea Island), Brighton, the Isle of Wight, and Southampton; in the South-western Counties at Plymouth and the contiguous districts, at Exeter, Truro, and Bath; in the Eastern Counties at Ipswich and Norwich; in the South Midland Counties at Northampton, Wycombe, Oxford, Bedford, Chesterton, and Cambridge; in the North Midland Counties at Bristol, Birmingham, Leicester, and Derby. The civil marriages were proportionally few in Cheshire and Lancashire, except in Bolton, Oldham, Rochdale, Haslingden, Burnley, and Blackburn; and they were not numerous in Yorkshire, except in Halifax, Huddersfield, Leeds, and York. The excessive number of marriages in the register offices of Durham and Northumberland is perhaps partly due to the presence of a large colliery population, and partly to the prevalence of a feeling against the publication of marriage.

In Carlisle the marriages in the register office are more than double the number of the marriages in the Established Church, and more than six times as numerous as the marriages in Nonconformist and Roman Catholic chapels. Upon looking back through the registers it is seen that there was a sudden increase of these marriages in the year 1857, and that increase has since been sustained.

44	North Wales - - - - - -	·746	65·1	51·3	4·09	11·46	15·35	8·55

The Table may be read thus by omitting the decimal points:—In England, among every 100,000 persons living 868 marriages took place; of 1,000 men married 767, of 1,000 women 676, signed the marriage register by writing their names; of 10,000 men married 662 were not of full age, of 10,000 women married 2009 were not of full age; of 10,000 men married 1384 were Widowers; of the same number of women married 907 were Widows.

This increase was a consequence of an Act of Parliament which passed in 1856, and contained the following clause :—

" After the 31st day of December 1856, no irregular marriage con-
" tracted in Scotland by declaration, acknowledgment, or ceremony, shall
" be valid, unless *one* of the parties had at the date thereof his or her
" usual place of residence there, or had lived in Scotland for *twenty-one*
" *days* next preceding such marriage ; any law, custom, or usage to the
" contrary notwithstanding."* This Act was levelled against Gretna Green marriages, and extinguished them ; at the same time it put a stop

* 19 & 20 Vict. cap. 96.

In my Thirteenth Annual Report, dated August 21st, 1854, addressed to Viscount Palmerston, who was then Secretary of State for the Home Department, a letter was inserted from a clergyman describing many of the evils of Gretna Green marriages (pp. vii and viii). I showed also to what an extent the marriages in the northern counties had been reduced by the Border marriages since the railways had afforded additional facilities to the lower classes for the trip into Scotland. Lord Brougham's Act was introduced in 1856, and came into force on January 1st, 1857.

It may be here stated that formerly several persons at Gretna and Springfield represented the Blacksmith, who in common story was wont to forge hymeneal fetters for runaway heiresses from England. Mr. John Linton, who established himself in 1825 at Gretna Hall, and converted it into an inn for the ease of lovers, himself performed the ceremony in an imposing costume, with a certain solemnity, and down to the year 1851 kept a register, which his widow informs me contains over 1,100 entries. In the year 1843 Mr. Murray, who kept the turnpike gate on the English side of the Border, effected a revolution by representing to English visitors, always in hot haste, that the further journey of two miles to Gretna Green was superfluous, as the wedding in his presence on the Scotch side of the border was equally valid. The argument was held to be conclusive; and Mr. Murray continued his operations uninterruptedly until in the year 1854 he registered no less than 746 marriages, 42 on one day ; in the year 1856

apparently to the common practice in Carlisle of crossing over the border to get married at the famous turnpike, without ceremony, in the easy irregular fashion of Scotland. The marriages in Carlisle before the year 1857 were much below the ordinary average of England; and since that date the marriages have been about the average. So it is evident that the class of people who formerly married in Scotland now marry in the register office at Carlisle. They avoid marriage in places of religious worship, and entertain strong objections to the proclamation of banns; for there are more marriages in the Established Church after licence than after banns in Carlisle, while the proportion generally is as one by church licence to six by banns. As marriage after banns is less common in Cumberland than in other counties, it is the more singular, and excites unusual attention, to which the couples about to marry are naturally sensitive.* They are in some cases willing to buy a licence to evade the ordeal, and in others, to avoid some of its severity, seek the quiet of the Superintendent's office.

In Cardiff, Neath, Swansea, and Merthyr Tydfil in South Wales, and Bangor and Conway in the North, many marriages are contracted in register offices.

Seamen and miners avail themselves most freely of the register offices; and it is stated that some of the people, who rarely go to a place of worship, would not marry at all if it were not possible to marry as easily as it is under the Registration Act. Such marriages, therefore, are not withdrawn from the Churches of the Establishment, or from the chapels of the Nonconformists, but from the ranks of immorality.

---

the numbers rose to 757. Then passed Lord Brougham's Act, and the entries fell to about 30 in 1857, and 41 in 1858. Mr. Murray's pleasant occupation was nearly at an end; the plant was ruthlessly uprooted; the soil of Scotland lost its cherished prerogative. He died in the year 1861.

The following letter from Mr. Robert Forster, himself a blacksmith, on the English side, who took an active part in pointing out the evils of Border marriages, is not without interest, now Gretna Green marriages are no longer an English institution:—

" Sir, Longtown, Thursday, March 8th, 1866.

" I have been to Sark Bridge and also at Gretna to-day. Mr. Murray's widow is still living at the house with part of the family. I saw her son James, and he consented to let me look at the register of the last year before Lord Brougham's Act came into operation; that was in 1856. There are 757 entries of marriages in that year; 20 of them took place on May 10th, that would be one of the days in the term week Whitsuntide, and on November 8th there are 39 entries of marriages, that would be one of the days in the term week at Martinmas. He told me there were far more entries than 39 in one day in some of the term week days if the books were searched. He told me it was a serious thing for them, as his father built the house for the very purpose of marriages.

" In 1857 there are only 30 entries of marriages altogether. In 1858 there are 41 entries altogether. When at Gretna I found Mr. Linton's widow was living at Annan with the marriage books of her husband in her possession. Several others used to keep books about Springfield; one of the main hands is named Douglas, a weaver by trade. If all the books that were kept were carefully looked into, it would reveal a fearful state of things, for any man that had a mind to keep a marriage book, and a few forms to fill up, was at liberty to start the system.

" I am, Sir,
" Yours most sincerely,
" ROBERT FORSTER."

* The subjoined note is from a gentleman well acquainted with the subject:—

" I have ascertained that the charge for a licence in Durham and Northumberland is 2*l.* 12*s.* 6*d.*, whilst in Cumberland it is 2*l.* 2*s.*, but the difference does not seem sufficient to account for the wide difference in the marriages by licence. There is certainly hereabouts a disinclination to publication of banns, on account of the notoriety it gives to the intended marriage, at which, in many country parishes, idle lads congregate, and often annoy the parties. That, I think, has caused many to prefer going to the expense of a licence, and when several do a thing of that kind it becomes a kind of fashion which others follow. I can see no other reason."

About eight marriages in ten are performed according to the rites of the Established Church; and of the eight, six are after proclamation of

* These are chiefly chapels of the "Wesleyan Methodist Free Church."

banns, which has the advantage in country places of publishing the contemplated act to all the parishioners, and giving parties interested and justified, an opportunity of "forbidding the banns." It seems to be admitted in these cases that the delay and the public proclamation of an act binding for life, affecting children unborn, and property to a variable extent, are useful, if not indispensable; but it happens that in large cities common names rapidly enunciated from the reading desk convey no information, and in cases where property or minors are concerned a licence can be purchased, which overrides every other security. The licence, descended from the age of indulgences,* is a fiscal advantage to officers of the English Church, and it is so popular among large classes that it can never be superseded, unless it is proved to be disadvantageous by decisive instances. The fee for a licence is a kind of fine on the parties for performing an act, without the usually recognized provisions against its evil consequences.

In Scotland marriages by licence are unknown; and regular marriages can only be solemnized after the payment of fees ranging from 5*s.* to 30*s.* for the publication of banns in the Established Churches of the parishes in which the parties have resided for six weeks. The banns are usually published on three consecutive Sundays; but in some parishes they may for a double fee be published on two Sundays, and for a treble fee on one Sunday. Thus the facility for an immediate marriage is sold in Scotland, as it is in England, to those who are willing to pay for it. The marriage is celebrated at the house of the minister, or the house of one of the parties.

In France the Registrar (Officier de l'Etat Civil), in all cases, proclaims the notice of marriage twice, at eight days' interval, and suspends it in front of the Town Hall (Maison Commune), or house in which the communal officers meet. Only three days after the last publication can marriage be celebrated.

Practically the marriages of the higher classes in England by licence, after complicated settlements, are probably entered on with more deliberation than the marriages of labourers and artisans by banns; but marriage by licence being more costly than marriage by banns, except in the north, it distinguishes classes, and is fashionable, so that nearly all people of the middle class and some artisans marry by licence, while all the labouring population marry by banns, or its equivalent certificate.

Marriages as far as the fees are concerned, may be thrown into two classes; (1) cheap marriages, and (2) dear marriages. The fees for marriage by licence vary in the several parishes, so do those by banns; but for the present purpose the fees for cheap marriages may be set down roughly at 12*s.*, and the fees for dear marriages at 64*s.* Thus the man who marries by licence pays about 52*s.* for the privilege.

The number of cheap marriages in the year 1864 was 153,808, which at 12*s.* each cost 92,285*l.*; while the number of dear marriages was 26,579, which at 64*s.* cost 85,053*l.* When the justly liberal fees of the wealthy in churches and chapels, as well as the subscriptions of the Roman Catholics, are taken into account, after allowing for poor places, the annual marriage fees in England are as likely to be more as they are

---

* By virtue of stat. 25 Hen. 8. c. 21. the Archbishop of Canterbury and his proper officers are empowered to grant faculties, dispensations, and licences, as the Pope had done before him. It is observed in the Report of the Lords Committee on the Law of Marriage (1823) that licences or dispensations from banns were originally intended exclusively for the use of persons of noble and illustrious quality, but that the usage of two centuries had extended them to the convenience of other classes of society. * * * The privilege of a *special licence* "permitting marriage at *any time*, in any church or chapel, or other meet and convenient place," however, is still restricted to persons of condition, * * * but does not bar the Archbishop of Canterbury from granting such favours beyond these specific limits in certain circumstances for the fee of about 30 guineas.—*Shelford, Law of Marriage*, pp. 259–60.

to be less than 200,000*l.*, of which the people who marry by licence,—one seventh of the total number,—may pay about the half.

The marriages of the year are classified in the Table VIII *a*.

And Table VIII *b*. exhibits the proportion of marriages of three kinds in counties. It will be observed that the proportion of marriages by licence varies considerably in the several counties.

Marriages are solemnized in more than 11 cases out of 12 by religious rites. While 8 married in register offices, 92 men per cent. married in churches, chapels, synagogues, and meeting houses in the face of their respective communities; the law now oppressing no conscience, but allowing the utmost freedom of choice, as far as religious ceremonial is concerned. Under this equal system 78 in 100 marriages are celebrated according to the rites of the Church of England; and 14 according to the rites of the various religious bodies. Exclusive of Roman Catholics, Jews, and Quakers, who all marry rigorously according to their own rites, and exclusive of the marriages in register offices, 156,710 marriages were celebrated; 15,627 at Nonconformist chapels, and 141,083 at churches. The marriages in the churches were in number to those in chapels as *nine* to *one*.

Up to the year 1837 marriage, except in the case of Quakers and Jews, could only be solemnized in England according to the rites of the English church; and much must be allowed for habit, and for what may, as in the case of the licence, be called fashion; much also for the appropriate, generous, and natural sentiments which the English marriage service embodies: but this high proportion of nine marriages at church to one at chapel is evidence of the willing acceptance by many Dissenters of a church rite unencumbered with sectarian shibboleths.*

TABLE VIII *a*.—**Marriages** in **England** and **Wales** in **1864** by **Licence** and **otherwise**.

		Numbers.	Proportions of each Class to 100 Marriages.
Dear Marriages, each costing for fees and stamps about 64*s*. on an average:—			
CLASS I. (1) At Churches on Licence granted by Ecclesiastical authority -	With Religious Ceremony	20,373	14·73
" (2) In Registered buildings on Superintendent Registrar's licence -	With Religious Ceremony	3,899†	
" (3) In the Register Office by Superintendent Registrar's licence -	Without Religious Ceremony	2,307†	
Cheap Marriages, each costing for fees about 12*s*. on an average:—			
CLASS II. (1) At Church after Banns - - -	With Religious Ceremony	116,349	78·45
" (2) At Church on Superintendent Registrar's Certificate - - -	With Religious Ceremony	4,361	
" (3) In Registered Buildings on Superintendent Registrar's Certificate† - - - - - - -	With Religious Ceremony	20,794	
CLASS III. (1) In the Register Office on Superintendent Registrar's Certificate -	Without Religious Ceremony	12,304	6·82

† The Licences granted by the Superintendent Registrars have been estimated at 6,206 from a return of 24,822 stamps issued by the Inland Revenue Department in the 4 years ending March 31st, 1865.

* "Anglo-Saxon ideas of female rights were just and liberal. Women were permitted to possess and dispose of property, nor was a person of any wealth enabled to marry, at all events, among his equals, until he had made a legal settlement upon his intended wife. It was, however, the usage of ancient England, as of cognate nations, to withhold the formal conveyance of this provision until the morning after marriage. Hence the dowry of an Anglo-Saxon lady was called her *morning's gift*. Her friends

The Marriage Act of Lord Hardwick, rendering the celebration by church rites indispensable, was not opposed by the Dissenters in 1752;

NOTE.—The results in this Table were obtained without distributing proportionately a certain number of Marriages in each county where the returns omitted to state under which of the heads, according to the rites of the Established Church, they should be referred, but the above proportions would, it is believed, remain unaffected by the correction.

had agreed upon a certain provision for her in the event of a proposed marriage; and until the contract was completed on her part, the husband was not expected to complete

and subsequently Unitarians were the leading successful agitators for greater freedom; for it was admitted on all hands, as the Church service implies a belief in the Trinity, that Unitarians had as good a claim to relief as Jews and Quakers. This they and all other Dissenters obtained under the Marriage Act of 1837; and every year the marriages at the chapels of Nonconformists are increasing.

I have before endeavoured to show that a general relation exists between the price of wheat and the number of marriages in England. But it may be inquired whether the price of wheat and the causes with which it is associated have the same influence on the upper and the lower classes of society.

Considerable difficulties lie in the way of such a classification; but if we assume that the population living in houses assessed at 20*l.* and upwards represents the class marrying by licence, then it will be possible to determine the influence of prices on the marriages of the lower and the higher classes.

This is done in Table IV.

The number of houses of the rent of 20*l.* and upwards assessed for duty was shown at the last Census to be 13·905 per cent. of the total number of inhabited houses of England and Wales*; in the year ending April 1865 it was 14·789; and by a singular coincidence the marriages by licence in the year 1864 are to the total marriages in nearly the same proportion, or 14·734 per cent. There is no constant relation between the two classes of facts in the several counties, where the fashion in respect to dwelling-houses bears no invariable relation to the fashion in respect to marriage by licence or otherwise. If, however, the population be divided into two sections, in numbers proportional to the two classes of houses, there will be 3,073,163 in the first section who may represent the class of people marrying by licence, while the remaining 17,699,145 may represent the class of people marrying in the cheaper fashion by banns or certificate.

The marriages by licence (26,579) bear nearly the same proportion to 3,073,163 people as the marriages by banns and certificate (153,808)

---

it on his. But although the preliminaries of marriage were necessarily civil, due care was taken for impressing it, upon the whole, with a very different character. The mass priest was to pronounce a solemn blessing at nuptial ceremonies, unless one or both of the parties had been married before."—*The Anglo-Saxon Church, its History, Revenues, and general character. By Rev. H. Soames, M.A.*, p. 278.

"The marriage contract by the old law appears to have been in England, as in most other states, essentially a civil contract, and it required no ecclesiastical sanction for its validity. * * * It is true that the Ecclesiastical Courts considered themselves as entitled to disavow all marriages not contracted according to ecclesiastical ordinances. * * * But at common law the marriage was good, and the heir of such a marriage would have inherited.

"In *Wigmore's* case, Salkeld, 438, Lord Chief Justice Holt is thus reported: 'By the common law a contract *per verba de præsenti* is a marriage, as '*I take you to be my wife.*' So it is of a contract *per verba de futuro*, '*I will take*,' &c.; if the contract be executed, and he do take her, it is a marriage, and the [ecclesiastical courts] cannot punish for fornication, but only for not solemnizing the marriage according to the forms prescribed by law, but not so as to declare the marriage void.'

"Marriage was by law (26 Geo. 2. c. 33.) made contractable only (except as to Jews and Quakers who are left in possession of the former freedom of *all* sects) according to the rites of the Church. The jealousy of the other sects seems to have given way and submitted to this compulsory conformity to the establishment.

"Convenience in registration, and general agreement in point of doctrine, as well perhaps as some attempts made to disturb their marriages in the ecclesiastical courts (see *Heydon* v. Gould, Salkeld, 119), had, it would appear, induced the Dissenters, except the Quakers, almost constantly in practice to resort to the Church for marriage. When the Marriage Act (1752) passed, therefore none but Jews and Quakers complained. Conformity as to all other persons became compulsory by the operation of this Act. * * * Evidence of Edgar Taylor, Esq., F.S.A., before Select Committee of House of Commons on Parochial Registration, pp. 81–2."

* Return by Inland Revenue Department.

bear to the 17,699,145 people; in one case it is ·865, in the other ·869 per cent.

If we make an estimate of the marriages by licence in previous years, and assume that the higher and lower classes are in nearly the same proportions as they were in the year 1861, it will be found that the proportions marrying in the two classes are no longer the same, but vary often in inverse directions, the general result being that among the classes marrying by banns and certificate high prices depress marriage, while if they have any effect on the class marrying by licence it is the reverse. See Table IV.

It may be interesting here to give the proportions of marriages to population in Scotland from the last Report of the Registrar General of that portion of the United Kingdom.

MARRIAGES to every 1000 of the population in the year 1862, the date of the last Report for Scotland.

	ENGLAND.	SCOTLAND.
By Rites of Established Churches - - -	6·38	3·02
By Rites of other Protestant Denominations, &c. -	·70	2·96
By Rites of Roman Catholics - - - -	·36	·58
By Civil Ceremony in England; irregularly, &c. in Scotland - - - - - - - -	·63	·12
	8·07	6·68

The greatest discrepancy arises under the last head. Marriage is not held valid in England unless it is registered by the public officer as well as performed in the presence of attesting witnesses, so that here no valid marriage is unregistered. That is not the case in Scotland.

In England as well as in Scotland a certain number of couples live together in a state of concubinage; but in Scotland the line which divides "irregular" marriage from concubinage is so indistinct that even the courts of justice are not always successful in tracing it. Dr. Stark believes that unregistered irregular marriages are few in Scotland, and are confined to the lowest classes: upon this assumption it is evident that marriage is not so frequent in the north as in the south.

The total registered marriages in the *United Kingdom* were 230,435 in the year 1864; the numbers for Scotland being unrevised, and those for Ireland probably defective as it was the first year of registration. The registered marriages of *Roman Catholics* in 230,435 are only about 29,528; so if the Roman Catholic priests in Ireland have returned all the marriages which they solemnized in 1864 this would imply that the number of *Roman Catholics* in the United Kingdom is much below the usual estimate.

Marriage seasons.—Unlike birth and death, marriage is a voluntary act, and if men so will, all the marriages of a country may be celebrated in any single month of the year. But human will is influenced by motives, and these appear to operate all through the seasons of the year with variable force. In London the close of the season among the higher classes is a matrimonial epoch; among the working classes the festivals of Whitsuntide and Christmas, and the season of Lent exert some influence, so do the terms of service, which vary in different counties. The geniality of spring is perceptible; but Lincolnshire is the only county in which the spring weddings exceed the autumn weddings in number. The accumulations of autumn supply a store of food, and the harvest wages of the young swains in agricultural districts are often wisely

invested in the furniture of a cottage: it has already been shown that workpeople are influenced in marriage by economic conditions and prospects.

It might be supposed that marriages take place indifferently on any day of the week. But it is not so. Few marriages are celebrated on a Friday. Now Friday was in former times the day which would be especially devoted to these celebrations, as is implied by the names *Dies Veneris* of the Latins; and Friday, the day of the Saxon goddess Friga.

This day was chosen by the early church, perhaps partly in opposition to Paganism, as a day for carnal mortification; it was the day of the crucifixion of Christ; and hence the festive Friday of the Saxons, and the day especially under the star which astrologers held was most fortunate, fell into the category of "unlucky days." Seamen will not sail, women will not wed, on a Friday so willingly as on other days of the week. The Sun, Moon, and Saturn have gained by this silly superstition, as is shown in the Table below. Half the weddings are celebrated on Sunday and Monday; Saturday has more than its average number, and in the southern as well as the northern counties the Saturday marriages are the most numerous. It has been suggested that the pocket of the workman who has no account at the bank for savings, and lives on weekly wages, is often empty on Friday, which lays his mind open to gloomy omens, and indisposes him, while on Saturday he is exhilarated by the money which he throws into circulation on the three following days. Economy of time is an alleged motive for Sunday weddings.

Re-marriages.—While 147,914 bachelors wedded spinsters, and 7511 bachelors wedded widows, 16,117 widowers wedded spinsters, and 8845 widowers wedded widows. Thus 155,425 bachelors and 24,962 widowers wedded 164,031 spinsters and 16,356 widows. Of 100 men married 86·16

TABLE VIII *c.*—**Number** of **Marriages** on each **Day** of the **Week** in certain **Districts** of **England** in **1864**.

Days of the Week.	Proportional Numbers to 100 Marriages.	Total of Districts.	The Extra-metropolitan part of the County of Surrey and part of Kent Extra-metropolitan. Saturday -	17	694	155	41	34	72	56	185	151

(*a*) Of 459 Marriages on Sunday, and 253 on Monday, in the aggregate, in these four Districts in the June Quarter, 69 were performed on Whit-sunday and 75 on Whit-monday.

(*b*) Including 12 Marriages performed on Good Friday.

(*c*) These Totals include the following number of Marriages not performed according to the Rites of the Established Church; viz., 4 in St. George Hanover-square, 79 in St. George in the East and Whitechapel, 11 in Lambeth, 131 in Birmingham, 146 in Manchester, and 231 in Cumberland, Westmorland, and part of Northumberland.

were bachelors, 13·84 were widowers; the proportions were nearly *six* bachelors to *one* widower. Of 100 women married 90·93 were spinsters, 9·07 were widows; of *eleven, ten* were spinsters, *one* was a widow. The proportion of re-marriages to first marriages is higher than it was 20 years ago. The highest proportion of men re-married is in Wiltshire, of women in Hampshire.

Minors.—11,934 men and 36,235 women married under age; so in 100 of each sex 6·62 men and 20·09 women married before attaining the full age of 21.

Signature of marriage registers.—The bridegroom and the bride invariably sign the marriage register. In the year 1864, of 180,387 *couples* married, it is found that:

The bridegroom *and* the bride wrote their names in 106,569 instances.

The bridegroom *or* the bride made *a mark* instead of *writing* the name in 47,236 instances. [15,416 men and 31,820 women.]

The bridegroom and the bride both *signed with marks* in 26,582 instances.

41,998 bridegrooms and 58,402 brides made their marks instead of writing their names.

What are we to infer from these facts? Not, say some clergymen, that all the women who make marks are unable to write their names, for they are sometimes so "nervous" that they decline to write, and make crosses. This may be true; but against any women deducted from the ranks of ignorance on this ground must be set a large number of women who write their names so badly, as to prove that they have no command over writing for any useful purpose. Indeed it may be safely affirmed that 58,402, or 32 in 100, is an understatement rather than an overstatement of the number and proportion of young women in England incapable of writing for any practical purpose.

Although nothing has been said by the clergy of the timidity of men, it is probable that in this matter, and on this occasion, the women are as brave as the men, to whom similar remarks are therefore applicable.

In the absence of an educational examination of the whole adult population this test may be employed, and may lead to some practical results.

The annexed Tables display the various shades of ignorance in which large masses of the adult population are still plunged.

TABLE VIII *d.*—SCOTLAND, **1862. Proportion** of **Men** and **Women** who **signed** the **Marriage Register** in **Writing.**

Divisions.	COUNTIES.	Of 100 Men Married.	Of 100 Women Married.
	SCOTLAND - - - - - - -	90·0	79·7
III.	Nairn, Elgin, Banff, Aberdeen, Kincardine - - - -	96·5	90·6
VIII.	Roxburgh, Dumfries, Kircudbright, Wigtown - - -	95·3	92·1
VII.	Linlithgow, Edinburgh, Haddington, Berwick, Peebles, Selkirk	94·6	90·3
IV.	Forfar, Perth, Fife, Kinross, Clackmannan - - - -	93·6	85·4
I.	Shetland, Orkney, Caithness, Sutherland - - - -	92·2	81·3
VI.	Renfrew, Ayr, Lanark - - - - - - - - - -	86·5	71·0
V.	Stirling, Dumbarton, Argyll, Bute - - - - - - -	86·4	75·7
II.	Ross and Cromarty, Inverness - - - - - - -	67·5	50·5

Thus in all the counties around Aberdeen 97 in every 100 marrying men and 91 in every 100 women wrote their names. It is only in the highland counties of Inverness, Ross and Cromarty that the men and women approach or surpass the degree of English ignorance. The old tongue is the same hindrance to the education of the people as it is in Wales.

It should be recollected that the marriageable women of a country are a selected class, and include very few of the infirm, deformed, idiotic, or others incapable of learning. They can nearly all learn to write if they have the opportunity. And upon turning to the Report of Dr. Stark, addressed to the Registrar General of Scotland,* I find that all the women of the county of Kinross who married wrote their names in the registers; the proportions per cent. were also 98 in Peebles, 98 in Kincardine, 96 in Roxburgh, 96 in Kircudbright, 94 in Perth, 92 in Fife, 91 in Edinburgh, and 93 in the far off Orkneys. Under these circumstances he must be an extreme optimist who can contend that the state of education of the women of England is the best possible, when it is found that by the same test in 100 of the marrying women of the county of Bedford only 55 write their names, in Cornwall only 60, in Stafford only 52, in Lancashire 53, in the West Riding only 57, in Durham only 62, in Monmouthshire only 48, in North Wales only 51, and in South Wales only 44.

The women of London come as immigrants in large proportions from every county; 83 in 100 of the brides wrote their names. Middlesex, Surrey, Sussex, Hants, Rutland deserve to be mentioned

TABLE VIII *e*.—ENGLAND **1864. Proportion of Men** and **Women** who **signed** the **Marriage Register** in **Writing** in the **several Counties.**

* Eighth Detailed Annual Report of the Registrar General of Scotland—Abstracts of 1862, p. xxiii.

as counties in which 80 or more of 100 brides wrote their names in the registers. In Westmorland 79 women wrote their names; but it is in the education of the men that the Northern Counties approach and even excel, several of the Scotch counties.

Of 100 men marrying, 90 could write their names in Westmorland, 89 in London, 83 in Northumberland, 83 in the East Riding, 81 in the North Riding, 81 in Hants, 81 in Sussex, 80 in Cumberland, 80 in Devon. The proportion then goes on descending deplorably from county to county until it falls to 63 in Bedford, Hertford, and South Wales, 62 in Stafford, and 58 in Monmouth. The excessive ignorance of the colliers of Staffordshire and Wales is a cause of incalculable evils, among others, of explosions, and probably of strikes.

In Scotland we discover a state of things highly creditable to the people of that part of the United Kingdom; and it is difficult to explain the difference in any other way than that in the general struggle for the church property at the Reformation the people had the good sense to endow the schoolmasters with small stipends, and not to give the whole revenue of the land either to the clergy or to the nobility. Between the minister and the lord stood the schoolmaster in the presence of the people. The advantages of the Scotch system of education became so apparent that it was expanded in the period of the civil wars (1646), and firmly established after the Revolution by the celebrated statute of William and Mary in 1696. The endowment was small, and stimulated instead of slackening the exertions of the schoolmaster, who had to depend largely on his own industry, zeal, and popularity for support. M'Culloch estimated the average fixed stipend at 25*l.* 10*s.*, exclusive of

house and garden; the school fees at 22*l.* 10*s.*; the income from all sources at about 63*l.**

It is impossible to say how much Scotland owes to this system of schools, and to the universities, which are accessible to the youth of the kingdom. There was probably as much revenue proportionally devoted to education in England as in Scotland, but the money was in various ways misappropriated, so that before the Reform Bill passed, and even in 1837 when the registration of marriages commenced, the working classes, entirely ousted from the educational charities and universities, were in the most deplorable state of ignorance. *One* in *three* of the young men, and *one* in *two* of the young women, of England could not write their names in the marriage register even in 1841, after some efforts had been made in the cause of popular education.

Happily a considerable improvement is visible in the registers; *one* in *four* of the men, and *one* in *three* of the women, now sign with marks. In twenty-three years the marks-men have fallen from 33 to 23; the marks-women from 49 to 32 in 100.

Still in common education the great body of the people of England are many degrees below the people of Scotland, and it is impossible to calculate the advantage this superiority gives the Scotchman over the Englishman at home and abroad. The education of the common people of Scotland is a benefit to the world; without it Watt could not have invented, Burns could not have written. The brightest boy in a village without a school has no chance of distinction, except by accident.

The success of common education in Scotland speaks well for the working of a rate, mixed with a paying system for children. But before the education of the children of to-day can produce any results on the minds of the marrying fathers and mothers of England, 10 or 15 years may elapse. Cannot nearly all these adults be taught at once to read and write by some simple method? Is there no machinery for grinding reading and writing into the heads of the young agricultural labourers of England who are about to marry within the next five years?

NOTE.—The proportional number of Births registered to Women of *all Classes* (*Wives, Spinsters, and Widows*) of the ages 20-40 and 15-55 is greater in England than in Scotland, but the proportional numbers of Legitimate Births to Wives and of Illegitimate Births to Spinsters and Widows at the above ages are greater in Scotland than they are in England. The age of the mothers at the birth of their children is unknown in England and Scotland. In Sweden the proportions borne by women of the age 20 and under 40 were 87 per cent. of the total number in the years 1826 to 1835.

---

* Statistics of British Empire, vol. ii. p. 373.

Births to a marriage.—The marriages in a calendar year give rise to births which are registered year after year for 20 years. The births to the 167,723 marriages in the year 1859 could only be determined by following the families and counting all the children unto the end. The division of the sum of the children by the marriages would accurately express the fecundity, as it has been called, of marriages. If the annual marriages do not increase or decrease in number through a series of years, the division of the annual births by the annual marriages of the same years expresses the fecundity pretty accurately; but the marriages in England are increasing rapidly; consequently the 740,275 births registered in the year 1864 must be divided by the marriages of some earlier year to get an approximation to the fecundity. As the age of the mothers is unfortunately not recorded, the interval in England is unknown which intervenes between the mean age of marriage and the mean age of the mothers when their children are born; otherwise that interval would indicate the calendar years with which the births of the year 1864 should be compared.

But the interval in Sweden between the mean age of mothers at marriage (25·8 years) and their mean age at the births of their children (31·7) is six years; and the interval in England cannot differ much from six years. Hence, if the legitimate births of given years are divided by the marriages of six years earlier date, the quotient will be the proportion of children to a marriage within close limits. In England the births thus determined to a marriage were 4·255, 4·301, 4·304 in the years 1862, 1863, and 1864. In Scotland the births in 1862 to the average marriages of six years earlier date (1855, 1856, and 1857) were 4·694. The

number of children to a marriage thus appears to be greater in Scotland than in England, and this is held to be a proof that married women are more prolific in Scotland than in England.

Proceeding upon another basis the annual number of legitimate children registered in England was 626,506 in the five years 1856–60; when the average number of wives of the age 15–55, determined directly from the census returns of 1851 and 1861, was 2,843,374; consequently 100 wives bore 22·0 children annually. In like manner it is found that 100 unmarried women bore on an average 1·7 illegitimate children; that is 17 children to 1000 women. 100 women, including the married and the unmarried, bear 12·3 children annually on an average.*

In Scotland, during the same years, the following proportions were found to exist: 100 wives bore 24·8 children annually, 100 spinsters or widows bore 1·9 illegitimate children; and 100 women bore 12·0 children legitimate or illegitimate.

The wives of Scotland, as well as the spinsters, are apparently more prolific than the corresponding classes in England; and yet taken collectively the women of England are more prolific than the women of Scotland. 1000 English women (age 15–55) bear 123 registered children annually; while 1000 Scotch women bear 120 children. The difference is slight, but it is in favour of the English women.

This appears, at first sight, to be contradictory and paradoxical. It is explained by the circumstance that the proportion of recognized wives in the population is much lower in proportion in Scotland than it is in England, and as the fecundity of wives is to that of spinsters as 13 to 1, a slight difference in the proportions alters the birth-rates of the two populations. The difference in this respect between England and Scotland is great: in England 52 in 100 women of the age 15–55 are wives, 48 only are spinsters and widows; in Scotland the proportions are reversedly 44 recognized wives to 56 spinsters and widows.

1856–60.—(1) **Wives,** (2) **Spinsters** and **Widows,** of the **Age 15–55** in **England** and **Scotland.**

—	Number of Married and of Unmarried Women.		Proportional Number of Married and Unmarried Women.	
	England.	Scotland.	England.	Scotland.
Women	5,437,769	867,062	100·00	100·00
Wives	2,843,374	383,271	52·29	44·20
Spinsters and Widows .	2,594,395	483,791	47·71	55·80

By altering the proportions in Scotland, for instance, by transferring 57,608 women from the ranks of the unmarried to the married women, and by transferring 2,130 children from the ranks of the illegitimate to the legitimate children, the fecundity of women—of the wives and of the spinsters—of Scotland, becomes the same as the fecundity of the corresponding classes in England, namely, wives having children 22·034 per cent., spinsters and widows 1·676; instead of 24·790 and 1·916 per cent.; and when the transfer is made, the proportions remaining still show a less excess of women living in the state of marriage in Scotland than in England. Let us push this inquiry a little further.

* The proportions are slightly different in the years 1862 and 1864; but the argument remains unaffected. The same remark applies to the proportions of births to women of age 20–40. *See* Table VIII *g*.

"There is an important distinction between the law of Scotland and that of England upon the point of legitimation by marriage, the former *legitimating all the children of the parties born before* the marriage, the latter legitimating only those who were born after the marriage. * * *

"It has been an established rule and principle of the law of Scotland for some centuries that *when a man and a woman are once lawfully married all the children born of such parents, whether born before the public celebration or open declaration of such marriage, or after it, are equally to be esteemed their legitimate children.* * * *

"It is generally stated in Scotch authorities to rest on a presumption or fiction, by which it is held *that there was from the beginning of the intercourse of the parties, or at the time when the child was begotten, a consent to matrimonial union interposed, notwithstanding that the contract was not formally completed or avowed to the world* [at the census, for example] *until a later period.*"*

The legitimation of children born out of wedlock by subsequent marriage is somewhat different in France; it depends on the decision of the parents under the Code Napoleon, which nearly expresses the state of the law on the continent of Europe since the time of the Romans.

"Les enfans nés hors mariage autres que ceux nés d'un commerce incestueux ou adultérin *pourront être légitimés par le mariage subséquent de leurs père et mère, lorsque ceux-ci les auront légalement reconnus avant leur mariage ou qu'ils les reconnaitront dans l'acte même de celebration.*"—Code Civile, livre i. section 331.

England stands almost alone among the civilized nations of Europe in refusing legitimation, even at the wish of the parents, to offspring born out of wedlock: and changes of the law might be demanded not only in kindness but in justice to the children, if there were no great countervailing advantages on the side of English law. Such advantages are believed to exist.

* Shelford, Law of Marriage, pp. 783–4. In a note he adds: "Legitimation *per subsequens matrimonium* is admitted, with different modifications, not only by the law of *Scotland*, but in *France*, *Spain*, *Portugal*, *Germany*, and *most other countries in Europe*. It prevails in the *Isle of Man* (*Lex Scripta of the Isle of Man*, *p.* 70–75), *Guernsey* and *Jersey*, *Lower Canada*, *Saint Lucia*, *Trinidad*, *Demerara*, *Berbice*, the *Cape of Good Hope*, *Ceylon*, and the *Mauritius*. It is not admitted by the law of England, or of her other possessions in the West Indies and North America, or by the law of Ireland. It prevails in the States of *Vermont*, *Maryland*, *Virginia*, *Georgia*, *Alabama*, *Mississipi*, *Louisiana*, *Kentucky*, *Missouri*, *Indiana*, and *Ohio*, but *not* in the *other States* of America. —1 Burge on Foreign Law, 101."

Out of 1000 children whose births are registered in England 65 are illegitimate; out of 1000 registered in Scotland 89 are illegitimate (1856–60); the proportion of bastards in an equal number of children of the two countries is as 3 in England to 4 in Scotland. Is this to be ascribed to the greater ignorance of Scotch women? By no means. Is it due to differences of religious belief or zeal? No one pretends that in this respect the people of Scotland are at all inferior to the people of England. We are thus driven back for an explanation to differences of the laws.

It is quite certain that many of the children registered as illegitimate in Scotland will be legitimated by the subsequent marriage of their mothers; the number is not always recorded as the mere fact of marriage regular or irregular legitimates offspring; but assume the numbers to be 2130 out of 9272 illegitimate births, then it follows that an indefinite number of the women returned at the census as spinsters in Scotland are living in a state of quasi-marriage described in the books, and fairly expecting if they have children to see those children legitimated by subsequent marriage; they are kept in an uncertain state, hovering between concubinage and marriage, to which there is nothing corresponding in England, and they would nearly all, if they lived under the English law, be explicitly married. If the numbers of these women are taken at 57,608, as has been before explained, and added to the wives of Scotland (age 15–55), the numbers of wives *de præsenti* and wives *de futuro* will be 440,879, giving birth to 97,143 children annually, leaving 426,183 spinsters and widows corresponding to the same class in England, and giving birth to the same proportion of illegitimate children.*

As a class these women in the prenuptial stage have comparatively few children, for the fruitful marry, and the unfruitful as a rule remain unmarried.

Other explanations are conceivable, but under this hypothesis it is not necessary to assume that there is any essential difference in the organization, the fecundity, or the virtue of the women living north and south of the Tweed. The laws are different. The result seems to tell in favour of the English marriage law, and against legitimation by subsequent marriage, inasmuch as the benefit to existing illegitimate children is pur-

---

* Let the fecundity of wives age 15—55 in England be thus expressed by—

$$\frac{\text{legitimate children in a year}}{\text{wives living in a year}} = f;$$

and that of unmarried women by $\dfrac{\text{illegitimate children}}{\text{spinsters and widows}} = \phi$.

And for Scotland put l = legitimate births in corresponding year, borne by w wives of age 15—55; also i = illegitimate births by s spinsters and widows of same age.

Then to obtain the proportion (y) of spinsters to be transferred to wives, and of illegitimate births (x) to be transferred to the legitimate, in order to make the fecundity of the corresponding classes equal to those of England, we have these Equations of Condition:

$$(1) \qquad \frac{l + xi}{w + ys} = f = \cdot 22034$$

$$(2) \text{ and } \frac{i - xi}{s - ys} = \phi = \cdot 01676$$

$$\therefore \quad x = \frac{\phi f\,(s + w) - (\phi l + fi)}{i\,(\phi - f)}$$

$$= \frac{fw + \phi s - (l + i)}{s\,(\phi - f)}$$

chased by multiplication of their numbers, uncertain connexions between the sexes, and extensive disorganization of family life.

Births.

The births of living children in the year 1864 were more numerous than in any previous year; the number registered was 740,275, being 12,858 in excess of the number registered in 1863. The birth-rate was 3·564 per cent. per annum, the highest experienced since the commencement of registration; the rate has steadily increased during the last five years; it was 3·437 in 1860, and 3·461, 3·504, 3·539, and 3·564 in the four following years, the average of the 27 complete years of registration, 1838–64, being 3·342. In 1864 there was one child born alive to every 28 persons living.

As may be expected, the rate of birth varies in different localities; it is lower among the purely agricultural than among the manufacturing and mining populations; in Surrey (*extra-metropolitan*) the rate was 3·112 per cent., in Sussex 3·197, Middlesex (*extra-metropolitan*) 3·130; in Devonshire it was 3·171, while in the neighbouring mining county of Cornwall it was 3·548. Somersetshire had the low rate of 3·112, and Herefordshire, lowest of all, showed only 3·084 per cent. Among the counties experiencing a high birth-rate, Durham ranks first, with 4·298 per cent.; then follow Staffordshire 4·093, West Riding of York 3·966, Lancashire 3·768, Leicestershire 3·762, Northumberland 3·734, and Monmouthshire 3·728. In London the birth-rate (3·480) was as usual lower than that of England generally (3·564), which is probably, to some extent, owing to the large proportion of unmarried persons engaged in

but the proportion to the total births is slightly lower, being 6·4 to every 100 births, against 6·5 in 1863. The following counties show the highest proportion of illegitimate births : Norfolk 10·5, Shropshire 9·2, Nottinghamshire 9·2, North Riding of York 9·4, Westmorland 10·5, and Cumberland the maximum rate of 11·8 per cent.

Deaths.

In 1864 the deaths registered in England were 495,531 ; and they were more than 20,000 above the number registered in 1863. Twenty years ago the annual number was about 350,000 ; it is now little short of 500,000. This efflux of human life by the inevitable law of death is a phenomenon as great and impressive in itself as the perpetual growth of the national strength, and the energy with which the people develope their resources, and repair the waste of time and circumstance.

The excess of births over deaths, or the natural increase of population, was 244,744.

The rate of mortality was 2·386 to a hundred persons living, whilst the average for the ten years 1854–63 was 2·213 per cent. It was so high that it slightly exceeded the high rate (2·352) which prevailed when cholera was epidemic in 1854. Under the previous epidemic of 1849 the mortality rose to 2·512 per cent. ; and influenza in 1847 raised it to 2·471 ; but with these exceptions the death-rate of 1864 was higher than any other experienced in the series of years, nearly three decades, to which the national records relate. It was high both in town and country, and through the changing seasons of the year. In three fourths of the whole period the weather was cold, The fall of rain in the year, as observed at Greenwich, was scanty to a remarkable degree, and the motion of the air was less than usual.

Table XIV.—**Annual Rate of Mortality** of Males and of Females in **England, 1838–64.**

Years.	Deaths. Of Males to 100 Males living.	Deaths. Of Females to 100 Females living.	Deaths of Males to 100 Deaths of Females.	Of equal Numbers living, the Number of Male Deaths to every 100 Deaths of Females.

Average of 27 years, 1838–64 - -	2·321	2·149	103	108

The Table may be read thus :—In the year 1838 to every 100 males living there were 2·342 deaths of males ; to every 100 females living there were 2·146 deaths of females ; and to every 100 females who died there were 105 deaths of males. The last column shows the *relative* mortality of *males* and *females ;* and that out of equal *numbers living* the deaths of males were 109 to every 100 deaths of females in 1838.

In the urban districts the mortality was 2·598 against an average of 2·425; in the rural districts it was 2·107 against an average of 1·973. The air was moderately warm in the second quarter; and the country districts experienced the effect of it in that quarter in a mortality but slightly in excess of the average.

In the winter quarter of 1864 the annual rate of mortality in 142 town districts was 30 deaths in a thousand living.

43	South Wales - - -	2·219	2·230	2·004	2·004	2·412	2·289	2·116	2·052	1·997	2·050	2·137	2·310
44	North Wales - - -	1·962	2·145	1·894	1·938	2·026	2·047	2·225	2·098	2·189	2·171	2·070	2·214

In 1850 there were 48 persons living to *one* death; in 1856 there were 49; in 1860 and in 1862 there were 47. These are examples of the healthiest years. In 1849 and 1854, epidemic years, the numbers living to one death were only 40 and 43 respectively. Three years of health, 1860, 1861, and 1862, were succeeded by two years, 1863–64, in which the numbers living to one death were only 43 and 42. In 1864 scarlatina, small-pox, and typhus were fatal over the kingdom; and cold, with sudden vicissitudes of temperature, produced bronchitis and pulmonary affections, or gave increased vigour to zymotic and other diseases.

Sex.—The deaths of males in the year were 253,619; and those of females 241,912. In males the rate of mortality was 2·514 per cent.; in females it was 2·264. The average rates are respectively 2·321 and 2·149; hence it appears that the effects of the insalubrity special to the year cumulated more in that which is popularly known as the *stronger* sex than they did in the *weaker*. Greater exposure to the weather, heavier toils under unfavourable circumstances, and more constant communication with the innumerable sources of infection, will account partly for the difference in the results.

For a hundred deaths of females there were 105 deaths of males. But in the actual constitution of the population the female element predominates over the male; and if for better comparison equal populations were taken, say a million males and a million females, there would be, under the ascertained rates of mortality, 111 deaths of males to 100 deaths of females, while taking an average derived from a succession of years the proportion would be 108 to 100.

Place.—The death-rate for England, as has been stated, was 2·386 per cent.; but while this is shown by the Tables to be the rate for the whole kingdom, it may not be precisely that which ruled in any assignable

* For mode of reading this Table, see Note to Table XVII.

NOTE.—The Population used in the above calculations is now deduced from the ascertained rate of increase observed in the 20 Years 1841–61.

part of it. Density of population, purity and impurity of earth, water, and air, wealth and poverty, the geological structure of a district,—these and other elements of health and sickness, in their manifold combinations, depressed the mortality in one place, raised it in another. The following rates in different *counties* may be selected, though these, as must be obvious, are derived from populations living each in circumstances almost as diversified as those of the country in its whole extent, and therefore do not furnish the extreme examples that distinguish the busy town from the hamlet. But the differences are nevertheless very considerable in some instances: Westmorland supplied, amongst all the English counties, the best example of healthy condition, the rate of mortality in it having been 1·820; for in the Table, it should be mentioned, the Welsh counties are not distinguished, but are formed in two groups, North and South Wales. The next lowest rate was 1·902 which prevailed in Surrey (exclusive of the Metropolitan portion of it). In that south-eastern corner of England, which lies south of the Thames, the rural division of Surrey holds the best position in sanitary statistics; but Sussex, Hampshire, Berkshire, and the rural part of Kent enjoy fair repute; the rate of mortality rising in none of these counties so high as 2·1. Rutlandshire, Lincolnshire, Suffolk, Dorset-

The Table may be read thus:—Of 100 males living of the age 35 and under 45, 1·358 died in 1838, 1·265 in 1839, and 1·162 in 1850; the average annual rate in the 27 years, 1838-64, among the aggregate of males in this decennial period of age was 1·282.

shire, the North Riding of Yorkshire, these stand as well as the South-eastern Counties.

Much fatal illness had prevailed in Lancashire in 1864, where the death-rate was 2·718 per cent. (the average being 2·580); and it did not in any other county rise as high as 2·700. Monmouthshire and the West Riding of Yorkshire were subject to an equal death-rate, namely, 2·656. In Staffordshire it was 2·518. The average rate of Staffordshire is higher than that of Monmouthshire, which county, as well as Bedfordshire, suffered to a degree much above that which is usually experienced. In the latter county the rate for the year was 2·454.

Of the three counties, Durham, Northumberland, and Cumberland, the last is generally the most healthy; the two former having large populations engaged in mining and other industry. But in 1864 the rate of mortality in Cumberland, with its comparatively small towns, was 2·339 against 2·273 in Northumberland.

Death-rate of males at different ages.—It has been stated that the mortality of males at all ages was 2·514 per cent. in 1864. At some particular ages it was much above that point; at others much below it. The rates at the different ages may be compared with corresponding rates in the quinquennium 1856-60, which was undisturbed by great prevailing epidemics. The mortality of boys who had not reached the close of their fifth year was 7·535 per cent.; the average in 1856-60 was decidedly lower; it was 7·189, At the age 5—10 years it was ·993 against an average of ·833. It was also higher at the age 10—15 years; the results being ·503, average ·464. Again at 15—25 years the rates were ·780 and ·737; at 25—35 years they were 1·075 and ·915; at 35—45 years they were 1·493 and 1·236; at 45—55 years 1·901 and 1·708; at 55—65 years 3·385 and 2·997; at 65—75 years 7·756 and 6·621; at 75—85 years 15·413 and 14·271; at 85—95 years 34·340 and 30·120; and at 95 years and upwards the rate which had been increasing since the age of 15 years, and in the last three decenniads with redoubled

speed, rose to 53·246 against the average 42·456. It is thus seen that the mortality of 1864 was high to boys and men at every period of life.

Death-rate of females at different ages.—In like manner if a comparison be made of the deaths of females at the several periods of life in 1864, with those of 1856–60, corresponding results will be observed. The death-rate in 1864 for all ages, 2·264 per cent., was higher than the average 2·100; and in every instance it was also higher as regards particular ages. Taking the extremes of life, the death-rate of girls under 5 years of age was 6·537, the average being 6·257; and that of aged women at 95 years and upwards was 44·851, the average being 41·626. A similar excess, but greater or less in amount, obtained at each intermediate stage.

The death-rates of males exceeded those of females at all the above specified ages, except 10—15 years and 15—25 years, in which periods the latter slightly predominated.

Seasons and meteorology.—The 495,531 deaths in the whole year occurred in the quarters as follows: In the three months ending 31st March, 142,977; in the three months ending 30th June, 116,880; in those ending 30th September, 112,223; and in the last quarter 123,451. The relative influence of the seasons is more readily appreciated, by stating that out of 4000 deaths (giving an average of 1000 for a quarter)

1159 occurred in winter, 949 in spring, 901 in summer, and 991 in autumn. Hence it appears that the cold season asserted its fatal prerogative; and on reference to other years, that it asserted its influence with more than its usual decision. But in all the quarters the mortality was above the average calculated for the several quarters; in the first or winter quarter it was 2·772 per cent., the average being 2·497; in the second quarter (spring) 2·260, average 2·222; in the third quarter (summer) 2·141, average 2·044; and in the last or autumn 2·349, average 2·178.

At Greenwich the mean temperature of the air was *in each* of the first three months below the average; in the two next it was above it; in the sixth below it; in the seventh scarcely above it; and in the remaining five months either below or not above it. In only three months out of the twelve was the mean temperature above the average; and in only one of these three could it be said to have been decidedly above it. Weather of such ungenial mood could not be but destructive of human life; and if it bore the like character all over England, the mortality, which rose till it exceeded by considerably more than a thousand deaths a week the average mortality of the years 1860, 1861, and 1862, may be referred, as regards that excess, to an agent which is as powerful in its nature as it is pervading in its operation. By a reference to the Tables of diseases it will be seen that miasmatic diseases were uncommonly prevalent, and co-operated powerfully with unusual meteorological conditions in raising the mortality.

Besides the requisite degree of warmth, another great sanitary influence was withheld, or was not present in its usual amount. The rain-fall in the year was only 16·8 in. at Greenwich. In the previous fifteen years there was no example of a year of such drought. The annual average in that period was 23 inches. The rain supply was deficient generally through the year, but especially in summer. The humidity of the air was 78 (complete saturation = 100) or 5 below the average. The air was comparatively still; for the mean weekly motion of the air was 1597 miles, which is 97 less than the average.

Great Britain.

The population of Great Britain calculated for the middle of the year 1864 was 23,891,009, of which 3,118,701 belonged to Scotland. But although the Scottish population was equal to almost a sixth part of that of England, the marriages in the year were only 22,675, or about an eighth part of the number that took place in the sister kingdom. If the marriage-rate had been as high as that which prevailed south of the Tweed, the number of marriages would have been 27,083. But it was lower; and the persons married were fewer by nearly 9000 than would have been united in wedlock if the constitution of the Scottish population in respect to sex and age, their social condition, habits, and disposition to form families, had been similar to those of the English people.

The North-western Counties, Cheshire and Lancashire, contain a population less by nearly 30,000 than that of Scotland, but in that division

The Table may be read thus, without reference to the decimal points:—In the March quarter of the year 1838, to 100,000 of the population of England there were 3,032 births, and 2,615 deaths registered. The three months January, February, March, contain 90, in Leap year 91 days; the three months April, May, June, 91 days; each of the two last quarters of the year 92 days. For this inequality a correction has been made in the calculation.

Table XXII.—Estimated **Population, Marriages, Births,** and **Deaths** in **Great Britain,** in the Year **1864.**

——	Area in Statute Acres.	Estimated Population in the middle of the Year 1864.	Marriages.	Persons Married.	Births.	Deaths.
England and Wales -	37,324,883	20,772,308	180,387	360,774	740,275	495,531
Scotland - - -	19,639,377	3,118,701	22,675	45,350	112,445	74,303
Great Britain -	56,964,260	23,891,009	203,062	406,124	852,720	569,834

the marriages in 1864 were 28,235 (against 22,675 in Scotland). And in London, the population of which is not only less than the Scotch, but less by at least 100,000 than that of the two North-western Counties, the marriages were far more numerous than they were either in the northern kingdom or in the great manufacturing district, having been 31,541.

In England the number of persons married to a hundred living was 1·736; in Scotland 1·454; in Great Britain 1·700.

But though Scotch marriages were few, Scotch births were numerous. The latter were 112,445. The total births registered in Great Britain were 852,720. The birth-rate in Scotland was 3·606 per cent. of the population (as against 3·564 in England).

The deaths in Scotland were 74,303; in Great Britain 569,834. The rate of mortality in Scotland was 2·382 per cent., almost exactly the same as in England (2·386).

France, Austria, Italy, Spain.

In France the marriages in 1864 were 294,247; the births 993,188; the deaths 823,185. Persons married (per cent. of the population) were 1·552 against 1·736 in England; the birth-rate was 2·621, the English rate having been 3·564; the death-rate was 2·172, that of England having been 2·386. While in France the public health was much better than

Table XXIII.—**Proportion** per Cent. of **Marriages, Births,** and **Deaths** to the Population of **Great Britain,** in the Year **1864.**

———	Acres to a Person.	To 100 Persons living.			
		Marriages.	Persons Married.	Births.	Deaths.
England and Wales - -	1·80	·868	1·736	3·564	2·386
Scotland - - - - -	6·30	·727	1·454	3·606	2·382
Great Britain - -	2·38	·850	1·700	3·569	2·385

Note.—The total area of a country, divided by its population, gives the average area to each person. The reciprocal gives the "density" of the population, or the population to each acre, square mile, or other measure.

* The returns for France in the years 1861, 1862, 1863, and 1864 include the three newly annexed departments. The deaths of Frenchmen abroad—civil or military—are registered in the books of the commune in which was their last domicile. M. Legoyt has revised the population and the numbers of marriages, births, and deaths for the years 1853–62.

† The returns for Austria exclude Hungary, Croatia, Slavonia, and Transylvania: but the proportions per cent. are estimated to represent the rates prevailing in the entire empire.

In Austria the marriage-rate (1·672 persons married to 100 living) was less than in England (1·736). In the former country both the birth-rate 4·043 per cent., and the death-rate 3·016 per cent. were higher than the respective rates, 3·564 and 2·386 in England. Likewise in Italy the marriage, birth, and death-rates were 1·592, 3·793, and 2·952; being in respect to the first fact less, and in respect to the last two, greater than in England. The Italian rates were all lower than the Austrian.

The Austrian marriage-rate is generally higher than the English marriage-rate; but in 1859 it fell to 1·476 per cent. The Austrian birth and death rates are invariably higher than those in England.

TABLE XXVI.—**Italy. Population, Numbers,** and **Proportions per Cent.** of **Marriages, Births,** and **Deaths, exclusive of still-born,** in each of the Years **1862** to **1864.**

Dr. Maestri, Chief of the Statistical Department of Italy, has favoured the Registrar-General with the facts in the above Table.

NOTE.—The Returns of Births and Deaths in the year 1862 included the *still-born*, and as no *separate* return of them was made in that year the numbers returned as still-born in 1863 have been deducted from the Births and Deaths for the year 1862.

TABLE XXVII.—**Annual Rate of Mortality** per Cent. in **Great Britain, England, France, Austria,** and in **Italy,** *including* the **Deaths of Soldiers at Home and Abroad, 1857** to **1864.**

1859	2·111	3·396
1860	1·639	2·603
1861	1·574	2·567
1862	1·346	1·981
1863	1·586	1·682
1864	1·735	1·893

The British Army.

I have been favoured by His Royal Highness the General Commanding-in-Chief with a return of the strength of the Army serving abroad in 1864, and the deaths in it in the same year. The average numbers abroad of cavalry, infantry, artillery, and engineers were of officers 6167, of non-commissioned officers and men 126,040. They were nearly the same as those of the previous year, but an increase on those of 1861–62. The deaths in that strength were, of officers 107, of non-commissioned officers and men 2386. The mortality of the officers was 1·735 per cent.; of the rest of the army 1·893. The former rate was higher than it had been previously since 1859; but the health of the men seems to have

Table XXXII.—**Army serving at Home and Abroad.**

	1861
Officers and Men born in England - - -	130,469
" " Scotland - - -	20,901
" " Ireland - - -	71,556
" " Foreign Parts -	6,635
Total - - - - - -	229,561

Table XXXIII.—**Deaths** of **Officers and Men** in the **Army Abroad,** and Estimated Numbers belonging to **Great Britain** and to **England and Wales,** in each of the Five Years **1858–1864.**

Years.	Deaths of Officers and Men in the Army Abroad.	Estimated Numbers in Col. 2. belonging to	
		Great Britain.	England and Wales.
1	2	3	4
1858	7,363	4,275	3,486
1859	4,150	2,409	1,965
1860	3,293	1,912	1,559
1861	3,097	2,042	1,760
1862	2,544	1,677	1,445
1863	2,209	1,457	1,255
1864	2,493	1,644	1,417

The number of Deaths in the cols. 3 and 4 were estimated on the assumption that the soldiers abroad belonged to the different parts of the British Empire in the proportions indicated in the Table XXXII.

Table XXXIV.—**Austria. Annual Rate** of **Mortality** per Cent. in the **Army** in each of the Years **1857–64.**

Years.	Estimated Strength.	Deaths.	Annual Rate of Mortality per Cent.
1857	379,374	8,646	2·279
1858	347,696	8,577	2·467
1859	527,772	16,638	3·152
1860	384,302	11,903	3·097
1861	459,300	8,763	1·908
1862	400,895	6,800	1·696
1863	467,154	5,811	1·244
1864	559,599	6,928	1·238

been good, for though the death-rate among them was higher than it had been in 1863, it was lower than in 1862.

In 1861 the entire strength of the army at home and abroad was 229,561 officers and men, of whom 130,469 were natives of England. The Austrian army in that year was 459,300 ; in 1864 it was 559,599.

Births and Deaths of British Subjects at Sea.

The number of births at sea reported by captains of ships was 380 in 1864; that of deaths was 589. This return does not include the deaths of soldiers, marines, or seamen of the Royal Navy and Merchant service.

The mortality of merchant seamen at sea was 1·99 to 100 living in 1864. The average rate in the 13 years 1852–64 was 1·93.

The deaths of passengers, seamen, and others on board ships, who died from natural causes, or were drowned or otherwise killed at sea in 1864, and which deaths have been reported to me and entered in the Marine Register, are 386. The record, which is exclusive of the returns made to the Registrars General of Scotland and Ireland, is manifestly imperfect. The bodies of persons who have suffered shipwreck and have been washed ashore in England are registered in the districts where they are found.

Table XXXV.—**Number** of **Births** and **Deaths** of **British* Subjects at Sea,** exclusive of Soldiers, Marines, invalided Seamen from the Royal Navy, and Seamen on Ships' Articles, in the Years **1856–1864**, reported by the Captains or Commanding Officers of Vessels to the Registrar General of Seamen upon Schedule C., deposited at the Termination of their respective Voyages in Ports of the United Kingdom.—(Furnished to the Registrar General by the Registrar General of Seamen.)

		Males.	Females.	Total.
Births at Sea	1856 (imperfect)	71	66	137
	1857	168	142	310
	1858	132	117	249
	1859	135	132	267
	1860	136	114	250
	1861	110	108	218
	1862	146	148	294
	1863	159	185	344
	1864	203	177	380
	Total	1,260	1,189	2,449
†Deaths at Sea	1856 (imperfect)	121	78	199
	1857	238	140	378
	1858	253	182	435
	1859	524	303	827
	1860	241	156	397

	1863	347	231	578
	1864	379	210	589
	Total	2,537	1,569	4,106

* British subjects are not particularly described upon Schedule C., but foreign names have been excluded from this account.

† The deaths of soldiers, marines, and seamen from the Royal Navy, who were passengers in British Merchant Ships, were 33 in 1856, 59 in 1857, 156 in 1858, 196 in 1859, 196 in 1860, 69 in 1861, 122 in 1862, 116 in 1863, and 96 in 1864. The number is 1043 in nine years, which, if added to the 4106 above, makes 5149, the total number of deaths of British subjects at sea in 1856–64, exclusive of those of merchant seamen.

Names on the Registers and Searches.

The names of all children registered as born, of all persons registered as having died, and of all persons married have increased in the accumu-

Table XXXVI.—**Mortality** of **Merchant Seamen at Sea,** in the 13 Years **1852–64.***

Years.	Strength.	Deaths.	Annual Rate of Mortality. To 100 living.
1852	159,563	2,205	1·38

In the 13 years 1852–64	2,261,579	43,713	1·93

* Deduced from a return of the number of accounts of wages and effects of seamen (exclusive of masters) dying before the termination of the voyage, received by the Registrar General of Seamen. This return does *not include seamen dying ashore in foreign parts*, whose wages and effects are delivered to the consuls or officers of the hospitals to which such men are sent; accounts of their effects are sent direct to the Board of Trade.

If a seaman dies on the passage from Sunderland to Calcutta, his death is reported at Calcutta, and his wages and effects are accounted for and transmitted home, if the vessel is not to return direct to the United Kingdom. But if a *passenger* dies on board a ship which does not return to a British port immediately, but trades for a time in foreign parts, considerable delay may occur before his death is reported. In all cases, however, the date is given, and in the accompanying tables the births and deaths are classed according to the years in which they occurred.

A column headed *Place of Birth* was formerly contained in the schedule, for the purpose of distinguishing passengers as British subjects or Foreigners, but in many cases it was not filled up by masters, in consequence of their inability to obtain the information after the death had taken place. A column headed "Whether "supposed to be a British subject or Foreigner" might be attempted. British and Foreign *seamen* are distinguished.

When a ship is lost with all persons on board, the owners return the number and names of the crew, and the names of the passengers, when known, to the Registrar-General of Seamen.

Table XXXVII.—**Aggregate Number of Names on the Registers** at the End of each Year **1837–64**; also the **Number of Searches for Registers** at the **Central Office** (exclusive of Searches in Non-parochial Registers).

1864 – –	8,122,476	16,459,948	11,011,291	35,593,715	8,346

Note.—The numbers registered in 1837 are for the Half Year ending December 31st.

lation of 27½ years, from July 1st, 1837, to December 31st, 1864, to 35,593,715. To state the numbers roundly they are about 35,000,000, of which 8,000,000 are names of the married, 16,000,000 those of children born, 11,000,000 those of the dead. The names of persons who have been married twice or oftener in that period, and those of persons whose existence has both begun and ended within the limits of the national registration, are counted more than once. The numbers represent events, not persons.

The searches for registers at the Central Office are yearly increasing; 8346 were made in 1864.

Dr. Farr has addressed to me his usual Report on the Causes of Death in England, which will be found in the Appendix.

I have the honour to be,
Sir,
Your faithful servant,
GEORGE GRAHAM,
Registrar-General.

Summary of the Quarterly Reports, 1864.

First Quarter.—January, February, March.

The return exhibits important, and even striking, results in its threefold variety of subject. The return of marriages is a very satisfactory proof that the bulk of the population was in prosperous circumstances. In the first quarter of the year the marriage-rate is always lower than in any of the three subsequent quarters; but within the range of comparison which the Tables supply, viz., the results of the last ten years, there is no instance of a winter quarter furnishing as high a marriage-rate as that of the March quarter in the present year. The registration of births may be described as "extraordinary," for not only were the births more numerous than they had been at any previous period, but relatively to population they were also numerous beyond example within the last ten years. And in respect to the deaths, a remarkably high rate of mortality attests the severity with which the inclemency of the winter pressed on the public health.

Marriages.—The marriages in the March quarter numbered 37,988. The acceleration of the marriage-rate attained in that period appears by comparing corresponding quarters in 1861–64, in which, using round numbers and a thousand as the unit, the figures run thus: 33, 34, 36, and 38. There was a decided decrease in Devonshire and Cornwall.

The marriage-rate assumed great activity in Yorkshire. In Bradford marriages rose to 499, from 431 and 460 in two previous winter quarters; in Leeds to 496, from 347 and 374; in Sheffield to 506, from 385 and 399.

In Newcastle-on-Tyne they were in the three quarters successively 387, 406, and 443; in Merthyr Tydfil 173, 189, and 260; in Swansea 96, 107, and 127.

The marriage-rate in England and Wales (persons married to population) was 1·472 per cent. against an average of 1·379.

Births.—The total number of births was 192,947 in the first quarter of the present year, of which 26,597 were in London. There was an increase on the number registered in the same period of 1863 in all the Eleven Divisions, except London and the South Western Counties. The number rose in the North Western Counties (Cheshire and Lancashire) from 28,722, to 29,989.

The annual birth-rate in the quarter was 3·74 per cent. against an average of 3·60. It was singularly high; for of results obtained in the previous ten years the highest was 3·72 in the June quarter of 1854. The birth-rate rarely attains so high a point as 3·70 in any quarter, and the average for a year is 3·45.

Increase of Population.—As the births were 192,947, and the deaths were 142,977 in the same time, there was an excess in the former amounting to 49,970, and representing the natural increase of population in the quarter. The Emigration from the *United Kingdom* comprised about 10,923 English people, 2175 Scotch, 24,779 Irish, and 3160 Foreigners, altogether 41,037 persons.

Of the Irish, all, except a section which did not count 3000, went to the United States. Of the English about 6614 persons sought the United States, 3451 the Australian Colonies. The Scotch divided themselves almost equally between those two destinations.

In the March quarter of 1862 the emigrants to the United States were 7210; in that of 1863 they were 24,900; in the same quarter of the present year 32,275. Australia attracted 11,930 persons in the March quarter of 1863, and only 7168 last quarter.

Prices, the Weather, and Pauperism.—Meat more than maintained its price, but both wheat and potatoes were unusually cheap. The mean of the lowest and highest prices of beef as sold at Leadenhall and Newgate was $5\frac{1}{2}d.$ against $5\frac{1}{8}d.$ in the same quarter of the two previous years; and of mutton the mean price was $6\frac{1}{4}d.$, which is also higher than in either of the two corresponding periods. Wheat declined to 40*s.* 4*d.* per quarter, each period of three months since September 1862 having witnessed more or less fall in the price. From the date just specified the fall has caused a difference of 16*s.* 6*d.* per quarter. Best potatoes have fallen to a mean price of 62*s.* 6*d.* per ton at Southwark against double that price in the first three months of last year.

The amount of pauperism and its fluctuation in three successive winters are shown in the following statement. The great severity of the late season has doubtless modified, but happily has not prevented an improvement in the condition of the working classes.

	Persons in receipt of In-door Relief.	Out-door Relief.
March Quarter 1862	143,772	804,268
" " 1863	142,257	943,324
" " 1864	139,606	855,776

It appears in the last Report of the Central Executive Committee for relief of the distressed districts that the number of persons employed in the mills full time has increased from 210,739 in last January to 232,307 in March. The report adds, that a large number returned as "out of work" are in fact "earning considerable though irregular wages on out-door labour." There are some places in which the Relief Committees have suspended their operations without risk to the health of the population; and out of 172 districts reported on, there are only 101 in which voluntary funds are now distributed. Still there are many unions in which the distress of the unemployed has been but "very slightly mitigated."

The mean temperature of the air in the quarter at Greenwich was as low as 37°·9. In the winter quarter of 1862 it was 41°·1; in that of 1863 it was 42°·6. Mr. Glaisher writes that 1863 closed with very fine weather of some weeks' duration all over the country. At the commencement of 1864 the weather completely changed, and was exceedingly cold till the ninth day, the daily defect of temperature being on an average $8\frac{1}{2}$°. On the 6th and 7th January the defect was 15° and 13° respectively, and at night the temperature on grass fell to 6° and 7°. The frost was followed by warm, damp, foggy weather. A cold period again set in on 4th February, which lasted a week; snow fell in many parts, and on some days the defect of temperature was 10°. Another warm period succeeded, which continued five days, after which the weather assumed quite a wintry character, with frost, snow, and sleet in all parts of the country. From March 4th to 15th the weather was generally warm, and from that date to the end of the month it was cold. The season was a time of unusual change from frost to thaw, and thaw to frost. The amount of rain in the quarter was 4·4 in. which is slightly below the average.

Deaths; and State of the Public Health.—The deaths greatly exceed the average number. Seldom has a winter been more fatal; for 142,977 deaths, 1571 a day, were registered in ninety-one days, including the additional day of Leap year, for which due correction is made. The mortality was at the rate of 2·772 per cent.; whereas the average of the season in the preceding ten years was 2·490 per cent.; thus the rate was nearly 28 instead of 25 in 1000.

14,698 persons died in excess of the average number.

Since 1842 it is only in the two winters (1847–48) after the potato failure, and in the winter of the Crimean war (1855), that the country

has experienced any higher rates of mortality. The winter death-rate per 1000 was 2·850 and 2·794 in the former years, 2·910 in 1855, and 2·772 in 1864.

In unhealthy places, and in England formerly, when the land was undrained, and when zymotic matter soiled the air and waters more abundantly than it does in these days, the mortality was highest in the hot months of the year; but in the last quarter of a century the summer diseases have to some extent subsided, and left the mortality highest in winter, when the cold weather, in some proportion to its intensity, cuts off the weakly and the aged.

Upon dividing the population into two portions, the one living in the districts comprising the chief towns is found to have experienced the highest rate of mortality, or 2·974 per cent., while the mortality was at the rate of 2·508 in the small towns and in the country districts. The town rate was ·296, the country rate ·228, above their respective averages; thus the increase of the rate was greater in the town than in the country districts.

London suffered to an extraordinary extent, and is accountable for a large share of the increase. The average annual rate of the winter quarter in London is 2·577 per cent., but in the last winter quarter the rate becomes 3·088, or ·511 above the average. The funerals increased in the proportion of five to six.

The mortality of Lancashire and Cheshire is slightly above that of London, but is not so much above its average as the mortality of London.

When the thermometer falls to the freezing point of water, the mortality is raised all over the country; and the population of London is excessively sensitive to cold; thus the corrected average deaths for the second week of January are 1550, but the actual number of registered deaths this year was 2427. The mean temperature of the preceding week, instead of 37°·8, had fallen to 26°·7; and the temperature of one chill night (Thursday, January 7th) had descended to 14°·3, or to 17°·7 below the freezing point of Fahrenheit; and 877 lives were extinguished by "the cold wave of the atmosphere."

The excess of the rate of mortality per cent. during the last winter quarter was ·228 in the country districts and small towns, ·284 in the large town districts, exclusive of London, and ·511 in London, above the average of the quarter.

Fire is a necessary of life in this climate; and a warm hearth mitigates the severity of winter. Fire is as much required by the poor as by the rich; and a tax on coals, like a tax on salt, presses with undue severity on people of small means. Coal at the pit's mouth costs about 5*s.* a ton; and anything that facilitates its carriage and distribution in cities, by the abolition of duties and monopolies, or by laying down railways, if it lead to a diminution of cost, will preserve many lives that come to an untimely end in such severe weather as has reigned during the last winter months.

The rate of mortality in the South Eastern Division was 18 per cent. higher than it was in the two preceding March quarters; in the Northern Division, where the coal is cheap, the rise in the mortality was only 4 per cent.

Inflammation or congestion of the lungs and the air tubes are the common results of severe cold; and they carried off the aged in great numbers. Scarlatina, measles, small-pox, were prevalent and fatal; diphtheria and whooping-cough are also mentioned among the prevalent diseases of some districts. Where these diseases were epidemic, the mortality of districts was high, as the inhabitants suffered from the zymotic poison and from cold.

In the South Eastern Counties, Epsom, Croydon, and Kingston suffered severely; so did the Medway, Faversham, and Dover districts of Kent;

Hastings in Sussex; Portsea Island (small-pox was prevalent): Southampton suffered from measles and the cold; 342 people died in the district which in 1861 had 43,414 inhabitants. The rate of mortality in this rising town was therefore excessive. The mortality was also high in the Reading district and in Windsor. Several of the districts on the north side of London suffered severely from the cold weather; from scarlatina, small-pox, or measles; among them are Hitchin, St. Albans, Watford, and especially Berkhampstead, Amersham, Wycombe, Newport Pagnell, Oxford, Northampton, Peterborough, Leighton Buzzard, Luton, and Wisbech. The mortality in Ely was lower than in the winter of 1862; while in the above districts it ranged from 20 to 148 per cent. above the numbers in the winter of 1862. In Suffolk the deaths were 2211, or 474 more than in the winter of 1862; in Norfolk the numbers in the winters of 1862 and 1864 were nearly equal.

The South Western Counties experienced a high rate of mortality; and the deaths were 11,965 on a population of 1,835,714 in 1861.

The West Midland Counties suffered variously; Staffordshire and Shropshire less proportionally from cold than the neighbouring counties. Wolverhampton, Dudley, and Walsall remain in an unsatisfactory hygienic condition. The deaths in the Birmingham district (the old town) during the three last winters were 1418, 1765, and 1814.

The North Midland Counties experienced a medium rate of mortality; the deaths were 7073 in the winter quarter of 1862, and 8460 in that of 1864. The annual rate in the last winter was 25·84 per 1000.

The rate of the North Western Counties, Cheshire and Lancashire, was 30·97 per 1000. The mortality of the counties which are now suffering from the cotton crisis has always been higher than the mortality of the rest of the kingdom, owing chiefly to the sanitary defects of the towns. Under the Public Works Act which was passed during the last session some of these defects will be remedied. Mr. Rawlinson in his intelligent Report justly says:—"The high death-rate prevailing in "Lancashire towns has its main cause in the foul cottage cesspit. An "inspection of any town in the district will show this.* The works on which the people are employed at the instance of the local authorities are nearly all of a hygienic character, and cannot fail to be salutary through all future times.

Second Quarter.—April, May, June.

The marriages in the spring quarter were very numerous. The birth-rate was well maintained, although it has been occasionally higher in the same season. The rate of mortality was above the average for the three spring months.

Marriages.—In the three months that ended 30th June the marriages were 44,599. In the same period of 1862 they were 40,853; in that of 1863 the number was 44,146. The increase in the present year is due chiefly to South Wales, Monmouthshire, Yorkshire, Cheshire, Lancashire, and Durham. It was for the most part in the more northern divisions of England.

London returned 7687 marriages in the quarter; the North Western Counties, which comprise Cheshire and Lancashire, and contain a population rather larger than that of the metropolis, returned 7141 marriages. This difference in the results is perhaps less than might be expected in two populations which present much dissimilarity in many and important points of view. The South Eastern Counties and the South Western contain nearly equal populations, that of the latter division being rather less;

---

* Report of Robert Rawlinson, Esq., C.E., to the President of the Poor Law Board, April 1864.

and their marriage returns also closely agree, the numbers being respectively 3616 and 3577. But though the South Midland Counties have a larger population than the North Midland, the marriages in the former are 2155; those in the latter show a considerably higher number, namely, 2931.

The marriage-rate in the quarter (viz., proportion of persons married to 100 living) was 1·724, against an average of 1·689. In the June quarter of 1860 it rose to 1·766; in that of 1862 it fell to 1·614.

Births.—The birth-rate in the spring quarter (ending 30th June) was 3·65 per cent. per annum, against an average of 3·61. The excess, which is not great, is due almost wholly to the returns of Yorkshire, the Northern Counties, and Wales. In the Eastern Counties and the South Western, to which population is not drawn by a power of attraction equal to that which the great mining districts supply, the birth-rate was not as high as it had been in the two previous corresponding quarters.

The total number of births was 188,835. This is less by about 500 than the number in the same quarter of 1863. In London 25,066 children were born. In the counties of the cotton manufacture, Lancashire and Cheshire, where 30,201 were born, the birth-rate was higher. But the births were not numerous in those counties, if they are compared with former results; and West Derby alone in Lancashire gives indication by its returns of rapid growth in its population.

Increase of Population.—The deaths in the quarter were 116,880; and as the births in the same time were 188,835, there was an excess in the latter amounting to 71,955, which represents the natural increase of population. Immigration of unknown amount would modify the effect of emigration; but the Return of the Emigration Commissioners shows that nearly 20,000 persons of English origin left their native shores for distant settlements in the quarter that ended 30th June. Out of that number nearly 12,000 went to the United States, and 5000 to the Australian Colonies.

The number of emigrants of all nationalities was 86,783, of whom about 66,000, chiefly Irish, were bound to the United States. The emigration to that part of America has not before been so great in the June quarter since 1854. Almost nine-tenths of the Irish emigrants left for the United States.

Prices, the Weather, and Pauperism.—Wheat was unusually cheap. Its average price in the three months was 39*s.* 7*d.* per quarter. In the corresponding period of 1862 it was 56*s.* 8*d.*; in that of 1863 it was 46*s.* 2*d.* The mean of the highest and lowest prices of beef as sold by the carcase in Leadenhall and Newgate was 5¼*d.* per lb., and the same as in the June quarter of last year. Of mutton the mean price was 6⅛*d.*, being higher than in the same season of 1862–63. The best potatoes were sold from 2*l.* to 3*l.* per ton in Southwark. The price was less than half of that for which they had been obtained in the spring of last year, and still lower in proportion to the price of 1862. The working classes enjoyed cheap markets for supplying themselves with the chief necessaries of life.

The tables of pauperism exhibit a decline. The quarterly average numbers of poor persons relieved on the last day of each week were as follows:—

	In-door.	Out-door.
June Quarter 1862 - -	127,861	782,113
„ „ 1863 - -	127,063	873,503
„ „ 1864 - -	122,883	786,863

After cold and changeable weather at the beginning of the quarter, a warm period set in on the 9th April, and continued for forty-four days with but little interruption. From the close of that period (May 23d)

till the end of June, with the exception of a few days, the weather was cold; and the average defect of mean daily temperature during this last period, consisting of 39 days, was more than two degrees. At the beginning of May rain fell frequently; the cereal crops improved and looked healthy. In June the wind blew from the east; there was a deficiency of rain, and generally the weather was not good for agricultural purposes. The degree of humidity in the quarter was 73, which is 4 below the average. The air was uniformly dry, for the humidity was below its average in each of the three months.

The mean temperature of the air at Greenwich was 53·1°, which is above the average. In April and May it was in excess; in June it was in defect.

The fall of rain was less than the average in each month, and the whole amount did not exceed 3·5 inches.

Deaths; and State of the Public Health.—The deaths which were registered in the quarter that ended on June 30th amounted to 116,880. This number is above the average of the deaths in the months of April, May, and June; but it is less than the number of deaths which were registered in the corresponding quarter of the previous year, and less by 26,097 than the deaths in the three first fatal winter months of this year. Then 1571 deaths were registered daily; in the present quarter the daily deaths have been 1284. The mortality has been at the rate of 2·260 in 100 living, or ·073 above the average of the spring quarters of the previous ten years. The mortality of the town populations has been at the rate of 2·369, and of the country populations 2·110 per cent.: thus the towns lost 18,392 lives, and the country 10,000 lives, in excess of the deaths which would have been registered had the mortality been at the rate prevailing in the least unhealthy districts of England and Wales.

As a general rule the three spring months April, May, June are healthier than winter, and somewhat less healthy than the summer in ordinary years. They express very closely the average mortality of the year. Thus the average annual mortality per cent. in ten years (1854–63) was 2·214, and in the ten springs of those years 2·187; it was less in the spring quarters by ·027.

If we divide England and Wales into eleven great divisions, their prevailing mortality is found to differ. The country south of the Thames is the healthiest, and in general the deaths do not exceed 20 in 1000. Kent, Surrey, Sussex, Hampshire, and Berkshire constitute the South Eastern Division, where the mortality has been below its ordinary favourable average; for the annual rate prevailing in the quarter did not exceed 19·41 per 1000. Yet in some districts of Kent the deaths exceeded those in the corresponding quarters of the two previous years; this was the case in Bromley, Dartford, Tunbridge, East Ashford, Eastry, and Dover. Scarlatina prevailed in Maidstone. Hampshire and Berkshire were healthy.

The mortality of the South Western Division has been at the rate of 20·96, which is considerably higher than its average. The great epidemic of scarlatina which prevailed in England for some years subsided in 1861, but broke out again in 1862, and has since prevailed in various parts of the country with severity. Wiltshire and Somersetshire, and especially the districts around Bath and Bristol, continue still to experience its inflictions: the mortality was considerably above the average in Clifton, Bath, Clutton, Wellington, Chard, and Yeovil. These important districts might probably learn something useful from their venerable neighbour Salisbury, where the mortality continues low, and justifies the sanguine expectations of its sanitary reformers.

The mortality of the Eastern and of the South Midland Divisions was above the average; and among the unhealthy districts Uxbridge, Amersham, Eton, Bedford, Luton, and Wisbech may be named.

The people of the West Midland Counties died off at the rate of 22·32 in 1000; and this is slightly below their average rate.

The North Midland rate was 21·45; which is higher than its average.

The mortality of the North Western Division, including Cheshire and Lancashire, was 24·76; which is ·75 below its annual average mortality in the preceding ten years. The people of these counties might be rendered as healthy as the people of any other counties, by the application of the legitimate machinery for the purpose.

While the mortality of Lancashire is decreasing the mortality of Yorkshire is rising, and in the last spring months the people of the greatest county of England, which has often taken the lead of other counties on great occasions, very nearly surpassed Lancashire in its rate of destruction. The people died off at the rate of 24·55 in 1000; which was 1·46 above its high average rate. It would seem that no earnest efforts are made to secure the blessings of health in the prosperous towns of Yorkshire, where there is no lack of medical and engineering skill, and still less lack of enterprize or public spirit. The same temper which has exposed their valleys to the inundation of badly constructed reservoirs has left their towns exposed to the deadlier ravages of fevers, and of zymotic diseases of all forms. It is time that the men of Yorkshire should awake from their slumbers, when the tide of mortality is rising so rapidly and so threateningly.

It is a singular circumstance, that the mortality often augments with the increased prosperity of a district; and this is curiously illustrated by Ulverston, a romantic district extending from Morecambe Bay to Lake Windermere. Ulverston, in the ten years, 1841–50, was one of the healthiest districts of England; the mortality did not exceed 18 in 1000. A change took place, and in the ten years 1851–60 the mortality rose to 20 in 1000. The deaths in the last quarter were considerably above the average of previous years, caused, says one of the registrars, "in "part by the increase of the population, and in part by the prevalence "of scarlatina and measles." He adds: "but there is no distress; work "is plentiful, wages good, and provisions cheap. Labourers are earning "*3s. 6d.* a day; artisans *4s. 3d.* and upwards."

The population of many of the townships and parishes of the Ulverston district, at the feet of its fells, and round the shores of its meres, is stationary, and in some instances has declined: it is an old iron district, which had seen its works decay when coal came into use for smelting, but of late a pure hæmatite ore has been discovered in the carboniferous limestone of Dalton-in-Furness, for which there is a great demand. The population of the parish rose from 4683 to 9152 in the interval of the two last censuses, and, with the parishes in its vicinity, gave the increase which raised the population of Ulverston district from 30,556 in 1851 to 35,738 in 1861.

The mortality of the district of Ulverston, exclusive of Dalton, in the two last quarters, was at the rate of 26 and 23 in 1000; while that of Dalton was at the rate of 42 and 31; and it is in this sub-district that the spectacle is presented of "work plentiful, wages good, provisions cheap," and "the prevalence of destructive epidemics." This coincidence is reproduced over and over again. And it must not be supposed on that account that work, good wages, and cheap provisions are in themselves bad things; for they are as salutary as they are attractive to the masses of mankind. But our industrial armies are cut down by the camp diseases which are generated by the inadequate house accommodation, and by the want of sanitary arrangements, which are never carried out in the neighbourhood of new works. Impure water, impure air, their own exhalations, kill men, women, and children on the spot, and breed the leaven which devastates the towns and valleys in the vicinity. For the sins of a parish are often visited on its neighbours in thousands round.

Thus South Wales has been rendered prosperous by the mines, and unhealthy by the negligence of the people. The mining population appears to be even less careful of life than the manufacturing population.

The same causes which render new works unhealthy tend to destroy the natural advantages of watering places, to which the people living in cities resort for relaxation and in search of health. The drainage is costly, and its expense is postponed or evaded to the last moment, as it is at first doubtful whether the world will continue to resort to places which have often no natural advantages over others, and are selected, like some of the insalubrious German watering places, by mere accident.

Nearly all the English watering places are on good sites, and have many advantages over those abroad, and there can be no doubt that ultimately England will be the resort of foreigners who are in search of health, when we find a mortality-rate per 1000 so low as 15 in the Isle of Wight, 16 in Newton Abbot including Torquay, 17 in Cheltenham, 17 in Eastbourne, 18 in Worthing, 18 in Barnstaple, including Ilfracombe, 18 in Mutford, including Lowestoft.

The Brighton rate of mortality is 20 in 1000; but there is good reason for believing that it might be reduced to as low a rate as prevails at Cheltenham or Worthing, at a cost which would certainly be returned by its surer tenure of the public favour. Some of the seaside towns are draining their houses, and for this they deserve applause; but it appears to be very unreasonable to throw into the waters of the sea where visitors bathe the offensive matters which would fertilize the disinfecting chalk soils in the surrounding fields.

Why is the mortality of the Isle of Thanet, including Ramsgate and Margate, still 23? Why is the mortality of Hastings 24? Why is the mortality of Clifton 24? Why is it in Yarmouth at the rate of 25 in 1000?

Third Quarter.—July, August, September.

The weddings in the summer were much more numerous than they had ever been in the season. The births rose in a still more remarkable degree. The aspect of the returns was less satisfactory as regards the deaths, the number of which was greater than any previous summer number, except that of 1863, since the period of the last great cholera epidemic. The same statement is applicable to the deaths considered relatively to the population, as it was estimated for the successive summer quarters in which the deaths occurred.

Marriages.—The marriage of 89,350 persons is recorded in the quarter ending 30th September 1864, the number of marriages being 44,675 or 2743 in excess of the same quarter in 1863. The rate was 1·704 per cent., which is considerably above the average (1·597 per cent.), and is the highest rate that has been attained in any corresponding quarter, excepting in the September quarter of 1853, when the rate reached a maximum point of 1·718 per cent. The increase in the number of marriages, which presented itself so conspicuously after the bountiful harvest of 1863, has since been continuous, and points to the improved condition of the bulk of the population. Compared with the same quarter of 1863, the marriages in London increased from 8029 to 8581, in Staffordshire from 1698 to 1831, in Warwickshire from 1152 to 1289, in Cheshire from 910 to 1063, in Lancashire from 6091 to 6534, in West Riding of Yorkshire from 3467 to 3803, in Durham from 1100 to 1241, and in Glamorganshire (including Merthyr Tydfil) from 749 to 915. The marriages were stationary in North Wales, and decreased in Hertfordshire, Buckinghamshire, Oxfordshire, Dorsetshire, Cornwall, Herefordshire, and Shropshire.

Births.—In the quarter that ended 30th September, 181,015 children were born, a number which exceeds that of the same period in 1862 by about 8000, and that of 1863 by nearly the same amount. All the Eleven Divisions contributed to the increase. In London the births were 25,285; in Cheshire and Lancashire 28,187. In the South Midland Counties they were 10,830; in the North Midland, with a less population, they were 11,323.

The births in Islington were 1531, and those in Kensington were almost exactly the same number; but in 1861 the population of the former district was 155,000, while that of the latter was 186,000. Apparently the facts may be accepted as an indication of the rapid growth of building and population in Islington. The most populous of all the London districts is Pancras, in which about 200,000 persons are now living; and in the quarter it placed 1842 births on the registers. The district of Marylebone returned 1241 births, almost the same number as Halifax in Yorkshire, which, however, contained at the census a population less by 32,000 than the metropolitan district.

The birth-rate was 3·45 per cent., against an average of 3·31. This result is very remarkable, for in the ten years 1854–63 there is no example of the birth-rate attaining a point as high as 3·4 per cent. in the summer quarter.

Increase of Population.—The deaths in the quarter ending 30th September were 112,223; and as the births in the same time were 181,015, the natural increase of the population was 68,792. People died at the rate of 1220 daily; 1968 children were born daily; and if the result were not continually subject to modification by immigration and emigration, the population would be augmented daily by 748 persons.

The number of emigrants in the quarter who left ports in the United Kingdom where emigration officers are stationed was 46,467. The emigration, not only to the United States, but to all parts of the world, was less

by nearly 12,000 than it had been in the same quarter of last year. To the United States there went 28,853 persons, and to the Australian Colonies 11,241. Less than a fourth part of the emigration to the United States was of English origin; the Irish element constituted more than a half; Scotchmen and foreigners the remainder. The number that embarked at Liverpool, and which included persons of various origin, was to that which sailed from all other ports in the proportion of 27 to 19.

Prices, Pauperism, and the Weather.—The average price of consols was as low as $89\frac{1}{8}$. The price of wheat was 42*s.* 3*d.* per quarter, which is less than it was in the September quarter of 1863, and less by 14*s.* 7*d.* than it was in that of 1862. But beef and mutton showed no disposition to fall; and best potatoes at the Waterside Market, Southwark, were 5*l.* per ton, and were dearer than in the summer of 1863.

Pauperism declined in the quarter, as the following numbers will show:—

	In-door.	Out-door.
In the September quarter of 1862 the average number of persons relieved on the last day of each week - - - - - -	119,600	789,917
Ditto ditto 1863 - -	120,343	817,238
Ditto ditto 1864 - -	116,198	740,210

During the thirty-nine days which closed the spring quarter the weather was cold, and it continued cold for the first sixteen days of July. A warm period then set in, and lasted twenty-five days; but again a cold period, extending from the 9th to the 28th of August, succeeded, during which, though the days were warm, the nights were very cold, almost to frost. Thereafter, warmth alternated with cold till the end of September.

The most remarkable feature in the meteorology of the quarter is the low degree of humidity of the air in August; it was only 65, the average being 77, and saturation being represented by 100. There is no previous instance on record of a humidity in August less than 69. In that month the weight of vapour in a cubic foot of air was only 3·7 grains, which is one grain less than the average. This furnishes the only known instance of vapour being less than 4·3 grains in August.

The mean temperature of the air in the quarter was 59°·4, which is slightly below the average. The pressure of the atmosphere was in excess in July and August, and slightly in defect in September. The rain-fall amounted to 4·5 in. in the three months, viz., 0·3 in. in July, the average being 2·7 in.; 1·4 in. in August, the average being 2·4 in.; and 2·8 in. in September, the average being 2·4 in. The whole quantity was 3 in. below the average.

In one instance only, viz. in 1847, has the fall of rain from the beginning of the year to the end of September been smaller in amount than it has been this year.

And if the period of twenty-one months ending 30th September is adopted as the basis of comparison, it will be found that the period which terminated on that date in the present year is the driest on record.

Mr. Glaisher, from whose remarks on the Greenwich observations the above facts are derived, adds: "The season was remarkable for its great "dryness, particularly in August; for its ranges of temperature in that "month, which extended in many inland places to 50°; and for its cold "nights. Pastures were mostly bare at the end of that time; many "ponds and wells dried up, and water sold in many places from 1*d.* to "3*d.* per bucket."

Deaths; and State of Public Health.—The deaths registered in the quarter were 112,223, of which 18,272 occurred in London; 13,829 in the West Midland Counties, which include Gloucestershire, Herefordshire, Shropshire, Staffordshire, Worcestershire, Warwickshire; 18,157 in

Cheshire and Lancashire; 12,430 in Yorkshire. Those four divisions are the most important, in respect to population, of the eleven groups of counties or parts of counties into which England and Wales are divided with a view to a general comparison of the returns.

The total number of deaths was almost the same as that of the September quarter of last year, but considerably more than in that of 1862. But though the last two summer quarters present the same aggregate result, they do not exhibit the same uniformity in detail. The returns of the late summer, as compared with those of 1863, are heavier in London, the West Midland Counties, Monmouthshire, and Wales; lighter in the North Western Counties, Yorkshire, Durham, Northumberland, Cumberland, and generally in other parts of England. In Suffolk the deaths declined from 1847 to 1425; in Cornwall from 2036 to 1684; in Gloucestershire from 2585 to 2263; in Lincolnshire from 1951 to 1766.

The annual rate of mortality for the quarter in England and Wales was 2·141 per cent., against 2·000 as the average. With the exception of the summer of last year, the death-rate was higher than in any previous corresponding season since the cholera summer of 1854.

The causes which operated to produce this excess were not confined to cities, but attacked town and country, and raised the deaths in both, in equal amounts, above their respective averages. The town and country rates of mortality were 2·374 and 1·831 per cent., against their averages 2·253 and 1·713.

The mortality is lowest in the summer quarter. This rule holds invariably in England in ordinary seasons, and only fails to assert itself when malignant cholera, favoured by the heat of summer, rages over the country. But it is matter of interest to notice in the above table, that while it obtained as usual in ten of the great divisions of the kingdom, the rule did not hold good in London, where the mortality of the summer quarter was 2·406 per cent., and exceeded that of the preceding spring, when it was 2·353. The undue prevalence of diarrhœa or English cholera in London, from whatever cause it may arise, has made summer more fatal to children than spring. The deaths from that disorder last quarter in the metropolis were 2210; and in the ten years 1851–60 it was much more fatal there than in any other Division except the North Western Counties, Cheshire and Lancashire. The districts of the cotton manufacture have suffered greatly in former times from the complaint in question; and it may perhaps be accepted as a symptom of comparative exemption from it, and of improved sanitary condition, that the mortality per cent. was 2·322, against 2·476 in the spring months. Lancashire was at least as healthy as Yorkshire, in which the mortality of last summer was 2·366.

The healthiest of all the Divisions was the South Western Counties (Wiltshire, Dorsetshire, Devonshire, Cornwall, and Somersetshire), in which the death-rate was 1·820. It was but slightly higher (1·866) in the south eastern portion of the island, or that which lies south of the Thames. From its minimum it ranged over the country, through various gradations, to its maximum, which was 2·406, and which prevailed in London.

It may be presumed that emigration from the North Western Counties during the continued depression of their staple industry has confined the registration of deaths in those parts within narrower limits than it would otherwise have attained. That cause has no doubt had its effect; but the fact that the registration of births, simultaneously conducted, was not inactive, proves that it did not operate to an important extent.

The summer quarter of 1860 was distinguished by its wet, its cold, its want of sunshine, and generally by what is known as "bad weather;" it was distinguished also by a singularly low rate of mortality. In each month the mean temperature of the air was four degrees below its average,

and ten inches of rain fell. In the summer of the present year the monthly temperatures were near their averages; the amount of rain was less than five inches; and extremes of diurnal temperature were suffered, which had not been experienced in 1860. This brief statement of differences of meteorological constitution in the two seasons probably does not embrace all the influences that were at work; and when the records of the two entire years are completed, both for England and Scotland, an examination of the facts in more detail will be instructive; but the main result has been ascertained, and is sufficiently striking, namely, that under a higher but less uniform temperature, and an unusual defect of humidity, the deaths of last summer, which were 112,223, would have been only 89,336 under the rate of mortality that prevailed in 1860; and therefore 22,887 deaths occurred in England which would not have occurred if the season in all its circumstances had been as favourable to health as the summer of 1860.

The Registrars have in some cases mentioned the complaints that were most fatal in their districts, and facts in connexion with them which had fallen under their notice casually or in course of professional duties. Their notes show that scarlatina was the prevailing type of disease; that it visited many parts of the country, both north and south, and not a few with much severity. It prevailed in Aldershot, and in the Camp there; of 72 deaths in All Saints, sub-district of Hastings, nearly the half was from scarlatina; and almost half of the mortality in Horsham, North sub-district, was from the same cause; it prevailed in Petworth; and in Faringdon, where 26 out of 46 deaths were from scarlatina. It caused nearly a third of the total deaths in Hitchin, and more than half of those in the parish of Witney, and 54 out of 193 deaths in the sub-district of St. Giles, Northampton. It prevailed in Dunstable and Luton; and in the latter was fatal in 44 cases, the deaths from all causes being 180. Diphtheria prevailed at Flegg in Norfolk, where houses are overcrowded and drainage defective, and at Stratton; scarlatina in Eynsford, where a third part of the 74 deaths was due to it; also in the district of Walsingham. Twenty-two out of the 54 deaths in Brixham, Devonshire, were from the same disease; and at Tavistock it caused no less than 111 out of 179 deaths. It caused half of the mortality at North Hill, Launceston; 20 out of 43 deaths at Dulverton in Somersetshire; it was fatal at Bath and other parts of the same county. Eleven out of 22 deaths were from scarlatina in the sub-district of Bromyard, Herefordshire. The Dudley district in Staffordshire suffered severely both from small-pox and scarlatina, each of those diseases having caused 59 deaths at Rowley Regis, and each of them 45 at Tipton. Out of 90 deaths in Halesowen (Stourbridge), 34 were from scarlatina. In Lincolnshire, diphtheria prevailed at Tetford; scarlatina in Lincoln, Great Grimsby, and the parish of Caistor. In Prescot (Lancashire) it prevailed much; out of 349 deaths in St. Helen's, in that district, 105 having been from scarlatina. It caused 58 out of 148 deaths in the sub-district of Newchurch (Haslingden), and 33 out of 86 in Ulverston. But though it was common in many parts of the same county, it was perhaps not so prevalent and fatal as diarrhœa, which in summer abounds in the cotton districts. In Yorkshire, Todmorden, Huddersfield, Halifax, and Bradford, all suffered much from scarlatina. But it appears to have been almost entirely absent from Sheffield, where diarrhœa predominated over other complaints. Blaenavon (Abergavenny) and Newport in Monmouthshire; Merthyr Tydfil, Neath, Swansea, and other parts of Wales, had a sharp attack of scarlatina. This review of the local reports is rapid and imperfect, but it seems to indicate that scarlatina was most fatal in the south; diarrhœa more, or at least equally, fatal in some northern districts.

Small-pox attacked Alverstoke, Liskeard, Clifton, Wolverhampton, West Bromwich, Dudley, Stourbridge, Worcester, Birmingham, Coventry, Dud-

deston (Aston), Shipston-on-Stour, the parish of Blaby, where 18 deaths occurred from it, Leicester, Runcorn, Chester, Liverpool, Prescot, Thornton (Bradford), Wortley (Kirkstall), Sheffield, Scarborough, Yarm (Stockton), Easington, Berwick, and Neath. It is stated that "there is no medical officer of health in Birmingham, and vaccination is greatly neglected."

Glendale in Northumberland is a model district in statistical tables; with Farnborough, Bellingham, and Rothbury, it stands a monument of salubrity, to which a sanitarian immediately turns, when he seeks a comparison or would direct an aim. In the ten years 1851–60, the average mortality of Glendale was only 15 deaths to 1000 living. But the Registrar of Ford, one of its sub-districts, gives in his report a striking example of the natural advantages of a situation defeated by the apathy or ignorance of its inhabitants. When a village community abuses the patrimony which heaven has bestowed, and begins to suffer the effects, it is well if the minister, the surgeon, or other intelligent monitor will step in to warn and advise. The Registrar writes :—" The village of Lowick " has been for some months heavily afflicted with typhoid fever, arising " from its imperfect sanitary condition, there being no drainage to " convey the stagnant water and other noxious matter from the place.

TABLE 1.—**Annual Rate** of **Mortality** per Cent. in **Town** and **Country Districts** of **England** in each **Quarter** of the Years **1854–1864.**

The following are the names of the 139 Districts and 56 Sub-districts comprising the CHIEF TOWNS :—All the 37 Districts of London; Croydon, Kingston, Richmond, Gravesend, Medway, Tunbridge: *West and East Maidstone Sub-districts* (Maidstone); Canterbury; *Minster Sub-district* (Sheppey); Thanet, Dover, Hastings, Brighton; *Shoreham Sub-district* (Steyning); Portsea Island, Alverstoke, Southampton; *Winchester Sub-district* (Winchester); Reading, Brentford, Edmonton; *St. Clement Sub-district* (Headington); Oxford, Northampton; *Peterborough Sub-district* (Peterborough); *Bedford and Kempston, and Bedford and Cardington Sub-districts* (Bedford); *Luton Sub-district* (Luton); Cambridge, West Ham, Colchester, Bury St. Edmunds, Ipswich, Yarmouth, Norwich, King's Lynn, Melksham, Salisbury; *Weymouth Sub-district* (Weymouth); Exeter; *Torquay Sub-district* (Newton Abbott); Plymouth, East Stonehouse, Stoke Damerel, Truro, Redruth; *St. Mary Magdalen and St. James Sub-districts* (Taunton); *Bridgwater Sub-district* (Bridgwater); Bath; *Bedminster Sub-district* (Bedminster); Bristol, Clifton; *St. Nicholas and St. John Baptist Sub-districts* (Gloucester); Cheltenham; *Hereford City Sub-district* (Hereford); Madeley, Shrewsbury; *Stafford Sub-district* (Stafford); *Newcastle-under-Lyme Sub-district* (Newcastle under-Lyme); Wolstanton, Stoke-upon-Trent; *Burton-on-Trent Sub-district* (Burton-on-Trent); Wolverhampton, Walsall, West Bromwich, Dudley, Stourbridge; *Kidderminster and Lower Mitton Sub-districts* (Kidderminster); Worcester, Birmingham, Aston, Coventry, Warwick; *Loughborough Sub-district* (Loughborough); Leicester; *Boston Sub-district* (Boston): *Lincoln Home Sub-district* (Lincoln): *Great Grimsby Sub district* (Caistor); Radford, Nottingham; *Newark Sub-district* (Newark); Derby, Hayfield, Stockport; *East and West Macclesfield and Sutton Sub-districts* (Macclesfield); *Runcorn Sub-district* (Runcorn); *Congleton Sub-district* (Congleton); *Chester Castle and Chester Cathedral Sub-districts* (Great Boughton); Birkenhead, Liverpool, West Derby, Prescot, Wigan, Warrington, Leigh, Bolton, Bury, Barton-upon-Irwell, Chorlton, Salford, Manchester, Ashton, Oldham, Rochdale, Haslingden, Burnley, Blackburn; *Chorley Sub-district* (Chorley); Preston; *Lancaster Sub-district* (Lancaster); Keighley, Todmorden, Huddersfield, Halifax, Bradford, Kirkstall, Hunslet, Holbeck, Bramley, Leeds, Dewsbury, Wakefield, Barnsley, Ecclesall Bierlow, Sheffield; *Doncaster Sub-district* (Doncaster); *Bootham, Micklegate, and Walmgate Sub-districts* (York), Sculcoates, Hull; *Scarborough Sub-district* (Scarborough); *Darlington Sub-district* (Darlington); Stockton, Hartlepool; *St. Oswald and St. Nicholas Sub-districts* (Durham); Houghton-le-Spring, Sunderland, South Shields, Gateshead, Newcastle-upon-Tyne, Tynemouth; *St. Cuthbert and St. Mary Sub-districts* (Carlisle); *Whitehaven Sub-district* (Whitehaven); *Kendal Sub-district* (Kendal); *Newport Sub district* (Newport); *Cardiff Sub-district* (Cardiff); Merthyr Tydfil; *Llangafelach and Swansea Sub-districts* (Swansea); *Llanelly Sub-district* (Llanelly); *Pembroke Sub-district* (Pembroke).

Note.—The three months January, February, March, contain 90, in leap year 91 days; the three months April, May, June, 91 days; each of the last two quarters of the year, 92 days. For this inequality a correction has been made in the calculations, also for the difference between 365 and 365·25 days, and 366 and 365·25 days in leap year.

"It contains between 600 and 700 inhabitants, and there is scarcely a "house in which there is not sickness; in some houses there are two "and three, and even four cases in a family; and there have been two "or three deaths from this cause. It is also ill supplied with water; at "all times the water is objectionable as to quality, but for these last "three months it has been very deficient in quantity; and the inha-"bitants are suffering much, both from the impurity and insufficient "supply of that first necessary of life."

It was remarked in last report that "South Wales had been rendered "prosperous by the mines, and unhealthy by the negligence of the "people;" and reference was made to the "want of those sanitary "arrangements which are never carried out in the neighbourhood of "great works." Neath furnishes a case in point, for the Registrar says: —"The deaths in this quarter are much above the average of corre-"sponding quarters in the last five years. This is due in some degree "to increase of population consequent on the erection of large works in "the district, and also to a large number of deaths from scarlatina and "small-pox, which occurred chiefly in an overcrowded and ill-drained "locality in this town and in the neighbouring village of Britonferry."

In All Saints Cemetery, Newcastle-on-Tyne, 521 interments of children *reported* still-born have taken place within the last seven years. The

non-registration of the still-born is mentioned by the Registrar as subject of regret. He thinks they should not be interred without a Coroner's order or Registrar's certificate.

Fourth Quarter.—October, November, December.

The population goes on increasing. The marriages in the last quarter of the year were numerous even for the Christmas season. The births were less numerous than in the corresponding quarter of 1863; but with that exception the number is higher than it has ever been since registration began. Death has unhappily also been unusually busy. No autumn death-rate has been observed in England higher than that of the last quarter, excepting in 1846, 1847, and 1858. Bread has been cheap,

and employment, except in Lancashire, plentiful; but the weather has been cold, and the waters of the wells and streams have been scanty, as well as impure, through the deficiency of rain-fall; of which the storage about dwelling houses is everywhere deficient. Fever and scarlatina have ravaged several cities where the sanitary arrangements have never yet reached the great body of the population.

Marriages.—The number of weddings in the three months ending 31st December was 53,125, or on an average 577 daily. It was greater than in any previous quarter. In London it rose from 7811 and 7856 in the corresponding quarter of the two previous years to 8711. The West Riding of Yorkshire, Durham, Northumberland, and South Wales also showed by a clear increase in their marriages that the times were prosperous with them.

In Lancashire the marriages which were 6499 in the last quarter of 1863 decreased to 6157 in that of 1864; but they were considerably more numerous than in the same period of 1862.

The annual marriage-rate of the fourth quarter was 2·022, against an average rate of 1·963; in the ten years 1855–64 there is only one instance of a higher rate (2·026) which occurred in 1859.

Births.—The births of 177,478 children (90,260 boys and 87,218 girls) were registered during the quarter ending 31st December, a number which, although above the average of the season, is less by 819 than that registered in the last quarter of 1863: the decrease is spread over many of the counties, but in the following the births are in excess of those in the corresponding season of 1863: Surrey, Kent, and Middlesex (extra-metropolitan), Cambridgeshire, Suffolk, Norfolk, Dorsetshire, Herefordshire, Shropshire, Staffordshire, Worcestershire, Rutland, Durham, Westmorland, Monmouthshire, and South Wales. The birth-rate was 3·38 per cent. against 3·46 in 1863, the average being 3·27.

Increase of Population.—177,478 births were registered in the quarter ending 31st December, and there were 123,451 deaths during the same period, leaving a natural increase of 54,027 to the population, or 587 daily.

The number of emigrants in the quarter who left ports in the United Kingdom where emigration officers are stationed was 33,495, being 12,972 less than in the previous quarter, and 9628 less than in the same quarter of 1863.

12,192 of the emigrants were of English origin, of whom 4905 sailed for the United States, 335 to the North American Colonies, 5529 to the Australian Colonies, and 1423 to other places.

Of 15,080 emigrants of Irish origin, 10,756 went to the United States, and 3897 to the Australian Colonies: emigrants of Scottish origin exhibited a preference for the Australian Colonies, as of 2491 who left these shores, 1232 went to those colonies, and 1019 to the United States.

The emigrants from the United Kingdom during the year were 208,900, of whom 57,971 were of English, 15,394 of Scotch, 118,188 of Irish origin, and 17,347 were Foreigners.

Prices, Pauperism, and the Weather.—Owing to the accruing dividend the average quotation of Consols is somewhat higher than the low rate that prevailed in the previous quarter, the price now being $89\frac{5}{8}$ against $89\frac{1}{8}$ in the three months ending 30th September. Wheat sold at decreasing prices, the average for the three months being 38*s.* 5*d.* per quarter against 40*s.* 6*d.* in the corresponding period of 1863, and 48*s.* 2*d.* in 1862. The people have thus enjoyed the blessing of cheap bread during a cold period of the year. The high price of meat is a matter of daily experience with all consumers; in the last quarter of 1863 beef sold on an average at 4*d.* to $6\frac{1}{4}$*d.* per lb. (by the carcase) at Leadenhall and Newgate Markets, but in the quarter ending 31st December last the price ranged from $4\frac{1}{2}$*d.* to 7*d.*, according to quality. The wholesale price of mutton was 5*d.* to 7*d.* in the last quarter of 1863, and it was $5\frac{1}{4}$*d.* to $7\frac{1}{4}$*d.* in the same period of 1864. The growers and importers of meat will, we may hope, succeed in increasing the supply of an article of diet so necessary to the hard-working population of this country. The dry summer was prejudicial to the crop of potatoes, and the price of this essential vegetable and anti-scorbutic was 25 per cent. higher than in the autumn of 1863; the wholesale price of the best qualities was 60*s.* to 80*s.* in the last quarter of 1863, and rose to an average of 80*s.* to 95*s.* in the same quarter of 1864.

It is satisfactory to remark a decrease in the number of paupers receiving relief.

	In-door.	Out-door.
In the December quarter of 1862 the average number of persons relieved on the last day of each week was - - - - -	132,663	907,514
Ditto ditto 1863 - -	130,072	804,940
Ditto ditto 1864 - -	128,326	771,908

Mr. Glaisher states that:—

The weather at the beginning of the quarter was cold, and the average deficiency of daily temperature amounted to 2°. From the 12th October to the 29th the period was warm; an excess of temperature of $2\frac{3}{4}$° on the average of those days took place. A bitter cold period succeeded, continuing till the 12th November, during which a daily deficiency was experienced of no less than $5\frac{1}{4}$° of heat. From the 13th November to

the 13th December the weather was generally warm, but there were cold periods of two and three days together; but upon the whole there was an excess of temperature averaging $2\frac{1}{4}°$ daily. From the 14th December to the end of the quarter the weather was changeable. On the 17th the deficiency of temperature was as large as $15\frac{3}{4}°$, and on the 20th there was an excess of 3°, followed again by a considerable deficiency, which generally prevailed; and the average defect of temperature from the 14th to the end of the month was nearly 4° daily. The mean temperature of the quarter at Greenwich was 43·7°.

The fall of rain was in defect to the amount of 1·7 in. in October, slightly above the average in November, and showed a deficiency of 1·3 in. in December. The amounts fallen are respectively 1·1 in., 2·6 in., and 0·6 in.

Deaths, and State of the Public Health—123,451 deaths (63,117 males and 60,334 females), were registered in the last 92 days of the year, a number never yet reached in any corresponding season since the commencement of registration. The rate of mortality during the quarter was 2·349 per cent.; this high rate has only been exceeded in the autumn season on three occasions, namely, in 1846 when it was as high as 2·545 per cent., in 1847 when it reached 2·389 per cent., and in 1858 when it attained 2·406 per cent.; the average of ten corresponding quarters was 2·180 per cent. This excessive mortality deserves serious attention and thorough investigation; and it may be expected that the corporate bodies of the kingdom will be alive to the necessity of improving the sanitary condition of our towns, and of appointing medical officers of health, whose duty it will be to watch and keep the public informed of the state of health, to trace the progress and causes of the epidemics which periodically ravage our densely populated districts, and to suggest promptly the best means of bringing them into a healthy condition. The excess in the rate of mortality is spread over nearly all the Divisions of England and Wales. In London the deaths were 19,788 against 17,732 in the same season of 1863. Many districts in the South Eastern Counties shared in the high rate of mortality, and suffered from scarlatina, although in other districts, including the Isle of Wight, the deaths were below the average. The Tables show that most of the districts of the South Midland Counties were in an unhealthy state, and the same may be said of the Eastern Counties, particularly Norfolk; Norwich returns 572 deaths against 419 in the same period of 1863; Yarmouth has 233 against 195 in 1863 and 174 in 1862. In the South Western Counties, scarlatina was very fatal, causing 18 out of 45 deaths in the sub-district of St. Thomas, 23 out of 60 deaths in the Brixham sub-district of Totnes, 28 deaths in the sub-district of Tavistock, 19 out of 38 deaths in the Wiveliscombe

* Approximated to the results of Robinson's Anemometer by reductions from Whewell's up to 1859.

sub-district of Wellington. 17 out of 61 deaths in the Yeovil sub-district were caused by scarlatina, and the drainage of the town is represented as being in a very bad state. The Registrar of the Lansdowne sub-district of Bath says :—

17 deaths have been registered from scarlatina, 3 from small-pox, one from measles, and one from diphtheria. Scarlatina still continues to prevail in this district. Better sanitary arrangements are required for the whole of the lower parts of the city, together with a better water supply, and an unpolluted river, freed from sewage.

The districts of the West Midland Counties have suffered severely from small-pox ; scarlatina and typhus were also very fatal. In Clifton sub-district 29 deaths were from small-pox ; in Leominster sub-district 26 out of 56 were from the same disease ; in St. Mary, Shrewsbury, this disease was fatal in 20 instances ; in the Wellington sub-district in 13 ; in Burton-upon-Trent in 22. Scarlatina prevailed with great virulence in Wolverhampton, causing 69 deaths in the Bilston sub-district.

In West Bromwich small-pox, scarlatina, and typhus were very fatal. In Worcester a large number of persons have been vaccinated and re-vaccinated, which has materially checked the spread of small-pox. Birmingham and Aston have been severely visited by small-pox and scarlatina. The Registrar of the St. Martin's sub-district of Birmingham says :—

The deaths are above the average. Small-pox has been very prevalent, and proved fatal in 22 cases. Vaccination is frequently disregarded. There is no local medical officer of health in the town.

It is to be hoped that this important town, following the example of Liverpool and other places, will not long remain without the services of an efficient Officer of Health.

In the North Midland Counties several districts were visited by small-pox, scarlatina, and typhus, particularly Lincoln, where good water is represented as having been exceedingly scarce for a very long time.

Most of the districts of the North Western Counties show a high rate of mortality, chiefly owing to the prevalence of small-pox, scarlatina, typhus, and measles. Liverpool suffered severely. The Registrar of the Mount Pleasant sub-district says :—

The deaths are considerably above the average, chiefly owing to the remarkable prevalence of typhus ; no less than 310 deaths are ascribed to that disease, a large number of them occurring in the workhouse. Small-pox proved fatal in 32 cases ; 20 deaths occurred from diarrhœa, and 19 from scarlatina.

The Officer of Health will no doubt meet with the active support of the local authorities in devising means to improve the sanitary condition of this populous and important town. In Prescot a very remarkable mortality prevailed; the deaths were 786 against 454 in the same season of 1863 and 443 in 1862. The sanitary state of the town is stated to be very bad; vaccination is neglected, and want of cleanliness is observable in the houses of the poorer classes. The Registrar of the St. Helen's sub-district of Prescot says:—

The deaths exceed the average considerably. The mortality has been greatest amongst children in consequence of the prevalence of scarlatina and small-pox. 120 deaths occurred from scarlatina, and 24 from small-pox. Small-pox is most prevalent in that part of the town noted for its defective sanitary arrangements, and inhabited principally by the Irish. In this portion of St. Helen's the evils arising from want of sewers, unpaved streets, small and unhealthy dwellings, are still further increased by the crowding of several families in one house, and an entire absence, apparently, of all ideas of cleanliness.

In the Oswaldtwistle sub-district of Blackburn 300 persons were attacked by typhus, of which 16 died: the medical men attribute the prevalence of the disease to bad drainage.

Many districts in Yorkshire experienced a high rate of mortality owing to the prevalence of small-pox, scarlatina, typhus, and measles; and the same diseases were more or less fatal in the districts of the Northern Counties and also in Monmouthshire and Wales.

Health of London in 1864.

In London 102,625 children, of whom 52,383 were boys, and 50,242 were girls, were born last year; and 78,238 persons, namely, 39,551 males, and 38,687 females, died in the same time. The population which, by continual process, bears these twin fruits of life and death, is estimated to have been composed at the middle of the year of 2,948,963 lives; it approached the completion of its third million, and dwelt in every degree of density and in endless variety of condition on an area of 122 square miles. Of this surface 71 square miles, being more than half, are occupied by that portion of the metropolis which lies in Surrey and Kent, and is known in these reports by the term "South Districts;" two out of the three millions of people, and part of the third, live on a smaller area, but on the northern and more historic side of the river.

The births of boys were to those of girls in the proportion of little less than 105 to 100; a proportion common in London and England, though

it varies in the several counties of England. But this male majority in the births does not avail to secure a male majority in the population; for in England the aggregate number of women and girls is 105 to 100 men and boys, and in London the proportion is as 114 to 100. The mortality of males is greater than that of females, and the great metropolitan labour mart appears to draw and keep within its vortex more unmarried women from the country than unmarried men.

When short periods of time are taken, the operation of a law is subject to accidental irregularities; but the uniformity of the rule, which in births gives a majority to males, is apparent from the fact that of the fifty-two weeks of last year, in only nine was the number of girls registered greater than that of boys.

A similar excess of males over females prevails in the deaths; but it is less in degree, and when weekly numbers are taken, exceptions to the rule, as might be anticipated, are more numerous. In twenty out of the fifty-two weeks the entries in the death-registers of females exceeded those of males. It is chiefly in severe weeks of winter cold that this exceptional preponderance will obtain, because bronchitis finds its victims most readily amongst old persons, and in the present constitution of the London population it is in the advanced stages of life that the female element, as compared with the male, exhibits a great abnormal development. At sixty years of age and upwards there were, at the Census of 1861, 146 women to 100 men.

The births fluctuate from week to week within narrower limits than the deaths. The greatest number of births was returned in the eleventh week, and was 2177; the lowest number in the twenty-fourth week, and was 1776. But in January cold or other unfavourable atmospheric causes raised the deaths to what may be termed not unjustly "a plague rate of mortality;" for in the second week of the year they were 2427, and in the third week 2180, and in thirteen other weeks, chiefly at the beginning or towards the end of the year, they were above 1600. On two nights in the first week of January the thermometer fell as low as 14° and 15°. The lowest number of deaths was returned in the twenty-second week, when it was 1213. It will furnish a further indication of the high mortality, to state that in only eleven weeks during the year was the number below 1300.

The rate of mortality was 2·653 per cent. of the population (for males 2·876; for females 2·459). The average in twenty-five years, which include two periods of epidemic cholera, was 2·432. The death-rate was not so high as it was last year, in any of the preceding twenty-four years, except 1847, the influenza year, when it was 2·695 per cent., and 1849 and 1854, the two cholera years, when it rose to about 3 per cent.

TABLE 7.—LONDON.—**Births** and **Deaths** in the Thirteen Years **1852** to **1864**.

YEARS.	1852	1853	1854	1855	1856	1857	1858	1859	1860	1861	1862	1863	1864

DEATHS - Females -	26575	29217	36546	30588	28198	29334	31514	30283	30652	32146	33083	34706	38687
ANNUAL MORTALITY per 1000 - -	22·61	24·41	29·43	24·31	22·09	22·41	23·90	22·69	22·49	23·18	23·53	24·47	26·53

In the two groups of districts which contain the densest populations, namely, the Central and East districts, in the former, a population of about 400,000 living on three square miles, and in the latter another of about 600,000 persons living on ten square miles, the mortality rose to 2·9 per cent. In the West, North, and South districts the death-rate was not much below or above 2·5 per cent., but the first of these three groups was the healthiest, perhaps because the people who live in it may enjoy on the whole the amplest provision of food, fuel, clothing, and house shelter against inclement seasons.

The mean temperature of the air was below the average of 23 years in seven months out of the twelve; in two it did not exceed the average, and in two out of the remaining three months was but slightly above it. In April and May the streets of London, under favour of the weather, were unusually clean; in the neighbourhood of squares the air was fragrant with lilac and hawthorn blossom; and it became possible for pedestrians to pursue their daily walks with enjoyment.

The following table exhibits the numbers of deaths in the last five years in some of the larger districts, in which the increase that occurred last year appears to have been the most important:—

	1860.	1861.	1862.	1863.	1864.
Kensington - -	3814	3925	4097	4371	4946
Westminster - -	1700	1751	1704	1936	2144
Pancras - -	4268	4703	4536	4747	5457
Islington - -	3028	3123	3496	4340	4594
Hackney - -	1555	1748	1753	1937	2148
Shoreditch - -	2987	3179	3327	3330	3648
Bethnal Green -	2218	2219	2555	2597	3080
Whitechapel - -	2340	2342	2574	2713	2813
Poplar - -	1900	1847	2053	2430	2806
Lambeth - -	3303	3461	3773	3756	4265
Greenwich - -	2819	3051	3129	3297	4051
Lewisham - -	1122	1080	1126	1107	1419

It will be seen that in nearly all of the above districts a less favourable condition of health began to be developed in one or two years antecedent to 1864.

Bronchitis, typhus, scarlatina, diarrhœa, and measles were the prevailing forms of disease in the year. Bronchitis caused 8788 deaths, against 6001 in the previous year; typhus 3703, the numbers in 1862–63 having been 3598 and 2808. This latter disease has acquired a great increase of activity in the last three years; and it was more fatal in the latter half of 1864 than it was in the earlier part of the year. The deaths from scarlatina were 3244, and were much less numerous than those of the previous year. Diarrhœa, which exhibited a considerable increase, was fatal in 2894 cases. August was cold, and in this respect was unfavourable to its development; but in the great drought, impurity in the soil and air would accumulate. There was a great increase in measles, and the deaths from it were 2788.

Sixty-five deaths from typhus occurred in the Belgrave sub-district, 103 in Westminster, 60 in the South sub-district of St. Giles, 55 in Hoxton New Town, 85 in Mile-end New Town, 92 in Mile-end Old Town, 177 in Bow and Poplar, 77 in the Borough-road sub-district, 82 in Deptford, 77 in Greenwich, 113 in Woolwich, 73 in Plumstead.

There were 97 deaths from measles in the Kensington Town sub-district, 128 in Islington, 101 in the Holborn district, 111 in St. Luke, 160 in the Shoreditch district, 185 in Bethnal Green, 136 in St. George-in-the-East, 110 in Stepney, 116 in Mile-end Old Town, and 142 in Bow and Poplar. There were 106 deaths from scarlatina in the St. John sub-

district of Westminster; and the disease was very fatal in Pancras, Islington, Shoreditch, Deptford, Woolwich, and other places.

The deaths in Public Institutions rose from 11,112 in 1863 to 12,731 last year. Included in those numbers are the deaths in Workhouses, which increased from 6187 to 7055; and those in Hospitals, which rose from 4247 to 4827. Many old persons in the Workhouses would fall under bronchitis, though their condition, both sumptuary and sanitary, was undoubtedly superior to the condition of a large proportion of that class of the people outside from which they had been drawn. This disease of winter finds its subjects chiefly in poor uncomfortable dwellings, whose inmates can offer but a feeble resistance to frost, cold winds, and other "powers of the air."

Phthisis and bronchial complaints are more fatal both to men and women in Liverpool and Manchester than in London. But if the Metropolis is compared with ten other large divisions of England it is found that phthisis is more fatal to males in London than in any other division, not excepting the north-western counties, which include the towns just mentioned. But the mortality of females from that disease is singularly low, partly perhaps because domestic servants, shopwomen, and milliners who have come from the country retire, when health fails them, to their native air. On the other hand the death-rate from bronchitis and pneumonia for both males and females is high; it is higher in London than in any of the ten groups of counties.

If coal were cheap, the greater command which the poor would have over that commodity would materially help to reduce the winter rate of mortality. And if smoke were abated at domestic fires as well as at bakers ovens and public furnaces, by more thorough combustion of fuel, the carbonaceous particles which they emit would not darken the air and pollute whatever they touch, nor, by forcing a passage into the throat and lungs, aggravate or excite fatal pulmonary complaints in human beings.* Given a broad river with a temperature at the time above that of the air; let there be another vast moisture-exhaling surface on its banks, sixty or more square miles in extent, and this area covered with houses which pour smoke from a million chimneys into a still atmosphere; and the result is that almost impervious fuliginous firmament called "a London fog."

† This Table is compiled from the Weekly Returns made by the Registrars of London, and relates to the 52 or 53 weeks of each year.

* See Dr. Watson's "Principles and Practice of Physic:" *Spurious melanosis.* Vol. II., pp. 229–32.

But London has acquired almost as much fame for that highly agglutinative compound its mud as for its fogs ; and perhaps there is more connexion than is generally supposed between them. It would be a humble but invaluable sanitary work if the streets were subjected to a perfect system of purification ; if they were frequently and thoroughly cleansed and dried. The attention of Boards of Works may be well directed to this end. The present expedient, by which householders who pay rates for parochial management are expected to clean the pavement in front of their own houses, is unjust in principle and futile in practice. The whole width of thoroughfare from frontage to frontage should get the benefit of the same brooms and shovels. Old persons, whose avocations compel them to be much out of doors, in feebly urging their steps over filthy streets waste much of that strength which should be husbanded for the employments by which they live. And how can poor people be expected to keep the inside of their houses free from damp and dirt when all the adjacent exterior is a "mud-ocean ?" A good scavenger is a practical teacher of that cleanliness which is said to be next to godliness ; and if the streets were well kept, the crowds who frequent them would read excellent plain sermons in the stones.

The increase of typhus is a matter of much regret. The Medical Officers of Health have to contend not only with the evils which attend rapidly increasing populations, but also with the overcrowding of particular localities by the clearing of neighbourhoods for improvements and extensive railway works.

* For the years 1849-59 the results are only approximative, having been reduced to Robinson's Anemometer from observations made with Whewell's.

† By Robinson's Anemometer.

POPULATION OF THE UNITED KINGDOM,

with Army, Navy, and Merchant Seamen abroad belonging thereto.*

Middle of Years.	Persons.	Males.	Females.
1801 -	**16,302,410**	8,096,082	8,206,328
1811 -	**18,532,522**	9,194,348	9,338,174
1821 -	**21,300,573**	10,519,256	10,781,317
1831 -	**24,423,588**	12,004,025	12,419,563
1841 -	**27,077,095**	13,325,889	13,751,206
1851 -	**27,764,034**	13,656,998	14,107,036
1861 -	**29,358,927**	14,397,427	14,961,500
Estimated. 1866 -	**30,329,207**	14,775,810	15,553,397

* In estimating the number of men in the Army, Navy, and Merchant Service abroad, a certain proportion belonging to foreign countries and the colonies has been excluded. In 1811 the troops and seamen were 640,500, but as this number included natives of colonies and foreign parts, only 502,536 were taken.

[The above numbers (1801–61) have been deduced by raising the enumerated population of the United Kingdom, including the islands in the British Seas, (*see* Table 9. p. 84. of Vol. III. Census of England and Wales, 1861,) up to the middle of the respective Census years. In 1866 the numbers have been estimated by adding the population enumerated in the islands in the British Seas in 1861, and the number of men in the Army, Navy, and Merchant Service abroad, (*see* Table 3. p. 81. Vol. III. Census 1861,) to the population for 1866 returned in the Table on p. lxx.]

Logarithms of the above Population of the United Kingdom.

* The *Registration Counties* consist of groups of entire Registration Districts; which Districts are, in general, identical with the Poor Law Unions. As the principle adopted has been to place a District or Union which extends into more than one County with the County in which either the principal town or the greater part of the population is located, the limits of the Registration Counties differ more or less from the boundaries of the Counties proper.

he Act of 6 and 7 Wm. IV. c. 86, in the Year ending December 31st, 1864.

† Where the parties to a marriage are of different religious persuasions it sometimes happens that the ceremony is performed according to the rites of both persuasions: in these cases the two ceremonies are entered as two marriages. This column also includes 22 cases of divorce, viz., 8 *divorced men* who married spinsters, 4 *divorced men* who married widows, 8 bachelors who married *divorced women*, and 2 widowers who married *divorced women*. For the districts in which these marriages took place see subsequent pages.

ABSTRACT OF MARRIAGES.—Marriages registered in England, pursuant to the

* In the other 62,947 cases the column of the Register headed "Age" is filled in by the Officiating Minister or by the Registrar of Marriages with the words "of full Age," "Minor," "Under Age," as the case may be; thus losing the additional means of identification afforded by a precise statement of the age of persons at the time of marriage.

Ages of 4,632 Bachelors and 4,632 Widows who intermarried in 1864.

* The *Registration Counties* consist of groups of entire Registration Districts; which Districts are, in general, identical with the Poor Law Unions. As the principle adopted has been to place a District or Union which extends into more than one County with the County in which either the principal town or the greater part of the population is located, the limits of the Registration Counties differ more or less from the boundaries of the Counties proper.

† Some of the births—especially of illegitimate children in London and large towns—escape registration.

* The *Districts* are collections of contiguous Parishes or Places combined for purposes connected with the Registration of Births, Deaths, and Marriages; and are generally identical with the Poor Law Unions of the same names. The Districts, 641 in number, are arranged according to their local position under the Registration Counties. The presence of Institutions in any District is indicated in this column of the Table by *H* for Hospital or Infirmary, *L* for Lunatic Asylum, and *w* for Workhouse situated out of the District to which it belongs; and repetitions of these letters show the number of such Institutions in any District. The smaller Institutions are not noticed.

† For a table of the Deaths in the principal *Public Institutions* situated in the Districts of London *see* pages 83–4.

‡ Wherever the minus sign is prefixed to the number in the column headed "Excess of Births over Deaths," it denotes that the Births in the District, instead of exceeding the Deaths, were, in fact, *less than the Deaths* to the extent stated.

* The Sub-districts are sub-divisions of the Districts, and comprise the Parishes or Places in which the Births and Deaths are registered by Registrars severally appointed for that purpose. The letter *W* denotes that the Sub-district contains within its limits a Workhouse belonging to the District or Union; *w* indicates that a Workhouse belonging to *another* District or Union is included; *H* indicates Hospital or Infirmary; and *L* Lunatic Asylum.

† For the number of Deaths in the Hospitals, Workhouses, and other principal Public Institutions in London, see pp. 83-4.

‡ Wherever the minus sign (−) is prefixed to the numbers given in the Column headed "Excess of Births over Deaths," it denotes that the Births in the Sub-district, instead of exceeding the Deaths, were, in fact, *less than the Deaths* to the extent stated. The Excess of *Deaths* over Births in several of the Sub-districts of London is attributable to the mortality in Hospitals.

I.—LONDON.—BIRTHS AND DEATHS, 1864—SUB-DISTRICTS—*continued.*

ENGLAND.—Supplementary Table of the

[The principles upon which the Causes of Death are tabled have been explained in previous Annual Reports. It will be sufficient to state now that all the Diseases, either having a distinct character, or fatal to any considerable number of persons, are classified under 114 heads; some of which, however, include groups of very distinct diseases,—such as are fatal to only a *few persons*, or *diseases* which are often confounded with other diseases. The rule has been to refer the distinct diseases to heads under which the cases were so numerous, that the additional numbers would not interfere with the calculated proportions. Where it is desired,

CAUSES of DEATH at different Periods of Life, in the Year 1864.

partial correction, however, can now be made by means of the following Supplementary Tables, containing many of the deaths from distinct diseases, such as mumps, epistaxis, dry gangrene, polypus, rickets, bronchocele, &c. &c., and deaths from other forms of disease, such as softening of the brain (necrencephalus), which are returned in many cases under other heads, as paralysis, &c.

These Tables are an extension of the Tables of Causes of Death in England, pp. 120–125.]

* NOTE.—In calculating the average annual rate of mortality from all causes in London, a correction has been made by distributing the deaths in *hospitals* proportionally over every district. The second rate of mortality (in figures of different character) is the result of a further correction,—in Chelsea and Greenwich for the Military and Naval Hospitals, in Wandsworth for the County Lunatic Asylum, and in the other London Districts for Workhouses situated out of the Districts to which they belong.

In all the other Districts of England the second rate of mortality is the result of a correction for either a Naval or Military Hospital or Camp, a County Lunatic Asylum or a Workhouse situated out of the District to which it belongs. The particulars of these corrections are given in the Supplement to the 25th Report, pp. xl-lviii.

Population 1861, Average Annual Rate of Mortality from All Causes in the Ten Years 1851-60, and Deaths from several Causes in the Year 1864, in the DISTRICTS of England—*continued.*

II.—SOUTH EASTERN COUNTIES—*continued.*

Tables 194–208

Letter to the Registrar General on the Causes of Death in England, by William Farr, Esq., M.D., F.R.S.

Year 1864.

Sir,

It has been shown in your Report that more people of all ages died in this year than in previous years. The rate of mortality was higher in infancy, higher in middle life, and much higher in old age, than the average.

The causes of death, as far as they have been recorded, are given in the Tables.

The excess in the rate of mortality is due in a great degree to the prevalence of scarlatina a disease of childhood; and to the fatality of bronchitis a disease of all ages. Scarlatina, by the activity of its zymotic elements, became epidemic among the increased numbers of susceptible children in unfavourable conditions; and the cold weather in the first and last months of the year induced bronchitis.

Of the total deaths 4478 were from causes not specified or ill defined; and 3321 were sudden and, generally, the subjects of inquests unsuccessful in ascertaining the causes. It must not be assumed that the causes of the remaining 487,732 deaths were all accurately determined.

It was shown for the year 1858 that in every 100 deaths 83 were certified by the medical attendant or the coroner, and that 17 were uncertified. In 6 of the 17 cases uncertified there was no medical attendant; that is, no qualified medical attendant; for the certificates of quacks, druggists, herbalists, and such like practitioners were rejected by Registrars in conformity with your instructions. In 11 of the 17 cases the cause of death was *not certified* for unassigned reasons. It was in Wales and in Yorkshire that the people were left to the greatest extent without medical advice. In London 97 per cent. of the deaths were certified, and only *one* per cent. of the deaths was returned as happening to a person left without medical advice. In a certain number of the uncertified cases, such as deaths by small-pox, the causes were, no doubt, correctly reported by the informant on the verbal statements of medical men, from whom certificates were not procured in time for registration.

There has been no essential change since in the character of the returns of the causes of death. They are subject to two kinds of imperfection, which it is necessary to distinguish.

The first is the consequence of the imperfection of medical science itself, and will only diminish as that science advances. And the second arises from the imperfect practical application of existing science: only a portion of the population has the advantage of consulting the most skilful physicians or surgeons of the day, who are conversant with the newest discoveries in physic; and in the remoter parts of Wales, as well as in some English counties, the medical man lives so remote as to be absolutely beyond the reach of large numbers of the people; many young children, many long afflicted men and women, many old people, die without being seen for weeks before death by a surgeon. Many men die of hernia, many women in childbed, who might be saved by surgical skill. Yet the medical attendance of the population is, I believe, better in England than it is in any other state of Europe; and the Poor Law does much to extend its advantages to the lowest classes. Where surgeons are not found in attendance on the sick they should be supplied in some way; and if this were done, science might well be employed to inquire into the causes of deaths which it had endeavoured to prevent.

To resume: thousands of deaths occur without any scientific inquiry into the cause of death; and in thousands of other cases medical science seeks in vain to unravel the mystery which enshrouds the extinction of life.

The coroner often simply returns "natural death." As one of the great ends of Government is the protection of life, the inquiry, however, in such cases is not without its use, as the negative finding of a jury is a satisfaction to the public mind, and suffices sometimes to relieve the innocent from suspicion. At the same time it often deters the tempted man from crimes which he feels are likely to be discovered.

In the earliest dawn of the nation the English inquired into the causes of death with a view to discovery and prevention. The protection of life was a fundamental principle of their laws. It was as much an object of their political organization as national defence or war. And the dead body, it was held, called for the coroner's inquest whenever death was sudden or violent or in prison; that is, whenever it was the result, or appeared to be the result, of any discoverable cause. The plagues of the sixteenth century proved that human life is exposed to invisible enemies, more deadly than the mechanical forces of nature, the ferocity of animals, or the malignity of manslayers; and towards the end of Queen Elizabeth's reign the London bills of mortality were commenced (1592). It was part of the general measures of her able government, by which abstracts of burials, baptisms, and marriages were directed to be compiled in each parish; and persons were appointed to view the bodies of all that died before they were suffered to be buried, and to certify of what probable disease each individual died, in statements of which it was the duty of the minister to make a weekly return. The deaths by plague and by all other diseases in the aggregate were published in the London bills so early as 1603; and in 1629 the several casualties were set forth weekly. Graunt gives a complete return for the year 1632 of the causes of 9535 deaths in London, whereof 8 were of the plague.* He says, that though not published, "the original entries in the *Hall-books* were as exact in the "very first year as to all particulars as now; and the specifying of "casualties and diseases was probably more."

Graunt thus describes the mechanism by which the observations in this remarkable series of Tables were collected:

"When any one dies, then, either by tolling or ringing of a bell, or by bespeaking of a grave of the *sexton*, the same is known to the *searchers*, corresponding with the said *sexton*.

"The *searchers* hereupon (who are ancient matrons sworn to their office) repair to the place where the dead corps lies, and *by view of the same*, and by other enquiries, they examine by what *disease* or *casualty* the corps died. Hereupon they make their report to the *parish clerk*, and he, every *Tuesday* night, carries in an accompt of all the *burials* and christenings happening that week to the Clerk of the Hall. On Wednesday the general accompt is made up and printed, and on Thursday published and dispersed to the several families who will pay four shillings *per annum* for it."

Graunt discusses the value of the bills, and shows what "corrections upon the, perhaps, ignorant and careless *searchers*' reports," were required; at the same time he says, as "many of the casualties were but matter of sense," the searchers reports might be sufficient in such cases. In many of the more intricate cases "the *searchers* are able to report the "opinion of the *physician* who was with the patient, as they receive the "same from the friends of the defunct;" and in very many cases, such as drowning, small-pox, dropsy, falling sickness, palsy, ague, rickets, their own senses were, in his opinion, sufficient.

Many of Graunt's judicious observations on the casualties of the bills are applicable to the reported casualties of the remotest parts of the country in the present day; for some districts still represent the ignorance

* Natural and political observations upon the London Bills of Mortality. By Capt. John Graunt, Fellow of the Royal Society. Tuesday, June 20, 1665. At a meeting of the Council of the Royal Society ordered to be printed. 5th ed. 1676.

of the cities of ages gone by. And Graunt was essentially right, for there can be no doubt of the value of even the imperfect reports of facts in the early bills directly concerning the life and death of Englishmen. They had on them in Graunt's book the approving stamp of the Royal Society. Sydenham, it is evident, had the London bills before him in writing his imperishable commentaries. Arbuthnot used them in an argument on Divine Providence and in the interests of morality.* Heberden in a masterly paper illustrated the use of the weekly observations, and deduced from them an important law.† Simpson and Price constructed life tables from the London bills.

The parish clerks of London deserve our gratitude for their perseverance in publishing the bills, which the citizens took in weekly for "no other reason" that Graunt could discover than curiosity about increase and decrease of burials or rare casualties, "so as they might take "the same as a text to talk upon in the next company;" and in the plague-time, "that so the rich might judge of the necessity of their "removal, and that tradesmen might conjecture what doings they were "like to have in their respective dealings." Similar bills were commenced in some other English and continental cities, but they were allowed to drop, leaving the series incomplete.

While medical science advanced, the weekly bills remained stationary; their interest was not kept up by eruptions of plague; Dissenters' burials were not included; and the clerks of many parishes made no returns, or only made them irregularly. And even when complete, the bills gave no information about the population of the towns and counties of the whole kingdom.

It was only in 1837, five years after the first epidemic of cholera, that under the Registration Act provision was made for the inquiry into the cause of nearly every person's death. The column of the schedule headed "Cause of Death" was introduced in the House of Lords. There has then since July 1st, 1837, been two kinds of inquests into the cause of death,—the Coroner's Inquest and your Inquiry.

The latter measure appears to have been looked upon as experimental. There was no view of the body, no arrangement for obtaining evidence, no machinery for instituting inquiry; and where there had been no medical attendant, or where the medical attendant refused to supply the information in his possession, no means of getting the required facts, except by making the medical man the legal informant. The imperfect information of the coroners was expressed in rude, vague, antiquated language, and was less satisfactory than that supplied from other sources. The heads of the medical profession supported the Registrar General's efforts to overcome the first difficulties; you circulated medical certificate books with a *Nosology* freely among the profession all over the country. You addressed coroners, and since the office has been strengthened by the Act authorizing the payment of medical witnesses, their information is much more valuable than it ever was before. The result is apparent in the returns of the present year. You succeeded in providing in medical men frequent substitutes for uninstructed jurymen and "ancient matrons sworn." Under the present administrative arrangements little further progress can be made.

It is notorious that the registration of the cause of death in its present form has contributed to bring crime to light, and has facilitated the conviction of the guilty. The trials of Palmer, Pritchard, and other

---

* An argument for Divine Providence taken from the constant regularity in the births of boths sexes. By Dr. John Arbuthnot, Trans. of Royal Society. Vol. xxvii. p. 186. He shows by the London bills that males always exceed females in the yearly births, but that external accidents make a great havoc among males. He concludes that "Polygamy is contrary to the law of nature and justice."

† See Influence of Cold upon Health. By W. Heberden, junior, M.D., Phil. Trans. 1796, p. 279.

criminals afford illustrations. Enough has been done since the passing of the Registration Act to establish the utility of general inquiry into the causes of all deaths, and to justify the employment of the machinery necessary to make the inquiry as complete as possible for accuracy of record, for protection of life, and for the furtherance of medical science.

It will be borne in mind that the coroner and his jury can only conduct the inquiry on view of the body (super visum corporis); by the first statute (4 Ed. 1. stat. 2. A.D. 1276) it is enacted, that on being commanded by the King's bailiff or other honest men of the country the coroner of our Lord the King "*shall go to the* PLACES *where any be slain*, "*or suddenly dead or wounded* * * * and shall forthwith command "four of the next towns, or five or six, to appear before him in such a "place." The coroner inquired upon oath, and his information was based upon actual examination of the body, the place, and the surrounding persons. The searchers of the London bills were also instructed "to "repair to *the place where* the dead corps lies, and *by view of the same*, "and by other inquiries, to examine by what disease or casualty death "was caused." The registry of burial in the Established Church is a public act; the coffin and several witnesses are before the clerical registrar; but the identification of the body in the place of death is lost. And in a large city anybody may be buried under any name. By the Code Napoleon the Registrar is bound to *see the body*, and to register the death on the information of two men of full age (21), and without his certificate the body cannot be interred. (Code Civil, Livre 1. tit. 1. s. 77.)

77. "Aucune inhumation ne sera faite sans une autorisation, sur papier libre et sans frais, de l'officier de l'état civil, qui ne pourra la délivrer qu'après s'être transporté auprès de la personne décédée, pour s'assurer du décès, et que vingt-quatre heures après le décès, hors les cas prévus par les règlemens de police." See also s. 37.

Should any signs of death by violence be discovered, or any suspicions be aroused, the body can only be buried after the circumstances of the death have been inquired into and reported on by a police officer, aided by a physician or surgeon. (s. 81.)

This is the spirit of the registration law on the continent. The inspector of the dead in Austria is called *Todbeschauer*. In Brussels notice of every death is sent to the Town Hall, with the address, and a medical inspector inquires into the circumstances and registers every death.†

In England under the Act 6 & 7 Will. 4. c. 86. death registration is a simpler process. A person *present* at the death, or *in attendance during the last illness*, of the deceased person, goes to or sends for the registrar of the district in which the death happens, gives the requisite information,‡ and signs the register book as the informant either in writing or by mark. The qualification implies that the informant has seen the deceased person alive during the last illness, but beyond that there is no restriction in the act as to capacity, character, sex, or age.

The table in next page shows the sex and qualification of informants in certain districts.

The informant and the registrar are usually alone during the act of registration; no witness is required; and, if present, no witness is allowed

---

† Early one morning, after the annual fêtes in which the Belgians so much delight, I accompanied Dr. Verstraten on his pilgrimage to the chambers of the dead scattered over the city, and it was a very striking and varied spectacle. At one hour we stood in the midst of lights and incense by the body of a lady of rank, at another in a wretched attic by the corpse of a father of a family of sleeping children, and finally, after traversing many streets, finished our course at the Lying-in-Hospital. He inquired into the circumstances and causes of every death.

‡ In default of the qualified informants as above described, it is incumbent on the *occupier of the house* to give information, upon being requested so to do by the Registrar. Of the occcupier's death an inmate may be the informant.

to sign the book.* If the persons qualified to give information do not come to the Registrar, he is directed to go to the house where the death occurred, "or *wherever* such person *qualified* to give information can "be found, and ask for it." When found, informants "by refusal to "give information, and to sign the register books, render themselves "liable to be indicted for a misdemeanor." The inducement to take the initiative turns on the use of the Registrar's certificate, which given after registration is authority for the burial of the body. Any person burying a dead body without the certificate of the Registrar or the Coroner, and neglecting to give notice of the burial within seven days, incurs a penalty not exceeding 10*l.* for every such offence.†

Registration is thus performed without any expense to the parties, and with as little trouble and expense to the public as possible. Copies of the entries in the register books made by the Registrars, and verified by the Superintendant Registrars, are sent every three months to the General Register Office, where they serve for statistical and other important purposes. A certified copy of an entry, sealed at the General Register Office,‡ says the Act, shall be received as evidence of the death to which the same relates, without any further or other proof of such entry.

Now it is reported § that in the case of Leach v. Leach the Vice Chancellor observed, that he could not be satisfied with the sealed certicate; "all the registry proved," he is made to say, "was this, that some "one called at a particular house, and was told by some one that a man "named so-and-so was dead. Although such evidence was parliamentary "he did not consider it sufficient here." Commenting upon the case in which Fletcher during her life registered the death of a lady of the name of Slack, and with the help of the Registrar's certificate and a forged will took consols to the amount of 5,000*l.* from the Bank of England, the *Times* thus criticized the act: "The Registrar receives in-"formation of the death at his office; he does not go to the house and "scene of death. He is thus necessarily liable, more than could have "been the case before, to impostures. A party calls at his office, gives "information of the death, and receives the certificate."

The Vice Chancellor can scarcely be correctly reported; for the Act distinctly states that the register is invalid unless the informant has

‡ Section XXXVIII. § *Times*, March 6th, 1844.

signed in it his name, description, and place of abode,* thereby rendering himself subject to the pains and penalties of perjury if he has wilfully made any false statement touching any of the particulars to be registered.† And Fletcher not only got a false certificate, but procured probate of a forged will.

It must, however, be admitted that in a large city the Registrar sitting in his office has no means, or very imperfect means, of knowing and identifying informants, or of verifying the accuracy of the various particulars which he enters on the national registers. The Bank of England refuses to accept the death certificate as a proof of death.

The Registrars, appointed generally by Boards of Guardians, before their appointment is confirmed by you, answer questions in writing, and their competency is proved by their copies sent to the office, and by the state of their registers which are periodically examined by Inspectors. The Registrars are a highly respectable body of men of all the various classes of society, and as they are only paid small fees they are necessarily engaged in other professions, in trades, or in some branch or other of industry. The work requires integrity, accuracy, sound sense, good writing, and close attention to all the minute provisions of the Act and of the regulations. The clerical part of their duty is checked by the Inspectors, by the Superintendents, and by the central Record department; but there is at present no means of checking the registered facts, or of determining the degree of accuracy with which informants report and Registrars record the particulars of each entry. Where the informant is educated and interested, he naturally reads before signing the entry, and thus to some extent checks the work. Unfortunately it happens that in a large proportion of cases the Informants sign by a mark, and as they cannot write their names they cannot read the record which they sign alone in the presence of the Registrar. They cannot check the record. This has given occasion to cases of fraud which could scarcely have been anticipated. In the course of twenty-nine years, out of a body of 2200 officers, four, for the sake of the shilling an entry, inserted long series of fictitious entries of deaths which never occurred. They invented all the particulars of hundreds of deaths. The first case was that of a Registrar of All Souls, Marylebone, who died before the discovery; he served under a most acute Superintendent Registrar. The second case was that of a Registrar of Howard-street Sub-district, Liverpool, of respectable connexions, who for fictitious entries was dismissed, convicted of felony, and sentenced to six months imprisonment with hard labour. These two cases, and another at South Shields, are referred to in your Reports,‡ and the required corrections are made in the calculations of the mortality of Marylebone, of South Shields, and of Liverpool. This offence, it may be mentioned, was first distinctly defined in the Forgery Act of 1861 (24th & 25th Victoria), under which the wilful insertion of any "false entry of any matter relating to any death" renders the offender liable, on conviction, to penal servitude for life (s. 36.); yet a Registrar of Howden, who began registering fictitious entries about ten years ago, continued the practice up to a recent date under the eye of his Superintendent, and subject to the periodical visitation of intelligent Inspectors. The causes of death were copied, with slight variations, from medical certificates, and his imaginary informants were represented as signing with marks. This a man of ordinary capacity dared and was able to do, because while there is a check on the handwriting and the form of entry, there is no check whatever on the accuracy of record, or on the veracity of informants. The facility of signing with marks of single informants tempted four men into the commission of these extraordinary crimes for the sake of small sums of money. For money the same

‡ See Report IX. pp. 177 and 238–9. Report XIII. p. 294.

criminals might, it is to be feared, with the hope of impunity before them, have falsified the record of important facts affecting vast amounts of property in insurances and successions. Fictitious entries embarrass statistical inquirers, and they were first brought to light in this office by the exorbitancy of the results. The Howden fraud was kept within narrower limits; it was discovered through the clergyman of a parish where the mortality was exaggerated.

It is deplorable that a single case of fictitious entry by a Registrar, or of deliberate fraud by informants, should have occurred during twenty-seven years; but it must be borne in mind that few Registrars among many thousands, and few informants among many millions exposed to temptation, have criminally falsified the public records. The wilful falsifications are insignificant in number in comparison with the errors in 11,011,291 entries on the death registers.

I have referred to such defects of registration as vitiate the evidence that the registers afford affecting property, and the use of the records for scientific induction. I have now to refer to the imperfect security afforded by incomplete as compared with complete registration against murder and attempts on life. The following death was thus registered:—

"Died 11th June 1848 at Wix (Manningtree) William Constable, aged "38 years, labourer, decline (3 months). *Not certified.*

"× The mark of Mary Faint, present at the death, Wix."

This was one of the Essex poisonings. The man, it was afterwards discovered, was poisoned with arsenic by his half-sister Mary May, aged 28. She was tried at Chelmsford, found guilty, and executed.

The facility of registration in this easy way does not discourage the criminals. They go on with greater confidence. And this was only the first discovered case of a series of similar murders of husbands and children by wives and others, who could make their marks and administer arsenic in the Essex villages of Wix, Bradfield, Ramsay, Dovercourt, Tendring, Thorpe, Kirby, Mistley, Great Oakley, and Great Holland.* Sir James Graham, in the House of Commons, in June 1846, referring to another series—the Norfolk poisonings,—said: "There was reason to believe "that in the county of Norfolk no fewer than twenty persons had died "from poison administered by one individual, and in none of these cases "had an inquest been held." I may cite other instances.† One murder successfully registered without detection led to the commission of more murders, and murder became epidemic by imitation. It is probable that the number of such cases was exaggerated, but the terror they inspire is in itself an evil, and by crimes of the kind the country is dishonoured in the eyes of the world.

These deaths occurred in country villages among ignorant people. but in towns the detection of crime is rendered in certain cases much more difficult than it is in the country. The body can be buried in any churchyard or cemetery without a Registrar's certificate; and the clergyman or burying officer, though bound to give the Registrar notice (which he sometimes forgets), can only give such particulars as the parties conducting the funeral supply. The notice, if written, may be addressed to the wrong Registrar, or be so vague or perhaps erroneous that the Registrar of a large district, like Islington in London, cannot find the house in which the death occurred. Bodies are sometimes removed

* These cases are well described in the letter of a barrister in the Morning Chronicle, April 11th, 1849.

† In one case it happened that Mr. Hitchins, who was coroner for Kesteven and Parts of Lindsey, was also a Registrar of Deaths in Lincoln. He assigned the following reasons for wishing to retain the latter office:—"My object in desiring to retain office is "not for the emolument, but because I have found it to assist me essentially in my office "of coroner. By its means of information three murderers, and one for manslaughter, "have been transported; and at the present time two murderers, and one for manslaughter, "are for trial at the next assizes, from being unable to obtain certificates."—*Letter dated Lincoln, 3d February* 1849. The murderers in another district might have escaped, as the deaths might have been registered without a certificate.

unregistered to other districts for burial, and all traces of them are lost. As still-born children are not registered at all, and are buried with little difficulty, there is a great temptation to inter the bodies of children living only a short time as still-born. This opens another gate to crime.

By forbidding, as in France, the burial of any body without the Registrar's certificate, the latter class of evils will be obviated; and although inconvenience must occasionally arise from the absolute prohibition of the burial of the uncertified dead, that inconvenience should be encountered for the sake of many compensating advantages.

There is another defect in the Act: some old women and men, like hermits of old, live in solitary dwellings; in their last illness terminating suddenly they may have no person in attendance, and no witness present at their death. In these cases there is no legally qualified informant, and the deaths are not registered; the causes of death remain for ever unknown. The coroners are now paid by fixed salaries, and in many cases of violent deaths they do not hold inquests, unless they are led to suspect crime. This saves the county expense, but it has resulted in the absolute non-registration of deaths.*

Such are some of the defects by which the registration of the causes of death, and of the fact of death itself, is rendered less useful than it might be made for the purposes of science, for sanitary administration, for evidence affecting successions of property, and for the protection of life. To remedy these defects, amendments of the Act are required; families must take more trouble to find qualified informants, and the country must consent to pay the necessary expenses of fuller inquiry.

It is now sufficient to send to the register office one informant, such as a nurse, and although a medical certificate is asked for, it is not indispensable by law, and is often not produced. That is all the trouble families are put to in registering their dead; and the Registrar gets *a shilling* from the poor rate for recording, and making copies of the entry to be transmitted to the central office. The Superintendent Registrar gets 2*d.* for examining the copy of the entry with the original entry. Each death costs the country *twenty pence* for registration, including pay of officers, cost of books, ink, copying, custody of records (which it is expected will last for centuries), indexing, analysing statistically, and administration.

The inquiry into the cause of death might be made sufficient for all its great and useful purposes by a simple extension of the system of medical certificates which you introduced, and which has for many years been in partial use. And as I am not disposed, in imitation of foreign practice, to relinquish the principle of confidence in the medical attendants on families, I submit that having been in attendance up to the date of death, their certificates should still be received, provided they *have seen the deceased on the day of death, or have seen the body subsequently for identification.* It would be undesirable to enforce the grant of the certificate by any penalty; and under this arrangement the medical attendant should charge the family a fee in proportion to his ordinary

---

* I subjoin an illustrative case:—

(Copy.)

Superintendent Registrar's District, Chepstow,
Registrar's District, Lydney,
May 17th, 1866.

Sir,

On Tuesday last, the 15th day of May, a lad named George Morgan, aged 16 years, accidentally fell into Lydney Basin and was drowned; he was never seen alive after falling into the water. The serjeant of police informed the coroner for the district of the accident, and the coroner informed the police there would not be any occasion for an inquest in such a case, as there was not any doubt as to how the lad came by his death. I should be glad to be informed of the proper way for me to make the entry in the Register Book of Deaths, and also as to the party to be the informant.

I remain, Sir,
Your obedient servant,
WILLIAM PACKER, Registrar,
Lydney District.

To
The Registrar General.

charges. For pauper patients the Poor Law medical officer should be entitled for the certificate of death to a fee fixed by the Commissioners.

Under these circumstances many deaths which are now "certified" would be "uncertified" by medical attendants, as the friends of out-patients of hospitals and dispensaries, as well as others, often get certificates to which they are not entitled through the kindness of the medical officers, who have sometimes no means of identification or verification. In all such cases, and in every case of death without medical attendance up to the date of death in which the certificate could not be obtained from a legally qualified medical attendant,—an informant, or the occupier of the house, or in his default an inmate, should be bound to give notice to a medical officer specially appointed for the duty in each of the districts of the kingdom. This *registration medical officer* would thereupon visit the body, and if all was clear, and admitted of satisfactory determination, send his medical certificate of the probable cause of death by the informant or by post to the Registrar, who would upon its receipt register the death, and issue his certificate for burial in the usual course. The *registration medical officer* would, if the case was enveloped in any suspicion or obscurity, refuse his certificate until an inquest had been held or refused by the Coroner, whose inquiry should by no means be superseded. The *registration medical officer* should be specially qualified to conduct *post mortem* examination, and, on being summoned, might appear as the medical witness at the Inquest. By practice he would acquire aptitude in the investigation of the obscurer causes of death, and in the detection of crime. Under this system every death, and the cause of every death, would be certified; and poisonings and criminal attempts on the life of children or adults would be less frequent, as they would with difficulty escape detection. Expected impunity would not invite men or women into the commission of fearful crimes. And human life would be under a new safeguard.

It is necessary to alter slightly on the above plan the present form of medical certificate, and three specimens of the requisite altered forms are subjoined. If the still-born deaths are to be certified, a special form would be required.

To the Registrar of the Sub-District in which the Death took place.

I hereby certify that I attended John Jones, carpenter, *aged* 21 years *last birthday; that I* saw him alive on January 11th, 1866; *that he died* on that day at 7, King-street, Marylebone; *and that the cause of his death was*—

	Cause of Death. (*In case of Autopsy write P.M.*)	*Time from Attack till Death.*
(*a*) First.	Typhus	19 days.*
(*b*) Second.	Pneumonia, P.M.	3 days.*

Date, January 13th, 1866.

* Each form of Disease, or Symptom, is reckoned from its commencement *till* Death.

N.B.—This Certificate is intended solely for the use of the Registrar, to whom it should be delivered by the person giving information to him of the particulars required by law to be registered concerning the Death.

Note.—(1) The Certificate of Death should be procured from the Medical Attendant who has either seen the deceased on the day of death or has afterwards seen the body. In the absence of such Certificate the body must be inspected and the Certificate be given by the Registration Medical Officer of the District or by the Coroner.

(2) The Registrar will in all cases register the name of the Medical man who signs the Certificate.

(3) No death can be registered and no burial take place until the death is certified.

The persons who are qualified to act as Informants, and to sign the Register as such, are—

(1) Some relative or other person *present at the death.*

(2) Some person *in attendance* during the last illness of the deceased;
Or, in case of the death, illness, inability, or default of all such persons,

(3) The *occupier* of the house or premises;
Or, if the occupier be the person who shall have died,

(4) Some *inmate* of the house in which the death shall have happened.

To the Registrar of the Sub-District in which the Death took place.

I hereby certify that I attended Jonathan Williams, aged 32 years *last birthday; that I* saw his body on January 26th, 1866; *that he died* on January 24th at 211, Oxford-street; *and that the cause of his death was—*

	Cause of Death. (*In case of Autopsy write P.M.*)	*Time from Attack till Death.*
(*a*) First.	Small-pox (confluent) (first attack)	21 days.
(*b*) Second.	Not vaccinated

The Registrar invariably to write "certified by" in his Register Book, adding the name and title, and if out of the district the address of the medical attendant or of the registration medical officer, as the case may be. The Registrar to file the certificates, and to produce them for examination with the certified copies by the Superintendent Registrar, who would certify the accuracy of the copied entry of the cause of death.

It would increase the value of the evidence if the certifying physician himself signed the entry in the register. But this would be a complication; it would increase the expense, give much trouble, and produce delay, so that I do not propose it. It was tried in the case of the coroners, and failed.

The advantages of the proposed amendments may be briefly enumerated:

(1.) The *cause of death* would in all cases be certified by one professional witness, and would be recorded as correctly as is practicable in the present state of science.

(2.) The fact that a given person died at a given place would be attested by the informant as at present, and the evidence would be enormously strengthened by an educated witness. While so large a portion of our informants cannot even write their names, this is of great importance.

(3.) Secret murders and attempts on life, and deaths of children, or of old people, from neglect, could rarely escape detection; they would, other things being equal, be less frequent than they have been in past times. Life would become more secure. The public solicitude, like a Providence watching over all, would cherish the reverence of all classes for human life.

(4.) The frauds of informants would be less common, and no Registrar would again manufacture fictitious entries, thereby throwing discredit on the whole of the *national registers.*

(5.) Much trouble would be saved to the public, who are now put to expense in getting corroborative certificates, as it is felt that the present

certified copy of an entry is most imperfect evidence of the death and identity of deceased persons.*

(6.) The registration medical officer visiting the dwellings of people in unfavourable sanitary conditions would discover and point out the consequences of those conditions to the families themselves, and to the authorities in seasons of cholera, of fever, or other epidemics. The authorities would find it convenient to make him the health officer of the district; and often where such an officer already exists, he might discharge the medical registration duties. The Post Office would employ the registration medical officer in insurance business, and so would insurance offices, to whom he could render essential service in putting a stop to the numerous frauds which are every day committed at their expense.

You have appointed two *Inspectors* with great advantage, as they instruct Registrars, and inspect the books on the spot in periodical visits. But they proceed no further than the books; and, unless the books themselves supply evidence of inaccuracy, no inaccuracy is discovered. They do not institute any comparison between the actual or the ascertainable facts and the records of those facts. Here many errors must occur. At this office no important work is allowed to pass unchecked; and after selecting the clearest headed men, the calculations are all made in duplicate, and carefully compared. Experience has shown that this is necessary to ensure accuracy. It provides against errors of human fallibility, and errors of negligence. Now the registration records need not be made in duplicate by two separate officers and compared; but by periodical inquiries into the actual facts of *cases where the informants sign with marks* every Registrar would work under a sense of responsibility, and would do his work better than he does it now. I beg to suggest that you should be allowed to appoint an Inspector to be especially employed on this duty, with a Medical Inspector to be especially employed in looking after the registration of the causes of death in such districts as you might be pleased to direct.

Medical men have to learn the difficult duty of returning fatal diseases on a uniform system and under the same names. Their attention might be called in a friendly way to any imperfections in their returns. This is found to work well in Geneva, where it was performed for many years by my friend Dr. Marc d'Espine with the best possible result, both in the interests of science and of justice.

This improvement in our system of registration would be quite in accordance with English habits, which must ever be religiously respected in a matter so solemn as death. The public medical officer would

---

* The following letter supplies an illustration of the expense and trouble to the public to which imperfections of registration give rise :—

Sir, Astwood Bank, Bromsgrove, May 22d, 1866.

A sum of money is invested in the 3 per cents. in the names of trustees. The survivor wishes to effect a transfer. The directors of the Bank of England refuse to receive any certificate but that of burial. These have been forwarded, but now returned with a printed form of declaration to be made before a magistrate that these certificates have been compared with the register book of the cemeteries, and are found a true and faithful copy. This must be done by some one who personally knew the deceased.

This will occasion us considerable *trouble and expense* as we shall have to send a person a long distance. I always understood a certified copy of the register of death bearing the seal of the office was to be received in law without any further proof.

* * * * * *

(Signed) John Phillips, Baptist Minister.

To mention a case of fraud :—In November 1844 Elizabeth Mason, married, residing at Walsall, registered the pretended death of her brother, John Hodson, and by means of the certified copy of the register obtained from the executors of one Drinkwater payment of a legacy which, by his will, he had bequeathed to John Hodson on his attaining 21, and to the said Elizabeth Mason in the event of *Hodson dying under that age.* In February 1848 Hodson appeared and claimed the legacy which had been received by Elizabeth Mason. She was tried and convicted at Stafford Lent Assizes, 1848.

only intervene when the family had no physician in attendance, and wherever he attended it would be confidentially, for the comfort and satisfaction alike of friends and of the community.

This system, I submit, would be more efficacious than the registration now in use in France, where the death can be registered by declaration, without assigning the cause of death. The inspection of the body by the *Officier de l'état civil* would be superseded by the certificate of the medical attendant, or of the registration medical officer; the inquiry into the cause of death would be universal; and the evidence of the certificate of registry would be valid. The French explicitly reject women as informants,* and thus must in many cases forego the best possible testimony. Women are as truthful as men; and their evidence is as trustworthy where they have equal opportunities for the observation of facts within the scope of their knowledge.† Women are almost always, except on the field of battle, in attendance or present at death. The wife does not forsake the husband, the mother the child, in the last moments. In marriage and in birth, the two great acts of registration, the woman is indissolubly associated with the other sex, and from men in death they are not divided. On what ground then is the woman rejected peremptorily as a witness? The French principle is inapplicable to English women. But in England we may well avoid rushing to the other extreme. Why should a majority of the informants of some districts be ignorant women, who sign the registers with marks, and cannot read and check the entry to which their signature is attached in the national records?‡ The medical certificate is indispensable under such circumstances.

The improvements in registration cannot be carried out without expense. The medical certificate will cost the public from *a florin* to *a guinea* an entry; only the portion of the pay for the registration medical officer and for inspectors will come out of poor rate and out of consolidated fund. It is desirable to make the fee of the registration officer

---

* Code Civil, livre 1. sec. 37.: Les témoins produits aux actes de l'état civil ne pourront être que du sexe masculin agés de vingt-un au moins et ils seront choisis par les personnes interessées.

† Criminal returns of England 1864. The number of men committed for *forging* and *uttering forged* instruments was 140, of women 4; for uttering and having in possession counterfeit coin 330 men, 98 women, were committed in the same year.

‡ Number and Proportions per Cent. of Persons who were Informants of Deaths, and of Persons married, who signed the Register with Marks in eleven Districts or Sub-districts of England and Wales in a portion of the Year 1864.

	Informants at Death (exclusive of Coroners and Informants in Institutions).			Persons married.		
	Total Number of Deaths.	Informants signing with Marks.	Proportion per Cent. signing with Marks.	Total Number.	Number signing with Marks.	Proportion per Cent. signing with Marks.
Persons - - -	3,196	1,537	48	10,864	2,902	27
Males - - -	1,208	312	26	5,432	1,142	21
Females - -	1,988	1,225	62	5,432	1,760	32

The facts are compiled from the Registers of the districts of Chelsea, Reading, Peterborough, Romford, Highworth, Rugby, Derby, Halifax, Durham, and Carnarvon, and the sub-district of St. Martin Liverpool.

Of 100 informants 38 were males and 62 were females.

Note.—Exclusive of coroners and informants of institutions, of 1217 informants at death in the county of Northampton 181 were men of whom 52 signed with marks, and 1036 were women of whom 784 signed with marks. Of 1843 persons married 447 men and 499 women signed with marks, or of 100 *informants at death* 69 *signed with marks*, and of 100 persons married 26 *signed with marks*. The ignorance of the informants at death was to the ignorance of the ordinary run of people marrying in Northamptonshire as 69 to 26. Of 100 informants 15 were males and 85 were females.

sufficiently high to command the services of a good class of the profession; and the tariff must, therefore, necessarily vary in country and town districts with the distances to be travelled, and the variable local medical charges. The fixing of the fee might be left to you, subject to the approval of the Treasury. The cost of registration medical officers and of inspectors would not exceed in the aggregate 50,000*l.**

If we compare this sum, and the value of the services for which it is to be paid, with the cost of inquests and the cost of funerals, it does not appear to be great or extravagant.

The cost of registering the particulars and the causes of the deaths of the 495,531 persons who died in England and Wales was about 41,350*l.* in the year 1864; in 1867 under the improved plan it would be about 91,350*l.*† Instead of 20*d.* it would be about 44*d.* on each death. This sum would be amply recouped in the additional security to life and property. It is computed from the legacy duty returns on 495,531 deaths that about 93,500,000*l.* passes by death to successors. On this sum 92,000*l.* is less than a farthing in the 1*l.* (See Registrar-General's 22d Report, p. 1.)

The coroners of counties and boroughs held inquests on 24,787 bodies at a total cost, including coroners' salaries, travelling expenses, and medical witnesses, of 72,598*l.* This sum is paid out of the rates. It amounts on an average to 2*l.* 18*s.* 7*d.* on each inquest. The jurymen are not paid for their services, but they are summoned, and if they do not attend render themselves liable to a penalty. The value of their time cannot be estimated at less than 25*s.* 5*d.* This will make the cost of an inquest 4 guineas, or 24,787 inquests cost 104,105*l.* in the year. The value of this ancient institution cannot be questioned, but the inconvenience and cost to families left out of account in this estimate is not inconsiderable.

If the inquiry by inquest had been extended to the whole of the deaths, the cost in coroners and in medical witnesses only in the year 1864 would have amounted to 1,451,345*l.*, without allowing anything for the time lost by jurymen, and for the inconvenience of families.

The cost of 66,748 funerals in the metropolis was estimated by Mr. Chadwick ‡ for the year 1839 at 626,604*l.*; and his "proximate "estimate of the expense for the total number of funerals in England "and Wales," was 4,871,493*l.* He shows that the expense of pauper funerals in London was 13*s.*, of artizans 5*l.*, tradesmen of second class, &c., 27*l.* 10*s.*, tradesmen of 1st class 50*l.*, gentry and the higher classes of people 100*l.*; while the expenditure on the funerals of children under 10 years of age of the corresponding classes, excluding paupers, ranged from 30*s.* to 30*l.* The average cost of funerals of persons of every rank above paupers in London he takes at 14*l.* 19*s.* 9*d.*, and including paupers at rather less than 10*l.* I am aware that the cost of funerals of persons of rank runs up to 1,000*l.* or 1,500*l.*, and that workmen's clubs pay commonly 10*l.* for burial, but I am disposed to think that Mr. Chadwick's estimate is too high for the whole population, in town and country. Instead of his figures I take the average cost at 6*l.*, and then the amount that the nation expends annually on the burial of its dead is 2,973,186*l.* This includes only expenses that figure in undertakers' bills. It neither comprises the extra cost of mourning, nor the expenditure in memory of

---

* Take the annual deaths at 500,000, and the uncertified cases in the proportions above given as 17 per cent., then 85,000 cases would be visited annually. The cases would be almost exclusively in the poorer classes, and at 10*s.* each the cost would be 42,500*l.*

† I have not brought into account the cost of the apartments in which the records are kept at Somerset House. The conservation of inaccurate documents, it is worthy of note, is as costly as the custody of the most authentic records; and the State in the former case is in the condition of a bird wasting its care on addle eggs.

‡ Supplementary Report on the Results of a Special Inquiry into the Practice of Interment in Towns, by Edwin Chadwick, Esq., pp. 70–1.

the dead on monuments, or friable stones, which will be obliterated or crumbled into dust long ere the national lists of the dead in the custody of the State have perished.*

It is well to attach solemnity to funerals, but no one can doubt that it would be wiser on the part of the nation to give a florin or a guinea as a fee to a registration medical officer for the benefit of the living and of generations to come than to squander guineas lavishly on stones, or on lids of feathers, rich silk bands, porters, pages, feathermen,† and mutes.

---

* The expense of an inscription on a common tombstone has been estimated by Mr. Wyatt, the Superintendent Registrar of Islington, as below. It far exceeds the cost of the most efficient and authentic registration of all the essential dates and facts of a man's birth, marriage, and death.

Sacred to the memory of William Matthews of this parish, died 25th December 1865, in the 72nd year of his age. 84 letters at 3*d.* each = 1*l.* 1*s.*

I think it will be about the average to take 3*d.* per letter for engraving and painting on tombstones, as it is sometimes done as low as 10*s.* per 100 letters, if the tombstone has been erected by the same mason. The engraving on marble or granite is very expensive.

As one stone may record the deaths of four or five persons, I consider it would be a fair estimate to set down :—

For tombstone -	- 1*l.* 1*s.*	for each person.
„ engraving same	- 1*l.* 1*s.*	
	2*l.* 2*s.*	G. Wyatt.

Gravestones endure a very variable time ; Sir Thomas Brown (Urn Burial) sets down the time they stand at 40 years. There are paper registers in this office dating from 1567 in excellent condition. I annex two extracts from the register of French Protestants at Southampton.

Extracts translated by Mr. Shoveller from the register of the French church at Southampton, now in the custody of the Registrar General:

James de Cean de Valencienne was buried on the 26th of November 1567.

Phelippe de St. Legrer from France was buried in the said place, outside the church, the 21st day of January one thousand five hundred and sixty-nine.

Bernard Matien, a lad, native of Bordeaux in France, and abandoned by his father (and through poverty) at the house of William Hersens, died the 10th day of April 1573, and was buried in the evening of the same day.

In the same register is recorded (25th September 1572) a fast on account both of the persecutions by the Duke of Alva in the Netherlands, and the massacre on St. Bartholomew's day (24th August 1572). On the occasion of her visit to Southampton, 4th September 1591, these persecuted Protestants heard from Queen Elizabeth consolatory words, which they record with gratitude.

Mr. Rickman made a special inquiry into the parish registers existing at the date of the Census A.D. 1831.‡ The result of this inquiry is thus stated : "No person will be sur-" prised that one half of the registers anterior to A.D. 1600 should have disappeared. If " any other nation possesses similar registers of that date (a valuable proof of uninter-" rupted civilization), a comparison might be instituted, and the preservation of such " records through three hundred years would not prove to have been of frequent occur-" rence ; but in point of fact examination shows that 812 English parish registers " commence in the year 1538, about 40 of which contain entries (copied probably from " family bibles and tombstones) anterior to the date of Cromwell's injunction ; 1822 " parish registers commence from A.D. 1538 to 1558, when Queen Elizabeth required a " protestation from the clergy ; 2448 parish registers commence from A.D. 1558 to 1603, " when the canons authorized by King James directed a copy of all extant parish registers " to be made and preserved, and nearly one half of them (5082) have been preserved " accordingly, and are now extant. Parish registers, to the number of 969, commence " between that time to the year 1650 ; 2757 from A.D. 1650 to 1700. 1476 parish " registers from A.D. 1700 to the year 1750 ; the rest (six or seven hundred) since that " time."

How many tombstones of these earlier dates existed in the churchyards when Mr. Rickman wrote ?

Without these registers, some of the dates of the birth, marriage, and death of some of the greatest men the country has produced—Shakespeare for instance—could not be determined.

† See examples of ordinary undertakers bills in Mr. Chadwick's Report to Sir James Graham, Her Majesty's Principal Secretary of State for the Home Department. 1843. pp. 287–9.

---

‡ Population of Great Britain 1831. Preface to Enumeration Abstract, vol. I., p. xxix.

The registration medical officer would stand in nearly the same relation to you, who direct the inquiry into the cause of death for the purposes of registration, as the medical witness stands (under 6 & 7 Will. 4. c. 89.) to the coroner, but it might be desirable to leave his first appointment and pay to the same bodies as appoint the Registrars and Superintendent Registrars, subject to your approval, and to such rules as you may lay down as to qualification.

Sir, I submit these considerations to you with confidence, as it will be admitted generally that you have administered the present Registration Act so as to make it in its imperfect state useful as regards public health, as regards life, as regards the science of insurance, and as regards the collection of evidence affecting the transmission of names, titles, and property to successive generations. Far from justifying inaction, it is a ground for further improvement. Your great experience will give Her Majesty's Government confidence in any useful measure you suggest for rendering the national records worthy of England, and I know that it will be a satisfaction to you not only to have administered but to have perfected the law.

Satisfaction in good work was pronounced by the inventor of the word "statistics" to be characteristic of the English workman,* and I trust that I may without presumption say that while the department of which you are the chief shares the feeling, it is anxious to deserve Achenwall's praise of the English workman.

The following is an analysis of the particulars of which evidence is found in the death registers. I take the example given in the schedule :

1. That a person is dead.
2. That the name of that person is —*William Green.*
3. That the said person died at a certain date,—*at* 5 *o'clock,* 4*th February* 1865.
4. That the said person died in a certain place,—31 *Strand, London.*
5. That the said person was by profession—*a carpenter.*

Note.—All these particulars are recorded on the evidence of the informant, who, if he has witnessed the death, bears direct testimony to particulars 1, 3, 4; the testimony as to 2 and 5 may be direct or indirect. If he was merely in attendance, and has not seen the body all the evidence is indirect. He gets it at second hand.

6. That the said person was a male or a female—*Male.*
7. That the said person was of the age—43.

Of the *sex* and *age* the evidence is always indirect; it would be strengthened, as would all the other evidence, by the production of the certificate of birth at the time of the registry of death.

8. That the *cause of death* of said person was—*small pox.*

Note.—Sometimes the cause of death is easily distinguished by unskilled observers; in others it can be discovered after death by a skilful inspector from the testimony of surrounding persons; in others it can only be distinguished by medical men who have observed the symptoms during life. In many obscure cases inspection of internal organs (autopsy) and chemical analysis are required to enable the medical expert to divine the cause of death. In some cases, particularly of infants and old people, the cause of death cannot be discovered in the present state of medical science.

---

* The Englishman is the best workman in the world, for he works so as to satisfy his own mind, and always gives his work that degree of perfection which he has once learnt to appreciate and attain; and as the Frenchman seeks to enhance the value of his manufactures by all kinds of external ornament, so the Englishman seeks to give his productions in exactitude, usefulness, and durability a less fleeting worth.†

---

† Statsverfassung der heutigen vornehmsten Europäischen Reiche und Völker im Grundrisse von Gottfried Achenwall Weyland Hofrath und Professor der Rechte und der Politik zu Göttingen. 1781. (p. 324.)

9. That the signature, description, and residence of informant was—*Rebecca Green, Widow,* 17 *North Street, Marylebone.*

Note.—Under "Description," when *in attendance* is added, it would be well to add "nurse," "wife," "mother," &c. &c., and the profession of informant. So also when "present at death." This concludes the information; the two other columns relate to the Registrar.

10. That the Registrar registered the said particulars on a given day—*5th February.*

11. Witness, his name and title, *John Cox, Registrar.*

It would tend very much to promote the accuracy of registration if every family kept a register of births, marriages, and deaths. The register in the Family Bible has often been found of great use, and the Family Register would be good corroborative evidence, although it would not, even when preserved, supersede the official register by a public officer.* I found on trial that in London many particulars respecting the great majority of the deceased, except in public institutions, are known to the people around them at death.† The following is one among many instances. It is a specimen of what I held then and still think would be a complete schedule. If it be ever adopted it will be necessary to pay the Registrar 1*s.* 6*d.* instead of 1*s.* 0*d.* an entry, and the Superintendent 3*d.* instead of 2*d.* for examination, as the labor will be increased. It is evident that the additional particulars as to birth-place, residence in district, parents' names, marriage, and issue would have the same value as some of the particulars now registered; they would depend on indirect evidence, and, if required, every year such evidence would increase in value:—

District, *Poplar.—William Canty, male, aged 62, died 28th February, at half past six o'clock a.m., at 16 Cottage Row, of pneumonia, 2 months, as certified by H. Bloomfield, M.D.; born in Cork, Ireland; 36 years in Poplar; father Timothy Canty, deceased, mother Mary Canty, maiden name Nicolas, deceased; married in Scrill parish, Ireland, at age 22, to Honora M'Carty; left issue Timothy, age 31, William 30, Mary 20, John deceased, age 27 in 1846, Catherine deceased, age 1 in 1820, Stephen 21;* witness, *Honora Canty* her × mark, *widow,* Informant; *Mary Canty, daughter,* witness; *T. W. Gagen,* Registrar, *March 3, 1847.*

I do not venture to complicate the proposal as to the medical registration certificate with these or any other alterations of the schedule and the Act, as I know that you are better able than I am to deal with such general improvements.

To secure the registration of the causes of death it would be necessary to alter some clauses of the Act (6 & 7 W. 4. c. 86.), and to insert a new clause to the following effect. It is slightly altered from the Registration Act for Ireland (26 Vict. c. 11. s. 46.)

"Medical Certificate of Death.

"Whereas it is expedient to establish an authentic registration of the "causes of death: Be it therefore enacted, the Registrar shall furnish from "time to time, *gratis,* to every duly qualified medical practitioner within "his district the necessary forms of certificates of death in the form (—) "hereunto annexed, which certificates the Registrar General shall cause "to be printed and forwarded from time to time to every Registrar for "that purpose; and the medical practitioner who shall have been in "attendance during the last illness and until the death of any person dying "after the 31st December 1866 shall within three days after the death of

* Entries in a family Bible are admissible in evidence in matters of pedigree; they are considered to derive credit from the circumstance of their being entered in a book which is kept as the ordinary register of families, and on account of their publicity in the family. (By Lord Ellenborough, C.J., and Lord Redesdale, C., in the Berkeley Peerage Case, 4 Camp. 421; and see other authorities cited in the text books on the Law of Evidence.)

† See Journal of Statistical Society, Vol. XI., pp. 282–5.

" such person transmit to the Registrar of the district in which the death " occurred, or deliver to the relatives of the deceased, or to a person " legally qualified to sign the Register as informant of the death, a certi- " ficate of the cause of death in the form mentioned, the particulars of " which shall be entered by the Registrar in the register. In case such " certificate shall not be so transmitted or delivered, the Registrar shall " give notice of the death to the registration medical officer, who " shall within two days after the receipt thereof return a certificate " duly filled up to such Registrar, who shall enter the particulars relating " to the cause of death in the proper column of the death register; pro- " vided that the registration medical officer shall, if he see fit, refuse to " give his certificate until an inquest has been held."

Certain amendments would be required in the Act to secure the complete registration of deaths. The task of giving notice of death to the Registrar, and in the case of deaths without medical attendance to the registration medical officer, should be enforced by penalty (see sect. 38. of 17 & 18 Vict. cap. 80., Scotch Act,) so as to make it the duty of the parties concerned to procure from the medical attendant, or in his default forthwith from the registration medical officer, the certificate of the cause of death authorizing the issue of the burial certificate by the Registrar. It is evident that if the body can be interred before the inquiry it will open a door to crime by rendering detection difficult if not impossible. The body is seen at once and is often buried in France on the second day; in England the people cling to the presence of their dead, and thus inquiry is easier. Decent dead-houses should be provided for poor families in towns.

Still-born children should be seen by the registration medical officer, whose certificate to the effect that they were still-born would authorize their burial without funeral rites. They would be entered in his books, and would not appear in the Registrar's accounts, which should embrace only all those born alive.

I. Zymotic Diseases: *Zymotici.*

The mortality by these diseases in the two years 1863–64 was much above the average of the three years preceding; it was nearly as high as in the year 1858, and the excess was chiefly due in the three years to the ravages of a great epidemic of scarlatina, coupled with diphtheria, which at its origin was confounded with malignant sore throat.

Scarlatina destroyed 29,700 lives in the year; 18,709 children under five years of age, 8,027 five and nearly ten years of age, while the remaining 2,964 were of higher ages.

Fever in its various continued forms [typhus, typhia (typhoid), and typhinia (relapsing fever)] was fatal to 20,106 persons, or to 9,971 males and to 10,135 females of all ages. The rate of mortality was a little above the average, or 9·77 deaths by fever to 10,000 persons living. By estimate 165,400 persons were attacked by fever, or 79·63 in every 10,000 of the population. It will be seen that this is the chief zymotic disease which attacks young men and women in the prime of life. (See Tables VI., VII., and VIII.)

Erysipelas became more fatal in the years 1862–63–64 in the proportions of 76, 94, and 102 deaths per million of population.

II. Constitutional Diseases: *Cachectici.*

These deaths are little liable to fluctuation. The decrease of deaths ascribed to dropsy, and the increase of deaths referred to cancer, in the last 15 years is probably due to the more general diffusion of medical knowledge, and to the increased proportion of certified deaths. 8117 deaths were ascribed to cancer, 7,386 to dropsy, in the last year. The total deaths from diseases of the diathetic order amounted to 17,392. The

tubercular order comprises 69,798 deaths ; 53,046 from phthisis, 5941 from tabes mesenterica, 7,700 from hydrocephalus, and 3,111 from scrofula.

III. Local Diseases : *Monorganici.*

Nearly every disease affects the whole organism directly or indirectly. But while inflammation is everywhere essentially the same pathological process, its effects in different organs where it is localized are very different. Inflammation of parts of the skin or of the limbs produces great disturbance of the functions but is not dangerous, while inflammation of the brain (cephalitis) is often fatal.

The brain diseases, including under that order all special affections of the brain, spinal marrow, and nerves, with their membranes,—these great organs of sense, volition, and motion,—killed 59,627, including 26,382 deaths, chiefly of infants from convulsions, 20,931 from apoplexy and paralysis.

22,419 persons died from affections of the heart and blood vessels.

Of all monorganic diseases those affecting the breathing organs are the most fatal ; of such affections 75,376 persons died in the year. This is an excess of 8,096 over the deaths by the same diseases in the previous year, and it is chiefly composed of deaths by bronchitis and asthma.

Phthisis and bronchitis in the chronic form are often confounded, but in phthisis there is a deposit of tubercles not only in the lungs but in other organs, and while the fatality of bronchitis is invariably influenced by a depression of temperature, the mortality by phthisis undergoes little variation. On etiological as well as pathological grounds the two diseases essentially differ, but in practice, unless their history is carefully traced, they are often confounded by persons not well skilled in diagnosis.

The deaths of this order with those by phthisis from Class II. amount to 128,422, or to more than one fourth part (·26) of the deaths from all causes.

The diseases of the digestive organs account for 20,969 of the deaths, including all affections of the stomach, intestines, and liver. Liver disease including jaundice counts for 8,083 in the deaths.

The diseases of other systems of organs are less fatal as their functions are distributed over an extensive apparatus which is seldom all affected at the same time, and is not in its entirety indispensable to life.

IV. Developmental Diseases : *Metamorphici.*

These diseases arise directly out of the processes of development, growth, and decay. They include malformations to which 1,297 deaths are referred, and premature birth, from undistinguished causes, either in the mother or the child. Teething is set down for 4,285 deaths.

The chief fatal causes of the class among women are 2,532 deaths from childbirth, besides 1,484 deaths of mothers from metria, often called puerperal fever. A pregnant woman is obnoxious to attacks of zymotic diseases, which is then frequently fatal ; or when labouring under some chronic disease, such as phthisis, she may become pregnant ; such deaths are referred to the fatal diseases in question. (See Table XV.) The usual mortality of mothers from childbearing is 5 deaths of mothers to every 1,000 children born alive.

29,634 deaths, chiefly of infants, are referred to atrophy and debility, the body wastes, and the forces fail without any apparent disease.

So it often is in the last stages of life, when 29,498 deaths fall from no discernible cause.

V.—Violent Deaths : *Thanatici.*

17,018 deaths are referred distinctly to external causes. The number of such deaths has increased to that number from 14,065 in the year 1855. The increase in the last two years is 2,074.

15,091 of the deaths are ascribable to accident or negligence, more or less culpable, sometimes of the victim and sometimes of third parties not amenable in the opinion of juries to criminal charges.

412 persons, including 192 infants under one year of age, died, in the opinion of coroners' juries, of homicide, either manslaughter or murder. The deaths of 110 males are murders, of 121 manslaughters; of females the proportions are very different, 138 and 43. The excess of manslaughters among males is in adults for obvious reasons.

1,340 suicides are so designated, and to these some of the 2,714 persons found drowned should probably be added. The iron regularity of the law of suicide is remarkable (see Table XIX.); but it must not be assumed that the tendency is uncontrollable.

21 criminals were executed; this is double the average number of executions in the four years 1858–61, and the increase is rather referable to the increase of murder than to any increase in the administration of the laws.

2,987 deaths by burns and scalds are recorded; 1,475 of males and 1,512 of females. The great difference in the two sexes at the ages 5–10 is due to the great inflammability of cotton dresses. It is gratifying to observe in the last year a great reduction in the mortality of both boys and girls by burns at this age. (See Table XX.)

The deaths by lightning nearly all occur out of doors, so it is not surprising that the flash struck men and women in the proportion of 5 to 1. The importance of avoiding the seduction of a shady isolated tree in a thunderstorm cannot be too much insisted on.

I have the honour to be,
Sir,
Your very obedient servant,
W. FARR.

To
The Registrar General.

TABLE I.—**Excess** or **Defect** of **Annual Rate** of **Mortality per Cent.** of **Males** and **Females** in **England** and **Wales** in the **Year 1864** over or under the **Mean Annual Mortality** of the **27 Years 1838–64.**

—	AGES.—MALES.												
	All Ages.	0–	5–	10–	15–	25–	35–	45–	55–	65–	75–	85–	95 & upwds.
Mean of 27 Years -	2·321	7·247	·893	·499	·793	·978	1·282	1·809	3·142	6·749	14·686	30·514	44·120
Year 1864 - - -	2·514	7·535	·993	·503	·780	1·075	1·493	1·901	3·385	7·756	15·413	34·340	53·246
Excess of 1864 -	·193	·288	·100	·004	–·013	·097	·211	·092	·243	1·007	·727	3·826	9·126

The Table may be read thus:—The Mortality per Cent. of Males in the Year 1864, under 5 Years of Age, exceeded the Mean Mortality per Cent. of 27 Years by ·193, while, on the contrary, at the age 15 and under 25 the Mortality in the Year 1864 was *less* than the Mean Mortaality of 27 Years by ·013; the deficiency being indicated by prefixing the minus sign thus (–·013).

—	AGES.—FEMALES.												
	All Ages.	0–	5–	10–	15–	25–	35–	45–	55–	65–	75–	85–	95 & upwds.
Mean of 27 Years -	2·149	6·247	·884	·518	·827	1·018	1·232	1·555	2·820	5·807	13·414	28·098	43·010

† Order 2, comprising Violent Deaths in Battle, is omitted, as inapplicable to the civil population.

‡ The number of persons executed in the several years will not necessarily correspond with those in the same years of the "Criminal Returns," inasmuch as the executions recorded in each year in the latter are derived from the dates of conviction, while the numbers in this Table are classed under the years in which the deaths are registered.

§ The cases of angina membranacea which would now be put to diphtheria were formerly classed under the same head as scarlatina, but were distinguished in the notes.

TABLE XI.—**Causes** of **Death** registered in **England** in each of the Ten **Years** **1855-1864**—*continued.*

† Up to the year 1857 cases of so called "debility" and "premature birth" were classed together; when the new classification was introduced "premature birth" was kept apart, and "debility" and "atrophy" were thrown into one line. This accounts for the changes in the table numbers.

TABLE XII.—**Causes of Death in England in 1864.** Proportional Numbers dying from each Class of Causes, and from each Cause.

Class.	CAUSES OF DEATH.	1864 Deaths to 1,000,000 *Persons living.*	1864 Proportional Number in 1,000,000 Deaths.

* The Mean Annual Mortality in the 15 years from All Causes and from Specified Causes is the mean of the three quinquennial periods, and does not correspond exactly with the totals of the Orders and Classes; because under certain heads, for example, *Homicide*, *Suicide*, and *Causes not specified*, &c., the result is derived from the deaths *not* of 15 years but only of portions of that period.

† Order 2, comprising Violent Deaths in Battle, is omitted, as inapplicable to the civil population.

‡ Mean of 5 years. § Mean of 7 years. ‖ Mean of 2 years. ¶ Mean of 10 years.

TABLE XIII.—**Mean Annual Rate** of **Mortality** during **Three Periods** of **Five Years**—*continued.*

INDEX OF DISTRICTS.

[The following Index furnishes a reference to the *Number* of each District in the topographical arrangement adopted in the Tables of Abstracts contained in the Report, the numbers running consecutively from 1 to 623.* In forming the alphabetical arrangement the principle is adopted of placing compound names in the order in which they are pronounced: thus, East Ashford will be found under the letter E, and *not* under A, as Ashford, East.]

For names of Towns, such as Chester, Leamington, Torquay, &c., which are not found in this "Index of Districts," see the "Index of Sub-districts" (page 213) *and "Index of certain Towns"* (page 223).

A

Aberayron, 596.
Abergavenny, 578 *a*.
Aberystwith, 597.
Abingdon, 123.
Alcester, 405.
Alderbury, 263.
Alnwick, 559.
Alresford, 113.
Alston, 564.
Alton, 114.
Altrincham, 454.
Alverstoke, 97.
Amersham, 148.
Amesbury, 262.
Ampthill, 181.
Andover, 118.
Anglesey, 623.
Ashborne, 447.
Ashby-de-la-Zouch, 414.
Ashton-under-Lyne, 474.
Askrigg, 537.
Aston, 395.
Atcham, 359.
Atherstone, 397.
Auckland, 542.
Axbridge, 324.
Axminster, 279.
Aylesbury, 151.
Aylsham, 232.

B

Bakewell, 449.
Bala, 616.
Banbury, 163.
Bangor, 621.
Barnet, 136.
Barnsley, 505.
Barnstaple, 295.
Barrow-on-Soar, 416.
Barton-upon-Irwell, 470.
Basford, 438.
Basingstoke, 116.
Bath, 326.
Battle, 77.
Beaminster, 277.
Bedale, 535.
Bedford, 179.
Bedminster, 328.
Bedwelty, 578 *b*.
Belford, 560.
Bellingham, 557.
Belper, 446.
Berkhampstead, 147.
Bermondsey, 28.
Berwick, 561.
Bethnal Green, 21.
Beverley, 518.
Bicester, 159.
Bideford, 297.
Biggleswade, 180.
Billericay, 199.
Billesdon, 410.
Bingham, 443.
Birkenhead, 460 *b*.
Birmingham, 394.
Bishop Stortford, 139.
Blaby, 411.
Blackburn, 480.
Blandford, 270.
Blean, 66.
Blofield, 237.
Blything, 225.
Bodmin, 304.
Bolton, 468.
Bootle, 572.
Bosmere, 220.
Boston, 425.
Bourn, 422.
Brackley, 164.
Bradfield, 126.
Bradford-on-Avon, 258.
Bradford (Yorkshire), 499.
Braintree, 208.
Bramham, 514 *b*.
Bramley, 500 *d*.
Brampton, 566.
Brecknock, 600.
Brentford, 134.
Bridge, 64.
Bridgend, 583.
Bridgnorth, 356.
Bridgwater, 316.
Bridlington, 524.
Bridport, 278.
Brighton, 85.
Bristol, 329.
Brixworth, 170.
Bromley, 49.
Bromsgrove, 392.
Bromyard, 350.
Buckingham, 154.
Builth, 599.
Burnley, 478.
Burton-upon-Trent, 375.
Bury, 469.
Bury St. Edmunds, 215.

C

Caistor, 432.
Calne, 254.
Camberwell, 33.
Cambridge, 187.
Camelford, 300.
Canterbury, 65.
Cardiff, 581 *a*.
Cardigan, 593.
Carlisle, 568.
Carmarthen, 589.
Carnarvon, 620.
Castleford, 504 *c*.
Castle Ward, 554.
Catherington, 111.
Caxton, 185.
Chapel-en-le-Frith, 450.
Chard, 318.
Cheadle, 373.
Chelmsford, 200.
Chelsea, 2.
Cheltenham, 344.
Chepstow, 576.
Chertsey, 38.
Chesterfield, 448.
Chester-le-Street, 548.
Chesterton, 186.
Chichester, 92.
Chippenham, 253.
Chipping Norton, 162.
Chipping Sodbury, 331.
Chorley, 481.
Chorlton, 471.
Christchurch, 101.
Church Stretton, 354.
Cirencester, 340.
Cleobury Mortimer, 355.
Clerkenwell, 15.
Clifton, 330.

* Thus, the number of Marriages in the Aberayron District may at once be ascertained by referring, in the "*Abstract of Marriages*," to the District numbered 596 (see page 24); and in like manner the number of Births and Deaths, of Deaths at different Ages, &c. will be found by referring to the same district number in the appropriate Tables.

Clitheroe, 479.
Clun, 353.
Clutton, 325.
Cockermouth, 570.
Colchester, 204.
Congleton, 457.
Conway, 622.
Cookham, 129.
Corwen, 615.
Cosford, 213.
Coventry, 400.
Cranbrook, 60.
Crediton, 292.
Crickhowell, 601.
Cricklade, 251.
Croydon, 46.
Cuckfield, 83.

D

Darlington, 540.
Dartford, 50.
Daventry, 169.
Depwade, 239.
Derby, 445.
Devizes, 256.
Dewsbury, 502.
Docking, 244.
Dolgelly, 617.
Doncaster, 510.
Dorchester, 275.
Dorking, 43.
Dover, 72.
Downham, 247.
Driffield, 523.
Droitwich, 391.
Droxford, 110.
Dudley, 382.
Dulverton, 313 *b*.
Dunmow, 209.
Durham, 545.
Dursley, 333.

E

Easington, 546.
Easingwold, 527.
East Ashford, 63.
Eastbourne, 78.
East Grinstead, 82.
Easthampstead, 130.
East London, 17.

INDEX OF SUB-DISTRICTS.

[In this alphabetical arrangement the principle is adopted of placing the Sub-Districts (or Registrars' Districts) having *compound names* in the order indicated by the usual pronunciation of those names; thus, East Grinstead will be found under the letter E, and not under G as "Grinstead, East;" St. James under the letter S, and not as "James, St." The number against each Sub-District, in the third column, refers to the order in which it appears in the arrangement of the Districts in the Tables of Abstracts; thus, Abbey Holme (569; 2) is the 2d Sub-District of the Wigton District, No. 569.]

A

Sub-District.	District.	No.
Abbey	Bath	326; 3
Abbey Holme	Wigton	569; 2
Abbots Bromley	Uttoxeter	374; 2

	Llanfyllin	Llansaintffraid	609; 2
Weston-super-Mare	Axbridge	Banwell	324; 3
Widnes	Prescot	Farnworth	463; 4

ALPHABETICAL INDEX

TO

REGISTRAR-GENERAL'S REPORT AND APPENDIX.

PAGE

ARMY; Strength and Mortality in the Army at home and abroad . . xl

AUSTRIA; Population, Marriages, Births and Deaths xxxviii

BANK of ENGLAND refuses to accept Death Certificates 180

BILLS OF MORTALITY; first commenced in London in the reign of Queen Elizabeth (1592) 176

first specified Deaths by Plague and by all other Diseases in the aggregate in 1603, and in 1629 the several Casualties were specified weekly 176

Graunt's Observations thereon, and description of the Mechanism by which the Information was obtained 176

value of them, demonstrated by Sydenham, Arbuthnot, and Heberden 177

enabled Simpson and Price to construct Life-Tables . . . 177

similar Bills were commenced in other English and Continental Cities, but were allowed to drop 177

appear to have lost public interest when the eruptions of the Plague ceased and the returns began to be irregularly made . . 177

contained no information about the population of the country . 177

BIRMINGHAM; no Medical Officer of Health; Vaccination greatly neglected . lvi–lxiii

BIRTHS to a marriage xx

fecundity of English and Scotch women xxi

registered in 1864 xxiv

of the two Sexes; their proportions xxv

in the four Seasons xxvi

of Illegitimate children xxvii

in March quarter 1864 xliv

in June „ „ xlviii

in September „ „ lii

in December „ „ lx

BIRTH-RATE in different parts of the Country xxiv

BLACKBURN; 300 persons attacked with Typhus in Sub-district of Oswaldtwistle in December quarter 1864 lxiv

BORDER-MARRIAGES . . . . . vii–viii

BRONCHITIS AND ASTHMA excessively fatal in 1864 192

BRONCHITIS AND SCARLATINA the chief causes of the excess in the rate of Mortality in 1864 175

BURIALS; Abstracts of Registers ordained in each Parish in the Reign of Queen Elizabeth 176

are publicly registered, but there is no identification of the Body, so in a large City anybody may be buried under any Name . 178

BURIALS—*continued.* PAGE

the Code Napoleon requires the Registrar (*Officier de l'état civil*) to see the body, and no interment can take place without his Certificate 178

prohibition of interment without Registrar's Certificate would obviate many evils in England 182

BURNS AND SCALDS; reduction in the mortality 193

CAUSES OF DEATH; Letter thereupon from William Farr, M.D., to the Registrar General 175

CAUSES OF DEATH; Registration of. (*See* REGISTRATION OF DEATHS.)

CERTIFIED and UNCERTIFIED Deaths; their proportions in 1858 have since undergone no essential change 175

CERTIFIED and UNCERTIFIED Deaths; London has the largest proportion of certified deaths and Yorkshire and Wales the least . . 175

CHILDREN BORN OUT OF WEDLOCK. (*See also* BIRTHS) xxvii

CONSTITUTIONAL DISEASES; little liable to fluctuation save in names, and this is accounted for by the more general diffusion of medical knowledge 191

CORONER'S INQUIRY; a protection to life, and oftentimes relieves the innocent from suspicion 176

improvement in the Coroners' returns 177

nature and limitation of the Inquiry 178

cost of Inquiry 187

COTTON FAMINE; Relief operations in the distressed Districts in March quarter 1864 xlv

DEAD-HOUSES; decent ones should be provided for poor families in towns . 191

DEATHS registered in 1864 xxviii

DEATHS, registration of. (*See* REGISTRATION OF DEATHS.)

DEATHS and STATE of the PUBLIC HEALTH in March quarter 1864 . . xlv

in June „ „ . . xlix

in September „ „ . . liii

in December „ „ . . lxii

DEATH-RATE above the average. (*See also* MORTALITY.) xxviii

DEVELOPMENTAL DISEASES; the chief fatal causes of the class are diseases consequent upon pregnancy and childbirth 192

DISTRICTS; changes in the constitution of, during 1864 172

index to 209–212

EDUCATION; advantages of the Scotch system of xviii

EMIGRATION in 1864 ii

in March quarter 1864 xliv

in June „ „ xlviii

in September „ „ lii

in December „ „ lx

ERYSIPELAS 191

ESSEX POISONINGS (1848); undetected in consequence of imperfect Registration 181

EXECUTIONS; increase referable rather to increase of murder than to increased rigour of the law 193

FAMILY REGISTERS; very useful as corroborative evidence in support of the official Registers 190

PAGE

FARR, WILLIAM, M.D.; Letter to the Registrar-General on the Causes of Death 175

FECUNDITY of English and Scotch women xxi

FEVER 191

FRANCE; Regulations concerning Marriage x
Population, Marriages, Births, and Deaths xxxvi
the Code Napoleon requires the Registrar to *see* the Body before he registers the Death 178
Female informants are rejected 186

FUNERALS; cost of, amongst different Classes 187

GLENDALE; a model District for low Rate of Mortality, but the Village of Lowick is in bad sanitary condition, and suffers heavily from Fever lvi

GRAUNT, JOHN; Observations on the London Bills of Mortality, and description of the mechanism by which the information was obtained 176

GRAVESTONES; cost of 188
endurance of 188

GREAT BRITAIN; Population, Marriages, Births, and Deaths . . . xxxv

GRETNA GREEN Marriages . . . . . vii–viii

ILLEGITIMATE BIRTHS; proportion in different Counties. (*See also* BIRTHS.) xxviii

INFORMANTS for Registration purposes, no restriction as to capacity, character, sex, or age 178
their qualifications 178
sex and capacity of, in certain Districts 179
no check on veracity of 180
instances where there is no legally qualified Informant . . 182
the French refuse Female Informants 186
majority of Informants in many Districts are ignorant women who sign the Registers with Marks; numbers and proportions of such Informants 186

INSPECTORS; suggested appointment of two additional Registration Inspectors to look after the Registration of Causes of Death, and the facts of cases where Informants sign the Register with Marks . 185

ITALY; Population, Marriages, Births, and Deaths xxxviii

LANCASHIRE; "The high Death-rate prevailing in Lancashire Towns has its main cause in the foul cottage cesspit." (Mr. Rawlinson's Report.) xlvii

LEGITIMATION *per subsequens matrimonium* admitted in almost every European nation save England; the English law the wisest . . . xxii

LIGHTNING, Deaths of Men and Women in the proportion of 5 to 1 . . 193

LIVERPOOL; prevalence of Typhus, Small-pox, Diarrhœa, and Scarlatina in December quarter 1864 lxiii
fictitious entries in Registers of Howard-street Sub-district (*see* 13th Annual Report, p. 294) 180

LOCAL DISEASES; different effect of disease in different organs . . . 192
Phthisis and Chronic Bronchitis often confounded; the difference between them 192

PAGE

LONDON; Health of, in 1864 lxiv
Area and distribution of people in North and South Districts in 1864 . . . . . lxiv–lxvi
proportions of the two Sexes in Births and Deaths in 1864 . . lxiv
excessive Death-rate in January 1864 lxv
prevalence of Typhus in 1864 . . . . . lxvi–lxviii
fatality of Typhus in London, Liverpool, and Manchester . . lxvii
its atmosphere of smoke and fog; its "mud-oceans" . . . lxvii–lxviii

MARRIAGE; a public ceremony ii
regulations as to presence of Registration Officers at the ceremony . ii
interval between giving Notice and the time of Marriage . . iii
by Superintendent Registrar's Licence and Certificate may take place either in a Register Office or in a registered place of Worship iv
in Superintendent Registrar's Offices; Districts in which they were most numerous v
in Superintendent Registrar's Office; sudden increase in Carlisle in 1857, consequent on passing of Act (19 & 20 Vict. c. 96.) stopping irregular Marriages . . . . . v–vii
at Gretna Green; reference to 13th Report (pp. vii–viii) wherein the evils of the system are adverted to vii
at Gretna Green and on the Border; number of entries on Registers vii
at Gretna Green and on the Border; Letter from Mr. Robert Forster of Longtown (8th March 1866) as to entries in Registers viii
by Banns; objection to, in Cumberland and other Counties . . viii
in Superintendent Registrars' Offices are in many cases not withdrawn from the Registers of the Established Church or from the Chapels of Nonconformity, but from the ranks of immorality viii
by Banns; publication is often very useful, but in large Cities is often inefficiently performed x
by Licence; the Licence has descended from the age of "indulgences" (25 Hen. 8. c. 21.) x
by Licence; the fee on a Licence a kind of fine for omitting usually recognized precautions x
by Licence unknown in Scotland; how regular Marriages may be solemnized x
regulations for Marriage in France x
fees for "cheap" Marriages about 12*s.*, and for "dear" Marriages about 64*s.*; numbers married under the two classes . . x
solemnized with and without religious rites by different Denominations xi
covenants of Marriage in Anglo Saxon times, and subsequently . xi–xiii
Act of Lord Hardwick (1752) made Church Rites indispensable . xii
Act of 1837 gave freedom of Marriage to Nonconformists . . xiii
relation between Price of Wheat and Marriages of higher and lower classes xiii
coincidence between the proportions of Marriages by Licence and the proportion of the Population living in Houses of the rent of 20*l.* and upwards in England and Wales xiii
high Prices of Wheat depress Marriage among those who marry by Banns and Certificate, but the effect on the Licences is rather the reverse xiv
proportion of Marriages of different Denominations in Scotland . xiv

MARRIAGE—*continued.* PAGE

of Roman Catholics would appear to show that the numbers of that Body in the United Kingdom are below the usual estimate xiv

difference in circumstances constituting validity of Marriage in England and Scotland xiv

less frequent in Scotland than in England xiv

vary amongst different classes in different seasons . . . xiv

greatest proportion of Marriages on Sunday and Monday . . xv

of Widowers and Widows xv

of Minors xvi

signatures of Registers a test of educational progress . . . xvi

fruitfulness of Marriage in England and Scotland . . . xx

irregular cohabitation of lower classes common in Scotland, and results frequently in Marriage if children are born; this encouraged by legitimation of pre-nuptial children . . xxiii

in March quarter 1864 xliv

in June „ „ xlvii

in September „ „ lii

in December „ „ lx

MARYLEBONE; fictitious entries in Registers of All Souls Sub-district (*see* 9th Annual Report, p. 177) 180

MEDICAL ATTENDANCE of the Population very deficient, yet it is believed to be better than in any other State of Europe 175

MEDICAL CERTIFICATE of Cause of Death; new Forms 183, 184

proposed clauses relating thereto 190

MERCHANT SEAMEN; Mortality of, at Sea xli

METEOROLOGY; its influence on the Public Health xxxiii

of March quarter 1864 xlv

of June „ „ xlviii

of September „ „; its influence on the Death-rate of this quarter in 1860 and 1864 . . liii–liv

of December Quarter 1864 lxi

MINORS, marriages of xvi

MORTALITY RATE; above the average in 1864 xxviii

of Town and Country Districts xxix

of the two Sexes xxx

in different places xxx

of Males and Females at different Ages xxxii

of the four Seasons and influence of Meteorology xxxiii

excessively high in March quarter 1864 xlv

formerly highest in England during summer, but sanitary measures have lessened the zymotic matter, and the cold weather is now most fatal xlvi

MURDER AND MANSLAUGHTER 193

NEATH; an example of prosperity nullified by the negligence of its inhabitants in sanitary matters lviii

NEWCASTLE-ON-TYNE; 521 *reported* STILL BORN Children have been interred in All Saints Cemetery in the last seven Years . . . lviii

NORFOLK POISONINGS (1846) undetected in consequence of imperfect registration 181

PAGE

PARISH REGISTERS; Abstracts of, established in the reign of Queen Elizabeth 176
antiquity and endurance of 188

PAUPERISM in March quarter 1864 xlv
in June „ „ xlviii
in September „ „ liii
in December „ „ lxi

PHTHISIS often confounded with chronic bronchitis 192

PLAGUES of the 16th century gave rise to the London Bills of mortality . 176

POPULATION; natural increase of, in 1864 i
increase of, in March quarter 1864 xliv
„ in June „ „ xlviii
„ in September „ „ lii
„ in December „ „ lx

PRESCOT; very high mortality and bad sanitary condition . . . lxiv

PRICES of Wheat, Meat, and Potatoes in March quarter 1864 . . . xlv
in June „ „ . . . xlviii
in September „ . . . liii
in December „ . . . lxi

QUARTERLY REPORTS; Summary of, for March quarter 1864 . . . xliv
for June „ „ . . . xlvii
for September „ „ . . . lii
for December „ „ . . . lix

RAINFALL; very defective in September quarter 1864; great scarcity of water in many places so that it sold for 1*d.* to 3*d.* per bucket . liii

REGISTERS AND SEARCHES; number of Names on Registers, and number of Searches xliii

REGISTRATION; progress of, in 1864 i

REGISTRATION OF DEATHS IN ENGLAND:
proportion of certified and uncertified Deaths which obtained in 1858, have undergone no essential change 175
the largest proportion of certified Deaths in London, and the smallest in Wales and Yorkshire 175
Causes of Death, two kinds of imperfection in the registration of, (1) due to the imperfection of medical science, and (2) to the imperfect practical application of existing science . . . 175
medical attendance of the population very deficient, yet it is believed to be better than that of any other State of Europe . . 175
thousands of Deaths occur without any scientific inquiry as to the cause 176
Coroners inquiry, a protection to life, and oftentimes relieves the innocent from suspicion 176
Causes of Death inquired into in the earliest dawn of English society, with a view to discovery and prevention . . . 176
plagues of the 16th century gave rise to the London bills of mortality 176
Abstracts of registers of burials, baptisms, and marriages in each parish established in the reign of Queen Elizabeth . . 176

REGISTRATION—*continued.* PAGE

Bills of mortality in London commenced in 1592 176

first specified deaths by plague and by all other diseases in the aggregate in 1603, and in 1629 the several casualties were specified weekly 176

Graunt's observations on the London bills, and description of the mechanism by which the information was obtained 176

value of them demonstrated by Sydenham, Arbuthnot, and Heberden 177

enabled Simpson and Price to construct Life Tables . 177

similar bills were commenced in other English and continental cities, but were allowed to drop . . . 177

appear to have lost public interest when the eruptions of the plague ceased, and the returns began to be irregularly made 177

contained no information about the population of the country 177

Causes of death, provision made for inquiry into, in Registration Act of 1837 177

the co-operation of the medical profession has greatly facilitated the inquiry 177

improvement in coroners' returns 177

inquiry has worked so satisfactorily as to justify further efforts to make it as complete as possible . . 178

Coroner's inquiry, its nature and limitation 178

burials are publicly registered, but there is no identification of the body, so in a large city anybody may be buried under any name 178

in France the registrar is bound under the Code Napoleon to see the body and to register the death on the information of two men of full age, and no interment can take place without the registrar's certificate 178

the registration law on the continent requires the registrar or the inspector of the dead (*Todbeschauer*) to see the body . . 178

in England a death may be registered upon the information of a person present at the death, or in attendance during the last illnesss of the deceased 178

no restriction of informants, as to capacity, character, sex, or age . 178

qualifications of informants 178

sex and capacity of informants in certain districts . . . 179

registration performed without expense to the parties interested, and with little trouble and expense to the public 179

defects of present system of registration 179

certified copy of entry sealed at the General Register Office, made legal evidence of death by the Registration Act . . . 179

possibility of imposition 179

refusal of the Bank of England to accept death certificates . . 180

checks on registration officers as to handwriting and form of entry, but no check on accuracy of record or on veracity of informant 180

fictitious entries in Marylebone, South Shields, Liverpool, and Howden 180

wilful falsifications of entries comparatively insignificant . . 181

incomplete Registration gives imperfect security against Murder, &c., as was instanced in the Essex and Norfolk poisonings . 181

inefficacy of the Notice of Burial from Officiating Minister to Registrar especially in large Districts and in Towns . . 181

REGISTRATION—*continued.* PAGE

still-born, unregistered 182

many evils would be obviated by forbidding the burial of any body without the Registrar's Certificate 182

instances where there is no legally qualified Informant for Registration 182

present cost of Registration 182

an extension of the system of Medical Certificates would remedy the prevailing defects 182

certificates of medical attendants should still be received, *provided they have seen the deceased on the day of death, or have seen the body subsequently for identification* 182

a Registration Medical Officer should be appointed in every District whose duty it would be to investigate all cases of uncertified Deaths 183

new Forms of Medical Certificate 183–184

under this new arrangement every body would be identified before burial, life would become more secure, frauds of Registrars and mistakes of Informants would be less common, and the certified copy of an entry would not be, as at present, imperfect evidence of Death 184

the Registration Medical Officer would be found a most useful functionary all over the country, and might with advantage be appointed the Health Officer of his District 185

Advisability of appointing an Inspector to make periodical inquiries into the actual facts of cases where Informants sign the Register with Marks, and also a Medical Inspector to look after the Registration of Causes of Death generally 185

the Registration Medical Officer not to supersede the family physician in certifying the cause of death 186

the French principle of refusing Female Informants inapplicable to England 186

Majority of Informants in many Districts are ignorant women who sign the Registers with Marks; numbers and proportions of such Informants 186

cost of improved system of Registration as compared with present system 187

cost of Coroners' Inquiries 187

cost of Funerals of different classes 187

cost of Gravestones 188

endurance of Gravestones and of Registers 188

antiquity of Parish Registers 188

testimony in favour of English work and workmen by Professor Achenwall 189

analysis of particulars of which evidence is found in the Death Registers 189

Family Registers of Births, Marriages, and Deaths very useful as corroborative evidence of the Official Registers 190

instance of particulars required to make a complete public Register 190

proposed Clauses relating to Medical Certificate of Death, &c. . 190

decent dead-houses should be provided for poor families in Towns . 191

still-born children should be seen by the Registration Medical Officer, whose Certificate would authorize their burial without funeral rites; they should be entered in his books, and not in the Registers, which should embrace all those born alive . 191

REGISTRATION MEDICAL OFFICER; suggested appointment of . . . 183

his duties 183–184

not to supersede the family physician in certifying the cause of death 186

PAGE

RE-MARRIAGES xv

ROMAN CATHOLICS; if the marriage returns of Ireland are complete the number of Catholics in the United Kingdom would appear to be below the usual estimate xiv

SCARLATINA; very prevalent throughout the southern districts of the country in September quarter 1864 lv
deaths from, in 1864 191

SCARLATINA AND BRONCHITIS; the chief causes of the excess in the rate of mortality in 1864 175

SCOTLAND; marriages by licence unknown; how regular marriages may be solemnized x
proportion of marriages in different religious denominations . . xiv
difference in circumstances constituting validity of marriage in Scotland and England xiv
marriage less frequent than in England xiv
larger proportion write their names than in England . . . xvii
advantages of the Scotch system of Education xviii
fruitfulness of marriage in xx
fecundity of Scotch and English women xxi
irregular cohabitation of lower classes is common, and results frequently in marriage if children are born xxiii

SEA; Births and Deaths of British Subjects at xli
Mortality of Merchant Seamen at Sea xli

SEARCHES; number of xliii

SEASONS AND METEOROLOGY; influence of, on Public Health . . . xxxiii

SIGNATURE OF MARRIAGE REGISTERS xiv
in Scotland; larger proportion write their names than in England . xvi

SOUTH SHIELDS; fictitious entries in Registers (*see* 9th Annual Report, p. 239) 180

SPAIN; Population, Births, and Deaths xxxix

STILL BORN; 521 interments of *reported* still-born children in All Saints Cemetery at Newcastle-upon-Tyne within 7 Years . . lviii
not registered at all, and are buried with little difficulty . . 182
should be seen by the Registration Medical Officer, whose Certificate should authorize their Burial without funeral rites; they should be entered in his books, and not in the Registers, which should embrace all those born alive 191

SUB-DISTRICTS; index to 213–222

SUICIDE; remarkable regularity of the law of occurrence 193

TOWN AND COUNTRY DISTRICTS, rate of mortality xxix

TOWNS; index to certain Towns whose names differ from that of the District and Sub-district in which they are respectively situated . . 223

ULVERSTON; once a very healthy district, but with increased prosperity has now a high death-rate 1

VIOLENT DEATHS; increase in the number since 1855 192
Murder and Manslaughter 193
Suicides, remarkable regularity of the law of their occurrence . 193

VIOLENT DEATHS—*continued.* PAGE

Executions, increase referable rather to increase of murder than to increased rigour of the law 193

Burns and Scalds, reduction of mortality 193

Lightning; deaths of men and women by, in the proportion of 5 to 1 193

WATERING PLACES in England; generally on good sites, but in many cases defective drainage nullifies that advantage li

YORKSHIRE; increase in rate of Mortality in June quarter 1864 . . 1

ZYMOTIC DISEASES; mortality by these Diseases in the two years 1863–64 much above the average of the three years preceding . . 191

Scarlatina 191

Fever 191

Erysipelas 191

ALPHABETICAL INDEX

TO

TABLES AND ABSTRACTS IN REPORT AND APPENDIX.

PAGE

Ages of 234,880 Persons married in 1864, distinguishing Bachelors, Spinsters, Widowers, Widows 26–27

Deaths of Males and Females at different Ages registered in 1864 in Divisions, Counties, and Districts 98–119

Causes of Death of Males and Females in England at different periods of Life, in 1864 120–125

Supplementary Table of Causes of Death of Males and Females in England at different periods of Life, in 1864 . . . 126–129

Causes of Death of Males and Females in London, at different periods of Life, in 1864 130–135

Army; Annual Rate of Mortality per cent. in Great Britain, England, France, and Austria and Italy, including the Deaths of Soldiers *at Home and Abroad*, 1857–64. (Table XXVII.) . . xxxviii

Average Strength of the British Army Abroad in each of the Years 1861–64. (Table XXVIII.) xxxviii

Number of Deaths in the British Army at Home and Abroad, 1861–64. (Table XXX.) xxxix

Annual Rate of Mortality per cent. amongst Officers and Men in the Army Abroad, 1858–64. (Table XXXI.) xxxix

Strength at Home and Abroad in 1861, showing the Numbers born in the different parts of the United Kingdom and elsewhere. (Table XXXII.) xl

Deaths in Army Abroad of Officers and Men belonging to England and Wales and to Great Britain, 1858–64. (Table XXXIII.) xl

Austria; Estimated Population in middle of the Years 1853–64. (Table XXIV.) xxxvi

Number, and Proportion per cent. to Population, of Marriages, Births, and Deaths, in each of the Years 1853–64. (Table XXV.) . xxxvii

Annual Rate of Mortality per cent. in the Austrian Army, 1857–64. (Table XXXIV.) xl

Births registered in England, in each Year, 1838–1864. (Table I.) . i

Proportion to Population in each Year, 1838–64. (Table II.) . ii

Legitimate and Illegitimate; registered in each Year 1856–60 in England. (Table VIII *f.*) xviii

Legitimate and Illegitimate; registered in each Year 1856–60 in Scotland. (Table VIII *f.*) xviii

Legitimate and Illegitimate in England in the Years 1845–64. (Table IX.) xxiv

in Counties, in 1864. Numbers, Legitimate and Illegitimate, of the two Sexes; Proportions of Male to Female Births, Legitimate and Illegitimate; Proportion of Illegitimate Births to Total Births. (Table X.) xxv

Proportional Number of Births in each Quarter to 1,000 Births in the average Quarter, 1838–64. (Table XII.) xxvii

BIRTHS—*continued.* PAGE

registered in England in each Quarter of the Years 1838–64. (Table XIII.) xxvii

registered in each of the Divisions, Counties, Districts, and Sub-districts in 1864 28–82

Excess over Deaths in each of the Divisions, Counties, Districts, and Sub-districts in 1864 28–82

registered in the Divisions and Counties (distinguishing Males and Females) in each of the Four Quarters of 1864 86–89

of Children born out of Wedlock registered in the Divisions and Counties (distinguishing Males and Females) in each of the Four Quarters of 1864 90–93

BIRTH-RATE in Counties in each of the Years 1854–64. (Table XI.) . xxvi

in each Quarter of the Years 1838–64. (Table XXI.) . . xxxv

BURNS AND SCALDS; Deaths and Mortality at different Ages, in the Years 1848–64. (Table XX.—App.) 208

CAUSES of DEATH of Males and Females in England, at different Periods of Life, in 1864 120–125

Supplementary Table of Causes of Death of Males and Females in England at different Periods of Life, in 1864 126–129

Causes of Death of Males and Females in London at different Periods of Life, in 1864 130–135

Causes of Death of Males and Females in England, and in each of the Divisions and Counties, in 1864 136–159

Deaths from several Causes in 1864, in the Divisions, Counties, and Districts of England 160–171

registered in England in each of the Ten Years 1855–64. (Table XI.—App.) 198–200

Proportional Numbers dying from each Cause in 1864. (Table XII. App.) 201

Mean Annual Rate of Mortality from different Causes during 15 Years, 1850–64. (Table XIII.—App.) 202–203

in England, in 1864, arranged in the order of Mortality. (Table XIV. App.) 204

CHILDBIRTH; Deaths in 1864, at different Ages, of Women after Child-bearing, classed under different Diseases, and neither referred to Childbirth nor to Metria in the Abstracts. (Table XV.—App.) 205

Deaths of Women from Metria and Childbirth in the 18 Years, 1847–64, and proportional Deaths of Mothers to Children born alive. (Table XVI.—App.) 206

CYNANCHE MALIGNA and DIPHTHERIA; Deaths in England at different Ages in each of the 10 Years, 1855–64 (Tables II. and III. App.) . 194

DEATHS registered in England in each Year, 1838–1864. (Table I.) . . i

Proportion to Population in each Year, 1838–64. (Table II.) . ii

registered in England in each Quarter of the Years, 1838–64. (Table XIII.) xxvii

Proportional Number in each Quarter to 1,000 Deaths in the average Quarter, 1838–64. (Table XX.) xxxiv

registered in each of the Divisions, Counties, Districts, and Sub-districts in 1864 28–82

in 1864 in the principal Public Institutions in London . . . 83–84

registered in each of the Four Quarters of 1864 (distinguishing Males and Females), in Divisions and Counties 94–97

of Males and Females at different Ages registered in 1864 in Divisions, Counties, and Districts 98–119

DEATHS FROM DIFFERENT CAUSES (*See* CAUSES OF DEATH). . . .

DEATH-RATE of Males and Females in each of the Years 1838–64. Table (XIV.) xxviii

in Counties in each of the Years 1854–64. (Table XV.) . . xxix

in each Quarter of the Years 1838–64. (Table XXI.) . . xxxv

See also MORTALITY RATE.

DIPHTHERIA and CYNANCHE MALIGNA; Deaths in England at different Ages in each of the 10 Years 1855–64. (Tables II. and III. App.) . 194

DISEASES (*See* CAUSES OF DEATH).

DISTRICTS: Changes in the Constitution of, during 1864 172

DIVISIONS of England: Average Annual Rate of Mortality in the 11 Divisions in the 10 Years, 1851–60, and in the Four Quarters of 1864. (Table 6.) lxiv

ENGLAND AND WALES; Estimated Population of both Sexes in the middle of each of the Years 1801–1866 (*excluding Army, Navy, and Merchant Seamen Abroad*). lxx

ERYSIPELAS; Deaths at different Ages in England in the Years 1862–64. (Table X. App.) 197

FECUNDITY of English and Scotch Women aged 20–40 in the Years 1856–60. (Table VIII*g*.) xix

of English and Scotch Women aged 15–55 in the Years 1856–60. (Table VIII*i*.) xxii

FEVER; Ages of the Persons who died from Fever (Typhus, Typhia, and Typhinia) in the Year 1864. (Table VI. App.) . . . 196

Deaths in England at different Ages from Fever, in the 17 Years, 1848–64; and Annual Rate of Mortality. (Table VII. App.) 196

Annual Number of Estimated Cases, and of Deaths at different Ages, in the 17 Years, 1848–64. (Table VIII. App.) . . . 196

Deaths registered, Mortality, and Proportional Number to 1,000 Deaths in each of the 15 Years, 1850–64. (Table IX. App.) . 197

FRANCE; Estimated Population in middle of the Years 1853–64. (Table XXIV.) xxxvi

Number, and Proportion per cent. to Population, of Marriages, Births, and Deaths, in each of the Years 1853–64. (Table XXV.) . xxxvii

GREAT BRITAIN; Area, Estimated Population, Marriages, Births, and Deaths in 1864. (Table XXII.) xxxv

Proportion per cent. of Marriages, Births, and Deaths to Population in 1864. (Table XXIII.) xxxvi

ILLEGITIMATE BIRTHS registered in each of the Divisions, Counties, Districts, and Sub-districts in 1864 28–82

registered in the Divisions and Counties (distinguishing Males and Females) in each of the Four Quarters of 1864 . . . 90–93

(*See also* BIRTHS.)

INSTITUTIONS; Deaths in 1864 in the principal Public Institutions of London 83–84

IRELAND; Estimated Population of both Sexes in the middle of each of the Years 1801–1866 (*excluding Army, Navy, and Merchant Seamen Abroad*). lxxi

ITALY; Population, Number, and Proportion per cent. to Population, of Marriages, Births, and Deaths, in each of the Years 1862–64. (Table XXVI.) xxxviii

PAGE

LIGHTNING; Deaths in different Districts in each of the 4 Years, 1861–64. (Table XXI. App.) 208

LONDON; Births and Deaths, and Rate of Mortality, 1852–64. (Table 7.) . lxv

Deaths in Public Institutions, 1855–64. (Table 8.) . . . lxvii

Deaths and Meteorology, 1849–64. (Table 9.) lxviii

Deaths in 1864 in the principal Public Institutions . . . 83–84

Causes of Death of Males and Females at different Periods of Life in 1864 130–135

MARRIAGES registered in England in each Year, 1838–64. (Table I.) . i

Proportion to Population in each Year, 1838–64. (Table II.) . ii

registered in England in each Year, 1841 to 1864, in Established Church and amongst Nonconformists; showing also the Condition of Persons married. (Table III.) iii

in England in each Year, 1841–1864. Proportions by Licence and Banns; Proportions of Persons married who live in £20 Houses; price of wheat per quarter. (Table IV.) . . iv

in England in each Year, 1841–1864; proportion of Minors; of those who signed with Marks; of Widowers and Widows. (Table V.) v

in Counties of England in 1864; proportion of Marriages to population; of those who signed in Writing, of Minors, and of Re-marriages, to Total Marriages. (Table VI.) . . . vi

in England; Number and Annual rate per cent. in each Quarter of the years 1838–64. (Table VII.) vii

Number of Buildings registered for the solemnization of Marriages in the Divisions and Counties of England, and on the Register, on 31st December 1864. (Table VIII.) ix

in England in 1864; numbers and proportion of "cheap" and "dear" marriages. (Table VIII *a.*) xi

in Counties of England in 1864; proportions by Licence and Certificate. (Table VIII *b.*) xii

in certain Districts of England on each Day of the week in 1864. (Table VIII *c.*) xiv

in Scotland in 1862; proportion by different rites to the population xiv

in Scotland; proportion of Men and Women who signed the register in Writing in the Divisions of Scotland in 1862. (Table VIII *d.*) xvi

in Counties of England in 1864; proportion of Men and Women who signed the register in Writing. Arranged in progressive order of educational ability. (Table VIII *e.*) . . . xvii

Registered in England in each of the Divisions, Counties, and Districts in 1864; distinguishing those according and those *not* according to the Rites of the Established Church; and distinguishing also Persons married according to their conjugal Condition, Minority, and Signature of the Register by marks . 2–25

Ages of 234,880 Persons married in 1864, distinguishing Bachelors, Spinsters, Widowers, Widows 26–27

Births and Deaths Registered in each of the Divisions, Counties, and Districts in 1864; also Births and Deaths and Excess of Births over Deaths in each of the Sub-districts of England; distinguishing the Sexes and Illegitimate Births throughout . 28–82

METEOROLOGY of different parts of the Country in the year 1864. By James Glaisher, Esq., F.R.S. (Tables 3 & 4.) . . . . lviii–lxi

of Greenwich 1849–64. (Table 5.) . . . . . lxii–lxiii

METRIA. (*See* CHILDBIRTH.)

PAGE

MORTALITY per cent. at different Ages of Males and Females in each of the years 1838–64. (Tables XVI., XVII., XVIII., XIX.) . . xxx–xxxiii

Excess or Defect of Annual Rate of Mortality per cent. of Males and Females at different ages in the year 1864, over or under the Mean Annual Mortality of the 27 years 1838–64. (Table I.—App.) 194

Mean Annual Rate from different Causes during 15 years 1850–64. (Table XIII.—App.) 202–203
(*See also* DEATH-RATE.)

MURDER and MANSLAUGHTER; Deaths of Males and Females at different Ages returned at Inquests in the year 1864. (Tables XVII–XVIII.—App.) 206–207

PAUPERISM in each Quarter of the years 1857–64. (Table 2.) . . . lvii

POPULATION of England estimated to the middle of each of the years 1838–1864. (Table I.) i

of United Kingdom in the middle of each of the years 1801–66. lxx

PRICES; Quarterly Table of Prices of Consols, Wheat, Meat, and Potatoes, 1856–64. (Table 2.) lvii

PUBLIC INSTITUTIONS. (*See* INSTITUTIONS.)

REGISTERS; Aggregate Number of Names on the Registers at the end of each Year, 1837–64, (Table XXXVII.) xlii

SCARLATINA, CYNANCHE MALIGNA, and DIPHTHERIA; Deaths in England in each of the Years 1855–64. (Table II.—App.) . . 195

SCARLATINA; Deaths in England at different Ages in each of the 10 Years, 1855–64. (Table IV.—App.) 195

Deaths in each of the Counties of England and Wales in each of the Years 1847–1864. (Table V.—App.) 195

SCOTLAND; Proportion of Marriages by different Rites in 1862 to the Population - - - - - - - - xiv

Proportion of Men and Women who signed the Marriage Register in Writing, in the Divisions of Scotland, in 1862 (Table VIII *d.*) - - - - - - - xvi

Fecundity of Women aged 15–55, and 20–40, in the Years 1856–60 (Tables VIII *g.* and VIII *i.*) - - - - - xix–xxii

Area, Estimated Population, Marriages, Births and Deaths in 1864. (Table XXII.) xxxv

Proportion per cent. of Marriages, Births and Deaths to Population in 1864. (Table XXIII.) xxxvi

Estimated Population of both Sexes in the middle of each of the Years 1801–1866 (*excluding Army, Navy, and Merchant Seamen Abroad*). lxxi

SEA; Births and Deaths of British Subjects at Sea, 1856–64. (Table XXXV.) xli

Mortality of Merchant Seamen at Sea, 1852–64. (Table XXXVI.) xlii

SEARCHES; Number of Searches for Registers at the Central Office, 1843–64. Table XXXVII. xlii

SPAIN; Population, Numbers and Proportions per cent. of Births and Deaths in each of the Years 1861–64. (Table XXIX.) . . . xxxix

SUICIDES; Proportion to every 1,000,000 of the Population of England, 1858–64. (Table XIX.—App.) 207

TOWN AND COUNTRY DISTRICTS; Area; Population 1851 and 1861; Annual Rate of Mortality per cent. in each Quarter of the Years 1854–64. (Table I.) lvi

TYPHUS, TYPHIA, TYPHINIA. (*See* FEVER.)

PAGE

UNITED KINGDOM; Population of both Sexes (*including Army, Navy, and Merchant Seamen Abroad*) in the middle of the Years 1801, 1811, 1821, 1831, 1841, 1851, 1861, and 1866, and the Logarithms of the same lxix

Estimated Population of both Sexes, distinguishing England, Scotland, and Ireland, in the middle of each of the Years 1801–1866 (*excluding the Army, Navy, and Merchant Seamen Abroad*) . lxx–lxxi

WATERING PLACES; Mortality in Districts containing some of the principal English Watering Places in the 10 Years, 1851–60, and in the 3 months ending 30th June 1864 li

WOMEN married and unmarried; Estimated numbers living, aged 20–40, in each Year 1856–60 in England. (Table VIII *f.*) . . . xviii

married and unmarried; Estimated numbers living, aged 15–55, in each Year 1856–60 in England. (Table VIII *h.*) . . . xx

Estimated numbers living, aged 20–40, in each Year 1856–60 in Scotland. (Table VIII *f.*) xviii

Estimated numbers living, aged 15–55, in each Year 1856–60 in Scotland. (Table VIII *h.*) xx

aged 15–55 (Wives, Spinsters and Widows) living in England and Scotland, and proportions of married and unmarried Women . xx
